ABOUT THE GLOBAL COMMISSION ON HIV AND THE LAW ................................................................. 3

PREFACE .............................................................................................................................................. 4

Acknowledgments ............................................................................................................................ 5

Abbreviations ................................................................................................................................... 6

EXECUTIVE SUMMARY ..................................................................................................................... 7

INTRODUCTION: CAN LAWS SAVE LIVES? .................................................................................... 11

CHAPTER 1: AGAINST DISCRIMINATION: HEALTH AND DIGNITY THROUGH LAW ....................... 15

CHAPTER 2: PUNISHING VULNERABILITY: CRIMINALISATION OF HIV TRANSMISSION, EXPOSURE AND NON-DISCLOSURE ........................................................................... 20

CHAPTER 3: RISK + STIGMA: KEY POPULATIONS. ......................................................................... 26

3.1 PEOPLE WHO USE DRUGS ...................................................................................................... 29

3.2 SEX WORKERS ......................................................................................................................... 36

3.3 MEN WHO HAVE SEX WITH MEN .......................................................................................... 44

3.4 TRANSGENDER PERSONS ....................................................................................................... 51

3.5 PRISONERS .............................................................................................................................. 55

3.6 MIGRANTS ............................................................................................................................... 59

CHAPTER 4: GENDER AND DISEMPOWERMENT: WOMEN .............................................................. 62

CHAPTER 5: THEIR WHOLE LIVES TO LIVE: CHILDREN AND YOUTH ........................................... 70

CHAPTER 6: MEDICINES FOR WHOM? INTELLECTUAL PROPERTY LAW AND THE GLOBAL FIGHT FOR TREATMENT ......................................................................................... 76

CONCLUSION ...................................................................................................................................... 88

Annex I: Commission Terms of Reference ...................................................................................... 90

Annex II: Commissioner Biographies .............................................................................................. 92

Annex IV: Summary of Recommendations ................................................................................... 97

ENDNOTES ......................................................................................................................................... 106
The Global Commission on HIV and the Law consisted of fourteen distinguished individuals who advocate on issues of HIV, public health, law and development. Fernando Henrique Cardoso, former president of Brazil, chaired the Commission.

The Commission’s unique convening power allowed it to focus on high-impact issues of HIV and the law, which have important ramifications for global health and development. The Commission advocated for evidence and human rights based legal environments for effective and efficient HIV responses.

The life experiences of the Commissioners gave them a formidable ability to access a wide cross-section of society. This means they are well placed to influence change on complex issues that require the engagement of multiple stakeholders across a range of sectors.

“HIV and the Law: Risks, Rights & Health” is the Commission’s flagship publication. Released in July 2012, the report presents public health, human rights and legal analysis and makes recommendations for law and policy makers, civil society, development partners and private sector actors involved in crafting a sustainable global response to HIV.
The end of the global AIDS epidemic is within our reach. This will only be possible if science and action are accompanied by a tangible commitment to respecting human dignity and ending injustice.

Law prohibits or permits specific behaviours, and in so doing, it shapes politics, economics and society. The law can be a human good that makes a material difference in people’s lives. It is therefore not surprising that law has the power to bridge the gap between vulnerability and resilience to HIV.

We came together as a group of individuals from diverse backgrounds, experiences and continents to examine the role of the law in effective HIV responses. What we share is our abiding commitment to public health and social justice. We have listened with humility to hundreds of accounts describing the effects of law on HIV. In many instances, we have been overwhelmed by how archaic, insensitive laws are violating human rights, challenging rational public health responses and eroding social fabric. At other times, we have been moved by those who demonstrate courage and conviction to protect those most vulnerable in our societies.

Many would say that the law can be complex and challenging and is best left alone. Our experience during this Commission has shown us a very different perspective. We have been encouraged by how frank and constructive dialogue on controversial issues can sometimes quickly lead to progressive law reform, the effective defence of legislation or better enforcement of existing laws. Even in environments where formal legal change is a slow and arduous process, we have witnessed countries taking action to strengthen access to justice and challenge stigma and discrimination.

As we listened and learned over the past eighteen months, many of us found our perspectives and opinions changing on a range of complex issues. Ultimately, we chose to be guided in our final recommendations by the courage and humanity of those who have died of AIDS and the thirty four million strong who live on with HIV.

This report presents persuasive evidence and recommendations that can save lives, save money and help end the AIDS epidemic. The recommendations appeal to what is common to all our cultures and communities—the innate humanity of recognising and respecting the inherent worth and dignity of all individuals. This report may make a great many people uncomfortable—hopefully uncomfortable enough to take action. Undoubtedly, different countries will prioritise different recommendations. Each country needs to develop its own road map for reform, depending on its legal and political environment. Nevertheless, we are confident that all of the recommendations are relevant in every country of the world, given that the drivers of the HIV epidemic exist all over the world. The time has come to act on these recommendations. We cannot continue to let people suffer and die because of inequality, ignorance, intolerance and indifference. The cost of inaction is simply too high.

Fernando Henrique Cardoso
Chair, Global Commission on HIV and the Law
The Global Commission on HIV and the Law is an independent body, established at the request of the Programme Coordinating Board of the Joint United Nations Programme on HIV/AIDS (UNAIDS) and supported by a Secretariat based at the United Nations Development Programme (UNDP). This report reflects the views and conclusions of the Commission, as well as its recommendations to countries, civil society actors, the private sector and the United Nations.

First and foremost, the Commission expresses its gratitude to the 1000 plus individuals who made written and oral submissions and who shared their knowledge and experience with such generosity. This report pays tribute to their courage and humanity in seeking a world that is fundamentally more just.

The Commission would like to express its appreciation for the leadership of Helen Clark (Administrator, UNDP) and Michel Sidibé (Executive Director, UNAIDS).

