MCloud® – GOVERNMENTAL SHARED TECHNOLOGICAL PLATFORM
OPEN CONTRACTING

IURIE TURCANU
Government CIO

CHIŞINĂU
24th SEPTEMBER, 2015
Open contracting refers to norms and practices for increased disclosure and participation in public contracting including tendering, performance and completion.
The goal is to make all government contracting open by default, to increase disclosure and participation in all stages of public contracting, from the pre-award of a contract through to its implementation.
WHY OPEN CONTRACTING?

1. Better value for money

2. Improved service delivery

3. Enhanced opportunities for businesses

4. Deterring fraud and corruption
• Mission of the Open Contracting Data Standard team in March 2015, in order conduct an assessment of the existing public procurement system against Open Contracting Principles and Data Standard.

• Meetings with several institutions that expressed their interest in piloting OCDS, meaning: the Public Procurement Agency, Ministry of Transportation and Road infrastructure, The State Road Administration, Ministry of Health, Medicine Agency.

• After the visit in Moldova, the OCDS team elaborated a Open Contracting Assessment, by presenting their findings and recommendations on three dimensions: legal framework; Timeliness, usefulness, and completeness of information; Stakeholder engagement and effective data use.
• Working on two dimensions, disclosure and participation:
  - the piloting institutions delegated open contracting coordinators
  - a list of CSOs that previously expressed their interest in participation was shortlisted;

• A MoU will be signed by the public institutions involved in piloting this initiative

• A kick-off meeting is being prepared together with the OCDS team, to take place at the end of October.
THANK YOU!
