eVIN is a path-breaking technological innovation that aims to ensure equity through efficient distribution and timely availability of vaccines to all children. The mobile and web based application is being implemented by the Ministry of Health & Family Welfare and supported by the United Nations Development Programme.

eVIN enables real-time visibility of vaccine cold chain logistics by digitizing stock supplies and storage temperature across vaccine cold chain points in India, home to the world’s largest birth cohort of over 27 million.
WHAT eVIN DOES

**improves**
efficiency of vaccine cold chain logistics management by introduction of state-of-the-art technology for digitizing vaccine stocks

**strengthens**
the immunization system by deploying trained human resources in every district for constant support to estimate vaccine requirements and provide supportive supervision

**develops**
standard operating procedures for systematic record-keeping of vaccine logistics under the guidance of MoHFW

**ensures**
quality and safety of vaccines through real-time information on storage temperature with the help of SIM-enabled temperature loggers

**facilitates**
maintenance of optimum vaccine stocks by reducing instances of vaccine wastage and stock-out

**empowers**
the vaccine cold chain handlers at all health centres through intensive training on eVIN

**informs**
policy and decision-making for immunization supply chain management at all levels

WHAT WE HAVE ACCOMPLISHED SO FAR

All vaccine inventories digitized at over 10,500 cold chain points across 370 districts in 12 states in India

Nearly 700 comprehensive training programmes on eVIN conducted for more than 17,000 cold chain handlers and vaccine store managers

Over 2 million online transactions being made on eVIN every month recording vaccine issues, receipts, discards and transfers

More than 6,700 temperature loggers installed for remote temperature monitoring of all cold chain equipment