The Commission warmly acknowledges the support of its Secretariat under the leadership of Jeffrey O’Malley (Director, HIV/AIDS Practice, UNDP) and Mandeep Dhaliwal (Cluster Leader: Human Rights & Governance, HIV/AIDS Group, UNDP). Vivek Divan, Ian Mingall and Emilie Pradichit were the Secretariat’s unflagging core and the Commission is grateful for their hard work and dedication. The Commission also acknowledges the valuable contributions of the numerous staff, consultants, interns and volunteers who supported their work over the last eighteen months,a with particular appreciation for Judith Levine, the report’s lead author. The Commission also wishes to express its appreciation for the support of the Joint UN Programme on HIV/AIDS.

The Commission is grateful to Edwin Cameron, who was a Commissioner. In light of his obligations as a judge of the Constitutional Court of South Africa, he did not contribute to any of the substantive decisions of the Commission. Because of his judicial duties, he decided to officially step down as a Commissioner at the end of 2011.

Financial support for the Commission was generously provided by the American Jewish World Service (AJWS), Australian Agency for International Development (AusAID), Ford Foundation, Health Canada – International Affairs, Norwegian Agency for Development Cooperation (Norad), Office of the High Commissioner for Human Rights, Open Society Foundations, Swedish International Development Cooperation Agency (Sida), UNDP, UNFPA, UNICEF and the UNAIDS Secretariat.

</table>
In just three decades, over 30 million people have died of AIDS, and 34 million more have been infected with HIV. The HIV epidemic has become one of the greatest public health challenges of our time. It is also a crisis of law, human rights and social justice. The good news is that we now have all the evidence and tools we need to radically slow new HIV infections and stop HIV-related deaths. Paradoxically, this comes at a time when bad laws and other political obstacles are standing in the way of success.

34 million people are living with HIV, 7,400 are newly infected daily and 1.8 million died in 2010 alone. The legal environment—laws, enforcement and justice systems—has immense potential to better the lives of HIV-positive people and to help turn the crisis around. International law and treaties that protect equality of access to health care and prohibit discrimination—including that based on health or legal status—underpin the salutary power of national laws. But nations have squandered the potential of the legal system. Worse, punitive laws, discriminatory and brutal policing and denial of access to justice for people with and at risk of acquiring HIV are fueling the epidemic. These legal practices create and punish vulnerability. They promote risky behaviour, hinder people from accessing prevention tools and treatment, and exacerbate the stigma and social inequalities that make people more vulnerable to HIV infection and illness. HIV-positive people—be they parents or spouses, sex workers or health workers, lovers or assailants—interact intimately with others, who in turn interact with others in ever-larger circles, from the community to the globe. From public health to national wealth, social solidarity to equality and justice, HIV affects everyone. The prevention, treatment and care of HIV—and the protection and promotion of the human rights of those who live with it—are everyone’s responsibility.

The Global Commission on HIV and the Law undertook 18 months of extensive research, consultation, analysis and deliberation. Its sources included the testimony of more than 700 people most affected by HIV-related legal environments from 140 countries, in addition to expert submissions and the large body of scholarship on HIV, health and the law.

The Commission’s findings offer cause for both distress and hope for people living with or at risk for HIV. In June 2011, 192 countries committed to reviewing legislation and creating enabling legal and social environments that support effective and efficient HIV responses. The Commission’s recommendations offer guidance to governments and international bodies in shaping laws and legal practices that are science based, pragmatic, humane and just. The findings and recommendations also offer advocacy tools for people living with HIV, civil society, and communities affected by HIV. The recommendations take into account the fact that many laws exist for purposes beyond public health, such as the maintenance of order, public safety and the regulation of trade. But they place the highest priority on creating legal environments that defend and promote internationally recognised human rights and legal norms.

Among the Commission’s findings:

- 123 countries have legislation to outlaw discrimination based on HIV; 112 legally protect at least some populations based on their vulnerability to HIV. But these laws are often ignored, laxly enforced or aggressively flouted.
• In over 60 countries it is a crime to expose another person to HIV or to transmit it, especially through sex. At least 600 individuals living with HIV in 24 countries have been convicted under HIV-specific or general criminal laws (due to underreporting, these estimates are conservative). Such laws do not increase safer sex practices. Instead, they discourage people from getting tested or treated, in fear of being prosecuted for passing HIV to lovers or children.

• Women and girls make up half of the global population of people living with HIV. Laws and legally condoned customs—from genital mutilation to denial of property rights—produce profound gender inequality; domestic violence also robs women and girls of personal power. These factors undermine women’s and girls’ ability to protect themselves from HIV infection and cope with its consequences.

• Where sex education, harm reduction and comprehensive reproductive and HIV services are accessible to youth, young people’s rates of HIV and other sexually transmitted infections (STIs) drop. These interventions are rare, however, and in both developed and developing nations, the denial of the realities of young people’s lives is reflected in the high physical, emotional and social toll of HIV among the young.

• In many countries, the law (either on the books or on the streets) dehumanises many of those at highest risk for HIV: sex workers, transgender people, men who have sex with men (MSM), people who use drugs, prisoners and migrants. Rather than providing protection, the law renders these “key populations” all the more vulnerable to HIV. Contradictory to international human rights standards, 78 countries—particularly governments influenced by conservative interpretations of religion—make same-sex activity a criminal offence, with penalties ranging from whipping to execution. Similarly, laws prohibiting—or interpreted by police or courts as prohibiting—gender nonconformity, defined vaguely and broadly, are often cruelly enforced. The criminalisation of sex work, drug use and harm reduction measures create climates in which civilian and police violence is rife and legal redress for victims impossible. Fear of arrest drives key populations underground, away from HIV and harm reduction programmes. Incarceration and compulsory detention exposes detainees to sexual assault and unsafe injection practices, while condoms are contraband and harm reduction measures (including antiretroviral medicines) are denied.

• A growing body of international trade law and the over-reach of intellectual property (IP) protections are impeding the production and distribution of low-cost generic drugs. IP protection is supposed to provide an incentive for innovation but experience has shown that the current laws are failing to promote innovation that serves the medical needs of the poor. The fallout from these regulations—in particular the TRIPS framework—has exposed the central role of excessive IP protections in exacerbating the lack of access to HIV treatment and other essential medicines. The situation is most dire in low- and middle-income countries but reverberates through high-income countries as well. Provisions allowing some low- and middle-income countries exceptions to and relaxations of these rules could help alleviate the crisis, but pressure against their use is substantial. A small number of countries have been able to take advantage of the few international legal flexibilities that exist.
The Commission has found reason for hope. There are instances where legal and justice systems have played constructive roles in responding to HIV, by respecting, protecting and fulfilling human rights. To some such an approach may seem a paradox—the AIDS paradox. But compelling evidence shows that it is the way to reduce the toll of HIV.

• Where the police cooperate with community workers, condom use can increase and violence and HIV infection among sex workers can decrease. Where governments promulgate harm reduction, such as clean needle distribution programmes and safe injection sites, HIV infection rates among people who use drugs can drop significantly.

• Effective legal aid can make justice and equality a reality for people living with HIV, and this can contribute to better health outcomes. Advocates can creatively use traditional law in progressive ways to promote women's rights and health. Court actions and legislative initiatives, informed by fairness and pragmatism, can help nations shrug off the yoke of misconceived criminalisation, introduce gender-sensitive sexual assault law and recognise the sexual autonomy of young people.

• Despite international pressures to prioritise trade over public health, some governments and civil society groups are using the law to ensure access to affordable medicines, while exploring new incentives for medical research and development.

These successes can be—and need to be—expanded. It will take money and will. Donors, whose giving has flagged, must step up and reverse this trend, especially if the latest advances in science and in prevention programming are to benefit those in need. Countries must honour international human rights and national legal obligations. Where laws do not enhance human well-being and where laws do not respond to contemporary realities, they must be repealed and replaced by those that do. For justice and dignity, human rights and human life, the world can afford no less.

To ensure an effective, sustainable response to HIV that is consistent with human rights obligations, the Commission forcefully calls for governments, civil society and international bodies to:

• Outlaw all forms of discrimination and violence directed against those who are vulnerable to or living with HIV or are perceived to be HIV-positive. Ensure that existing human rights commitments and constitutional guarantees are enforced.

• Repeal punitive laws and enact laws that facilitate and enable effective responses to HIV prevention, care and treatment services for all who need them. Enact no laws that explicitly criminalise HIV transmission, exposure or non-disclosure of HIV status, which are counterproductive.

---

According to The Hon. Michael Kirby, the AIDS paradox can be described as follows: “It is a paradox, one of the most effective laws we can offer to combat the spread of HIV is the protection of persons living with HIV, and those about them, from discrimination. This is a paradox because the community expects laws to protect the uninfected from the infected. Yet, at least at this stage of this epidemic, we must protect the infected too. We must do so because of reasons of basic human rights. But if they do not convince, we must do so for the sake of the whole community which has a common cause in the containment of the spread of HIV.”
• Work with the guardians of customary and religious law to promote traditions and religious practice that promote rights and acceptance of diversity and that protect privacy.

• Decriminalise private and consensual adult sexual behaviours, including same-sex sexual acts and voluntary sex work.

• Prosecute the perpetrators of sexual violence, including marital rape and rape related to conflict, whether perpetrated against females, males, or transgender people.

• Abolish all mandatory HIV-related registration, testing, and forced treatment regimens. Facilitate access to sexual and reproductive health services and stop forced abortion and coerced sterilisation of HIV-positive women and girls.

• Reform approaches towards drug use. Rather than punishing people who use drugs but do no harm to others, governments must offer them access to effective HIV and health services, including harm reduction programmes and voluntary, evidence-based treatment for drug dependence.

• Enforce laws against all forms of child sexual abuse and sexual exploitation, clearly differentiating such crimes from consensual adult sex work.

• Ensure that the enforcement of laws against human trafficking is carefully targeted to punish those who use force, dishonesty or coercion to procure people into commercial sex, or who abuse migrant sex workers through debt bondage, violence or deprivation of liberty. Laws against human trafficking must be used to prohibit sexual exploitation, but they must not be used against adults involved in consensual sex work.

• In matters relating to HIV and the law, offer the same standard of protection to migrants, visitors and residents who are not citizens as is extended to citizens. Restrictions that prohibit people living with HIV from entering a country and/or regulations that mandate HIV tests for foreigners within a country should be repealed.

• Enforce a legal framework that ensures social protection for children living with and affected by HIV and AIDS. Laws must protect guardianship, property and inheritance rights, and access to age-appropriate, comprehensive sex education, health and reproductive services.

• Develop an effective IP regime for pharmaceutical products. Such a regime must be consistent with international human rights law and public health needs, while safeguarding the justifiable rights of inventors.

The Commission forcefully calls for a renewed and vigorous international collaboration in response to HIV. It calls on donors, civil society and the UN to hold governments accountable to their human rights commitments. It urges groups outside government to develop and implement humane, workable HIV-related policies and practices and to fund action on law reform, law enforcement and access to justice. Such efforts should include educating people about their rights and the law, preventing violence as well as challenging the stigma and discrimination within families, communities and workplaces that continue to feed a worldwide epidemic that should have ended long ago.
The law alone cannot stop AIDS. Nor can the law alone be blamed when HIV responses are inadequate. But the legal environment can play a powerful role in the well-being of people living with HIV and those vulnerable to HIV. Good laws, fully resourced and rigorously enforced, can widen access to prevention and health care services, improve the quality of treatment, enhance social support for people affected by the epidemic, protect human rights that are vital to survival and save the public money.

Every community in every country is home or host to people living with HIV. At the end of 2010, they numbered 34 million; alongside them are millions more at risk of infection.1 And although prevention and treatment have improved to a heartening degree over the past decade, almost 7,400 new people are infected each day. Only half of adults and a quarter of children eligible for life-saving anti-retroviral treatment under WHO guidelines received that care in 2010. That year, 1.8 million people died of AIDS-related causes.2 The law and its institutions can protect the dignity of all people living with HIV, and in so doing fortify those most vulnerable to HIV, so-called “key populations”; such as sex workers, MSM, transgender people, prisoners and migrants. The law can open the doors to justice when these people’s rights are trampled. By ensuring access to property and protection from all forms of violence, the law can improve women’s lives and give them the power and independence they need to preserve their health and that of their children.

According to the International HIV/AIDS Alliance, key populations are groups of people who are more likely to be exposed to HIV or to transmit it and whose engagement is critical to a successful HIV response. In all countries, key populations include people living with HIV. In most settings, men who have sex with men, transgender people, people who inject drugs and sex workers and their clients are at higher risk of exposure to HIV than other groups.
But the law can also do grave harm to the bodies and spirits of people living with HIV. It can perpetrate discrimination and isolate the people most vulnerable to HIV from the programmes that would help them to avoid or cope with the virus. By dividing people into criminals and victims or sinful and innocent, the legal environment can destroy the social, political, and economic solidarity that is necessary to overcome this global epidemic. Indeed, the world could have halted the HIV epidemic over a decade ago, sparing millions of lives and billions of dollars, but the political will and courage to do so was and is lacking.

What works? An effective HIV vaccine or cure would be a “game changer”, and scientists are working to find one. Meanwhile, as experience and evidence have taught us, much can be done even without a medical miracle. The combination of appropriate prevention and broadly available treatment can significantly rein in and even halt the spread of new infections. With therapy, most people with HIV can remain healthy and productive for decades. Each of these chips away at the number of deaths—mostly, at modest cost.³

But even as governments and international donors invest millions to combat HIV, around the globe many legal environments are hindering rather than helping HIV responses. Indeed, in many instances public health programmes to combat HIV are undermined by laws that criminalise the very practices the public health efforts promote and depend on—such as distributing clean needles and opioid substitution therapy to people who use drugs, providing condoms and harm reduction measures to prisoners, or supporting the free association of sex workers for the purposes of mutual support and education. If lawmakers do not amend these laws so that all resources are marshalled against the same enemy—HIV, not people living with HIV—the virus will be the victor and the world’s people, especially its most vulnerable, the vanquished.

It is in this context that the Programme Coordinating Board of the Joint UN Programme on HIV/AIDS called on UNDP to establish the Global Commission on HIV and the Law (the Commission).⁴ An independent body chaired by Fernando Henrique Cardoso, former president of Brazil,⁵ the Commission comprises 14 eminent individuals from across the world and is supported by a Technical Advisory Group of people living with HIV, members of affected communities and experts on law, public health, human rights and HIV.

Based on an analysis of where the law could transform the AIDS response and send HIV epidemics into decline, the Commission focused its inquiry on: (1) laws and practices that criminalise those living with and most vulnerable to HIV; (2) laws and practices that sustain or mitigate violence and discrimination against women; (3) laws and practices that facilitate or impede access to HIV-related treatment; and (4) issues of law pertaining to children and young people in the context of HIV.

The law often seems abstract and distant, and it can be hard to comprehend. But the plain truth about the law comes through in the words of the people who informed the Commission’s inquiry. For people living with HIV, for their families and communities, for key populations and those vulnerable to HIV, the law is neither abstract nor distant. It is police harassment or clean needles, prison cells or self-help groups—the law is the torturer’s fist or the healer’s hand.
HOW THE COMMISSION REACHED ITS CONCLUSIONS

The Global Commission on HIV and the Law undertook a broad and rigorous process of research, analysis and deliberation. The Commission used public health data, legal analysis, qualitative research, and community consultations to build an understanding of how legal environments influence HIV epidemics. Conscious that laws exist for important reasons that go beyond public health—the protection and promotion of human rights, maintaining public order and safety and the regulation of trade—the Commission also examined the degree to which HIV-related law, on the books and in practice, is consistent with human rights and other legal norms.

The Commission was supported by a Technical Advisory Group, which reviewed and analysed existing public health and legal evidence and also commissioned original analysis. This process was complemented by extensive consultation, resulting in the review of 680 written submissions from over 1,000 authors in 140 countries. Seven regional dialogues were convened (the largest of which was in Africa) to share and deliberate on evidence and experience. Through these dialogues, Commissioners heard the voices of over 700 people most affected by HIV-related law, including people living with HIV, people who had been prosecuted for HIV-related offences, prison directors, police officials, ministers of justice, health and home affairs, public health officials and religious leaders. Specialist submissions were sought from legal, human rights, and women’s organisations, pharmaceutical manufacturers and religious scholars. Finally, the Commissioners reflected on the considerable body of analysis and findings directly related to HIV and health in existing human rights scholarship, including the work of Special Rapporteurs on the “Right to Highest Attainable Standard of Health” and “Violence Against Women”. Except in the cases where confidentiality was requested, the written submissions and dialogue proceedings, discussion papers and sources are available on www.hivlawcommission.org.

Together, these sources provided compelling evidence of the critical relevance of law to HIV and the inextricable linkages between the respect for human dignity and effective, sustainable HIV responses. The Commission’s recommendations are therefore rooted in both solid public health evidence and human rights norms. Most recommendations are directed to “countries”, embracing not just Heads of State, Parliamentarians and other political actors, but also the judiciary, agents of law enforcement, municipal authorities, the private sector and civil society. States have a specific obligation to protect and promote human rights, but only a concerted effort from the whole of society will truly advance public health and social justice.
WRITTEN SUBMISSIONS RECEIVED BY THE COMMISSION

Note: Total Submissions: 680. 644 submissions were received for Regional Dialogues and 36 specialist submissions were received from experts and specialist organisations on HIV, health and the law.

Sources: Submissions received from November 2010 to October 2011. This includes all submissions for the Regional Dialogues and the Specialist Submissions. The world map has been inspired from AIDS-Free World.
In 2009 I met my status. I was invited to be on TV as I was a professional footballer. My girlfriend’s father saw this interview, the girl told me he didn’t know about HIV and told her he couldn’t accept the relationship. Her father (a police officer) came to arrest me at my house at 7am. I knew some of my rights so they just beat me up and put me in a cell in the police station. It was very bad. They just kept me in detention until an association of human rights marched to the police station and then I was freed. This story impressed my life. I could be bitter but I will fight to the end.

Noubissi Charles Domingo, RéCAP+, Cameroon, Africa Regional Dialogue, 3–4 August 2011

HUMAN RIGHTS: THE PillARS OF EQUIALITY
Equality and non-discrimination, inviolable in every key international human rights agreement, are the pillars on which all other human rights rest. So, although there is no binding international law expressly prohibiting discrimination on the basis of HIV status, those two principles guide and support the denunciation of discrimination related to HIV status and against the people it affects.

NATIONAL LEGISLATION AND COURT ACTIONS
Every country has some kind of legal framework to protect and promote human rights and challenge discriminatory practices. Many have ratified one or more of the nine core international human rights treaties or various regional human rights treaties. Many go further to outlaw HIV-related discrimination. The Member States of the UN General Assembly, in the 2011 Declaration of Commitment on HIV/AIDS and the 2006 and 2011 Political Declarations on HIV/AIDS, committed themselves to using the law to eliminate all forms of discrimination against people living with HIV. The Inter-American Commission on Human Rights and the Parliamentary Assembly of the Council of Europe have also advocated for the prohibition of such discrimination.

Some anti-discrimination laws find their underpinnings in national constitutions; others are built of case law or state-recognised religious law, such as the concept of privacy in Sharia. Of 168 countries reviewed by UNAIDS, 123 reported that they had passed legislation to outlaw discrimination based on HIV. 111 countries have specific non-discrimination laws or regulations that protect at least some specific populations based on their vulnerability to HIV.

More precisely, advocates and lawmakers have turned to the category of “other status” as the basis of protecting the rights of HIV-positive people, actual or presumed, their children...
LEGAL SHELTER

Laws to protect from HIV-related discrimination

THE LETTER OF THE LAW

The Philippines – AIDS Control and Prevention Act of 199817
“[D]iscrimination, in all its forms and subtleties, against individuals with HIV or persons perceived or suspected of having HIV shall be considered inimical to individual and national interest.” The Act also specifically prohibits discrimination in the workplace, schools, travel and habitation, public service, credit and insurance service, hospitals and health institutions and burial services.

The Bahamas – Employment Act of 200118
“No employer or person acting on behalf of an employer shall discriminate against an employee or applicant for employment on the basis of race, creed, sex, marital status, political opinion, age or HIV/AIDS.”

Australia – Anti-Discrimination Act of 199719
It is unlawful for a person “by a public act, to incite hatred towards, serious contempt for, or severe ridicule of” anyone actually or thought to be HIV-positive.
Chapter 1: Against Discrimination

or parents. The UN Commission on Human Rights has repeatedly confirmed that the term “other status”—a common category in human rights law comprising unnamed classes to be protected from discrimination—should be interpreted to cover health status, including HIV status. Protections against discrimination on the basis of disability may also be useful for people living with HIV, even though there is no universally accepted definition of the word. Most prominently, the Convention on the Rights of Persons with Disabilities contains a “social model” of disability that is broad enough to encompass HIV or AIDS.

In some countries, High Courts have ruled that laws prohibiting discrimination based on disability protect people living with HIV based on their sero-status, and that this includes both actual and perceived disability. For instance, the Supreme Court of the United States ruled that people living with HIV are protected under the Americans with Disabilities Act.

Even when there are no laws against HIV-based discrimination, national courts have often looked to constitutional guarantees of dignity and equality to prohibit discriminatory practices. When HIV-positive people have been kept out of public swimming pools, restaurants, day-care or health services—such bans usually justified by the notion that they protect others’ health—some courts have stepped in to overrule these policies. Some courts have also invoked the rights to livelihood and equality in hiring, as well as the internationally recognised right to “the highest attainable standard of health”.

NEGLECTED ENFORCEMENT, FLOUTED LAWS

Often, legislation commits a nation to guaranteeing internationally affirmed human rights of equality, liberty and health. But for many reasons (such as lack of resources, political chaos or interpretations of religion), governments frequently fail to uphold these obligations. National legislation may prohibit discrimination, but the law is often ignored, laxly enforced or aggressively flouted. In public institutions and in their homes, people living with HIV feel the blows of stigma, discrimination, marginalisation and verbal and physical abuse. These experiences are often compounded by bigotry (based on sex, gender, sexual orientation, social origin, occupation, race or status as a person who uses drugs or engages in sex work) that spills over into...
onto their families. The children of sex workers and people who use drugs may be tormented by other children; if a parent is HIV-positive, his or her child may be barred from school.28 Many people living with HIV find there is no recourse, nowhere to register a complaint and no authority to redress the problem.

To make law real on the ground, the state must educate health care workers, legal professionals, employers and trade unionists, and school faculties about their legal responsibilities to guarantee inclusion and equality. People living with or affected by HIV must be informed of their rights. The legal ideal of non-discrimination must be defended by enforcement: prompt and affordable access to redress in cases of violations, including affordable, accessible legal services and confidentiality of proceedings.

ADVOCACY FOR EQUALITY

Where there is discrimination, increasingly, people are fighting back. Advocates are pushing to strengthen legal recognition of the rights of HIV-positive people and providing legal help to those whose rights are violated. In Algeria, for instance, the Association de Protection Contre le Sida (APCS) and Le Fond pour les Droits Humains Mondiaux (FDHM), with the support of volunteer lawyers, are bringing claims of discrimination to the courts for MSM, vulnerable women affected by HIV and migrants living in Algeria—people who would not otherwise have a voice.29 At the end of 2011, the report of the Commonwealth Eminent Persons recommended that governments in the Commonwealth of Nations take steps to repeal discriminatory laws that impede effective HIV responses.30

Pressure on governments has often impelled their ministries to require employers and businesses dealing with the public to treat people with HIV fairly. In early 2010, French Finance Minister Christine Lagarde directed insurance and loan companies to review and amend their pensions, health insurance, death benefits and loan disbursement policies with an eye toward reinforcing the social welfare of people living with HIV.31 As a result, on 1st February 2011 Christine Lagarde, Minister of Labour, Xavier Bertrand, and Minister of Social Affairs, Roselyn Bachelot, co-signed the 2011 AERAS Convention enabling access to loans, pensions, health insurances and other benefits for people living with aggravated health risks, including people living with HIV. The Convention entered into force on 1 March 2011.32 In Burkina Faso, the Ministry of Labour and Social Security and the International Labour Organization, along with employers’ and workers’ organisations, are creating a legal and policy framework conducive to HIV prevention and protective of workers’ rights in connection with HIV and AIDS. Their efforts go beyond the formal public and private sectors to the informal economy as well.33
RECOMMENDATIONS

To ensure an effective, sustainable response to HIV that is consistent with human rights obligations:

1.1. Countries must ensure that their national HIV policies, strategies, plans and programmes include effective, targeted action to support enabling legal environments, with attention to formal law, law enforcement and access to justice. Every country must repeal punitive laws and enact protective laws to protect and promote human rights, improve delivery of and access to HIV prevention and treatment, and increase the cost-effectiveness of these efforts.

1.2. Where they have not already done so, countries must explicitly prohibit discrimination on the basis of actual or perceived HIV status and ensure that existing human rights commitments and constitutional guarantees are enforced. Countries must also ensure that laws and regulations prohibiting discrimination and ensuring participation and the provision of information and health services protect people living with HIV, other key populations and people at risk of HIV.

1.3. Donors, civil society and private sector actors, and the UN should hold governments accountable to their human rights commitments. Groups outside government should develop and implement rights-based HIV-related policies and practices and fund action on HIV-related law reform, law enforcement and access to justice. Such efforts should include educating people about their rights and the law, as well as challenging stigma and discrimination within families, communities and workplaces.
Despite the description . . . by legislators and prosecutors, in fact, it is not intentional transmission but intentional sex while HIV-positive that is the focus of these state laws….The facts of many of these cases read like what should be relics from a less-informed past. Instead, they describe increasingly frequent current events.

Catherine Hanssens, Centre for HIV Law & Policy, U.S., High Income Countries Dialogue, 16–17 September 2011

In much of the world it is a crime to expose another person to HIV or to transmit it, especially through sex. Fundamentally unjust, morally harmful, and virtually impossible to enforce with any semblance of fairness, such laws impose regimes of surveillance and punishment on sexually active people living with HIV, not only in their intimate relations and reproductive and maternal lives, but also in their attempts to earn a living.

Proponents of criminalisation often claim that they are promoting public health or morality. Some may even harbour good-hearted, if wrongheaded, intentions, of safeguarding the rights and health of women. But criminalisation guarantees no one’s well-being. There is no evidence that laws regulating the sexual conduct of people living with HIV change behaviour in a positive way. Nor do such laws take into account the success of antiretroviral treatment (ART) in significantly reducing transmission risk and improving the quality of life and longevity for people with HIV. AIDS service organisations report that the threat of prosecution neither empowers people living with HIV to avoid transmission nor motivates them to protect themselves. Indeed, the fear of prosecution isolates them and discourages them from getting tested, participating in prevention or treatment programmes or disclosing their status to partners. The criminal justice system fights the health care system—one repelling, the other reaching out to people vulnerable to or affected by HIV. By dividing populations into the sick and the healthy or the guilty and the innocent, criminalisation denies the complex social nature of sexual communities and fractures the shared sense of moral responsibility that is crucial to fighting the epidemic.

Some jurisdictions apply existing general offences to criminalise HIV exposure or transmission—from “administration of a noxious substance” (France) to attempted homicide (United States). Others have chosen to target HIV-specific laws were passed in the United States in 1987, with many other nations quickly following
Criminalising HIV transmission and exposure:
HIV-specific laws and HIV-specific provisions in laws in select regions

- **Red**: laws criminalising HIV transmission and exposure
- **Blue**: no such laws

Source: Global Criminalisation Scan, GNP+ Global Network for People Living with HIV, 2012.
The past decade has seen a new wave of HIV-specific statutes, notably in sub-Saharan Africa and parts of Asia and Latin America. The past decade has seen a new wave of HIV-specific statutes, notably in sub-Saharan Africa and parts of Asia and Latin America.

Today, countries and jurisdictions in every region of the world have promulgated HIV-specific criminal statutes. They’re on the books in 34 states and 2 territories in the United States; in Africa, 27 countries have them; in Asia and the Pacific, 13; Latin America, 11; and Europe, 9. According to a 2010 report by the Global Network of People Living with HIV (GNP+), at least 600 people living with HIV in 24 countries have been convicted under HIV-specific or general criminal laws, with the greatest numbers reported in North America.

**RIGHTS AND RESPONSIBILITIES**

In Africa alone over the last seven years, numerous countries have adopted HIV-specific criminal legislation. In every case, the irony is glaring: these laws, which purport to be based on human rights principles, in fact trample human rights. This continent-wide contradiction derives largely from the Model Law on STI/HIV/AIDS for West and Central Africa, developed at a workshop held in N’Djamena, Chad, in 2004. This template, conceived as human rights legislation to combat discrimination and address HIV testing, takes a “rights and responsibilities” approach. For instance, it includes guarantees of pre- and post-testing counseling and anti-discrimination protections in employment and insurance for HIV-positive people. At the same time, it holds HIV-positive people legally responsible for disclosing their HIV status to anyone they have sex with and taking active measures to prevent transmission. Failure to do so brings criminal sanctions.

Some jurisdictions punish exposure even if there is no transmission of HIV, and some punish transmission even if the person wears a condom; prosecutions proceed in spite of the medical near-impossibility of determining who infected whom. And, because ART significantly reduces the likelihood of transmission, it is access to treatment, not criminalisation, that is effective in reducing infection.

**WHAT GETS PROSECUTED . . .**

The main “criminal activity” for people who are HIV-positive is sex, and the laws can be overly broad and the penalties draconian. For instance, Bermuda makes it a crime for people living with HIV to have any kind of sexual contact in which body fluids might pass to another person. As a consequence, two people have received ten-year sentences, though HIV was not transmitted in either case. In Singapore, those who merely have reason to believe that they may be HIV-positive or might have been exposed to significant risk of contracting the virus face ten years’ imprisonment if convicted of having sex without informing their partner of the possible risk or taking reasonable precautions against transmission.

But sex is not the only “crime” for which HIV-positive people may be punished. Spitting and biting have been prosecuted. Advocates worry that simply being pregnant or breastfeeding with HIV could land a woman in prison. In many penal codes these laws are extraordinary for the personal surveillance they represent and the wildly disproportionate sentences they carry.

**. . . AND WHO**

In 2008 in Texas, United States, an African-American mentally ill homeless man living with HIV spat at a police officer during an arrest for drunk and disorderly conduct. The jury was persuaded that his saliva was a deadly weapon, and he got a thirty-five-
The impact of HIV criminalisation on people living with HIV is ultimately destructive and divisive, creating a sense that there are ‘good’ HIV-positive people versus ‘bad’ HIV-positive people. The people who complain to the police, supported by the criminal justice system, believe that they should be warned when their sexual partner is HIV-positive. Never mind the incredible difficulties we might have disclosing this very sensitive information to people who we don’t trust; the deep denial we often face earlier on in our diagnosis; the difficulties we have negotiating or using condoms; or the fact that those of us on effective treatment are going to be far less infectious than people who are undiagnosed and who couldn’t possibly warn their partner.

Edwin J. Bernard, Germany, High Income Countries Dialogue, 16–17 September 2011

year sentence—despite the fact that HIV cannot be transmitted by spitting. In 1988 an HIV-positive Minnesota prisoner was convicted of biting two prison guards: His mouth and teeth were found to be a “deadly and dangerous weapon”.

In Denmark, Estonia, Finland, Sweden and the United Kingdom, migrants and asylum seekers have been disproportionately represented among those prosecuted for HIV transmission and exposure. In some jurisdictions, HIV-positive people convicted of a crime, such as rape, can face an exacerbated sentence—positive serostatus is viewed as an aggravating factor, akin to using a weapon in the crime’s commission.

As these last examples suggest, anti-transmission and exposure laws are often arbitrarily and disproportionately applied to those who are already considered inherently criminal—both reflecting and perpetuating existing social inequalities.

Sensational media coverage of HIV-transmission prosecutions exaggerates the alleged evil and dangerousness of HIV ‘perpetrators’. Sarah Jane Porter, a forty-three-year-old British single mother and hair salon receptionist, was convicted in 2006 and sentenced to thirty months for grievous bodily harm in transmitting HIV to her former boyfriend. The press portrayed her as a wildly promiscuous “AIDS avenger” on a rampage against black men like her son’s father, from whom she had contracted HIV. The police, claiming she had dozens of potential victims, put out a nationwide call for accusers and three of the four they contacted tested negative for HIV. While describing Porter as “callous” and “manipulative”, the prosecution praised her accusers as “very articulate professional decent men who were trying to do their best in life”. Porter’s friends and neighbours, meanwhile, described a quiet, overworked mother whose boyfriend had asked for unprotected sex and whose only “crime” was her denial of her own HIV status—the reason she did not disclose it to others.

Although proponents often argue that criminalisation is needed to protect women, especially monogamous wives, from the risk of HIV infection by male sexual partners, in reality such laws make criminals of the same women they’re intended to protect. HIV-positive mothers are criminals under all of the HIV laws of West and Central Africa, which explicitly or implicitly forbid them from being pregnant or breastfeeding, lest they transmit the virus to foetus or child. The law does not acknowledge that women are frequently unable to disclose their HIV status or demand the use of a condom because they fear violence, abuse or abandonment by their husbands or partners and/or are worried that information might be used as a tool for revenge or coercion. As for alleging the intentional transmission of HIV from a mother to a child, the concept is so unlikely as to approach absurdity.
IS CRIMINALISATION EVER JUSTIFIED?

Criminalisation is justified under one condition only: where individuals maliciously and intentionally transmit or expose others with the express purpose of causing harm. But existing laws—against assault, homicide and causing bodily harm, or allowing intervention where a person is spreading communicable diseases—suffice to prosecute people in those exceptional cases. Defining specific HIV offences is not warranted and, in fact, violates international human rights standards. For instance, in the International Guidelines on HIV and Human Rights, Guideline 4 directs States to ensure that their criminal laws “are not misused in the context of HIV/AIDS or targeted against vulnerable groups.”

That said, such laws are virtually impossible to prosecute. Intentional transmission is difficult to prove in the context of consensual sex. Alleging “recklessness” or “negligent” transmission is equally problematic. It requires proving the defendant’s state of mind—getting testimony from health care professionals, diaries or emails offering insight into a defendant’s thoughts. UNAIDS and UNDP have called on governments to limit criminalisation to cases where a person knows his or her HIV-positive status, acts with intent to transmit HIV and actually transmits it. However, most Western legal systems allow the defence of consent, thus preventing the punishment of, for example, Roman Catholic husbands with HIV whose wives have consented to the risk of transmission rather than offend against religious proscriptions concerning non-procreative sex.

Myriad other considerations arise. Did the defendant know her HIV status? Did she know how HIV is transmitted? Did she think her partner already was aware of her status or consented to unsafe sex? Was the defendant under threat of violence from the complainant and thus unable to disclose her status or practice safer sex? Was it actually the defendant who transmitted HIV to the complainant? Phylogenetic analysis, which can establish whether the sub-type of HIV in the defendant’s body is the same as in the complainant’s, is far too costly for many low-resource countries. Additionally, it doesn’t offer incontrovertible proof of who infected whom.

DIFFERENT QUESTIONS, DIFFERENT LAWS

International bodies and national governments are starting to recognise the injustice of sprawling HIV criminalisation laws and amend them so as to zero in on intentional, malicious acts.

---

“Phylogenetic analysis examines small genetic differences in HIV. Unlike human DNA, which remains stable for a lifetime, HIV’s RNA changes very rapidly, leading to a huge amount of genetic diversity. Phylogenetic analysis can only determine the degree of relatedness of two samples of HIV. It cannot create a definitive match.”
To ensure an effective, sustainable response to HIV that is consistent with human rights obligations:

2.1. Countries must not enact laws that explicitly criminalise HIV transmission, HIV exposure or failure to disclose HIV status. Where such laws exist, they are counterproductive and must be repealed. The provisions of model codes that have been advanced to support the enactment of such laws should be withdrawn and amended to conform to these recommendations.

2.2. Law enforcement authorities must not prosecute people in cases of HIV non-disclosure or exposure where no intentional or malicious HIV transmission has been proven to take place. Invoking criminal laws in cases of adult private consensual sexual activity is disproportionate and counterproductive to enhancing public health.

2.3. Countries must amend or repeal any law that explicitly or effectively criminalises vertical transmission of HIV. While the process of review and repeal is under way, governments must place moratoria on enforcement of any such laws.

2.4. Countries may legitimately prosecute HIV transmission that was both actual and intentional, using general criminal law, but such prosecutions should be pursued with care and require a high standard of evidence and proof.

2.5. The convictions of those who have been successfully prosecuted for HIV exposure, non-disclosure and transmission must be reviewed. Such convictions must be set aside or the accused immediately released from prison with pardons or similar actions to ensure that these charges do not remain on criminal or sex offender records.
The lived experiences of sex workers, people who use drugs and LGBT (lesbian, gay, bisexual and transgender) people show the impossibility of governments stigmatising people on one hand while simultaneously actually helping to reduce their risk of HIV transmission or exposure on the other.

Anna Forbes, Sex Workers Coalition, U.S., High Income Countries Dialogue, 16–17 September 2011

To safeguard their health and that of others, key populations—the people at greatest risk of HIV infection (including MSM, transgender people, sex workers, people who use drugs, prisoners and at-risk migrants)—must have access to effective HIV prevention and treatment and commodities such as clean needles and syringes, condoms and lubricant. Numerous international bodies call the provision of these things a human rights obligation. But a needle or a condom is only the concrete representation of what key populations (like everyone) are entitled to: the fundamental human rights of dignity, autonomy and freedom from ill treatment, as well as the right to the highest attainable standard of physical and mental health, regardless of sexuality or legal status.79

Countries and donors fail to invest sufficiently in the inexpensive commodities that can stop infection or the programmes to promote and distribute them, and some governments criminalise their possession. Not only do states fail to protect HIV-vulnerable people from violence or ensure their access to justice, governments stand by as their agents administer society’s messages of disgust and contempt—beatings, extortion, torture, selective or arbitrary

---

79 According to the International HIV/AIDS Alliance, key populations are groups of people who are more likely to be exposed to HIV or to transmit it and whose engagement is critical to a successful HIV response. In all countries, key populations include people living with HIV. In most settings, men who have sex with men, transgender people, people who inject drugs and sex workers and their clients are at higher risk of exposure to HIV than other groups. See, UN Political Declaration to Shape HIV Response, International HIV/AIDS Alliance, June 17, 2011, available at: http://www.aidsalliance.org/newsdetails.aspx?id=290951%20.
arrest, punishment vastly disproportionate to the alleged infraction, unsafe prison conditions, and mistreatment rather than protection in cases of violence.

Such abusive practices are usually illegal, yet they persist. They are not simply the aberrant acts of a small number of poorly trained officers. In many cases, the police commit violent and discriminatory acts because the law and social attitudes at least tacitly authorise them to do so, in the name of public safety, order, or morality. When the law punishes drug use, sex work, and certain sexual behaviours and identities, key populations can neither count on the police for protection from violence nor seek legal redress when they are its victims, especially when the perpetrators are police officers. After all, under the law, the transgender person or sex worker is the “criminal”. That lack of justice reinforces the climate of police impunity. Together, punitive laws, discriminatory enforcement and systematic bars to justice violate the basic human rights of key populations; in fact, they practically guarantee such violation.

But even where it is currently impossible to rebuild the edifice of the law, social—even legal—changes can be made. No government explicitly allows police brutality: such acts can be investigated and punished. Stigma and discrimination, similarly, can be challenged—if not by the government, then by community organisations and non-governmental organisations (NGOs). And just as the cycle of discrimination, violence and government neglect of key populations erect barriers to HIV prevention, treatment and care, these incremental changes can help to dismantle those barriers.

When I can work in safe and fair conditions. When I am free of discrimination. When I am free of labels like “immoral” or “victim”. When I am free from unethical researchers. When I am free to do my job without harassment, violence or breaking the law. When sex work is recognised as work. When we have safety, unity, respect and our rights. When I am free to choose my own way. THEN I am free to protect myself and others from HIV.

Empower Foundation, Thailand, Asia-Pacific Regional Dialogue, 16–17 February 2011
Religion and religious communities can offer emotional succor and social support to people living with or vulnerable to HIV. Religious institutions have often been at the forefront of caring for people living with HIV, and some play important roles in prevention. But narrow and punitive interpretations of religion—especially in concert with law—can also make those most at risk more vulnerable by condemning and criminalising their identities and behaviours. Some countries cite religion to exempt themselves from international human rights guarantees of equality and prohibitions of inhumane punishment. For instance, Egypt has used its right of reservation under a number of international agreements, including CEDAW—the Convention on the Elimination of Discrimination Against Women—where it believes certain articles conflict with Sharia.°

Recently, Ugandan Pentecostal Christian evangelicals, with help from their United States counterparts, have pushed forward a draconian Anti-Homosexuality Bill, which originally called for the death penalty in some circumstances. Similar efforts are under way in Malawi, Republic of Congo, Zambia, Zimbabwe and Moldova. In Latin America, some African countries, the Philippines and elsewhere, the Roman Catholic Church has blocked sex education and condom distribution and intervened to curtail the rights of HIV-positive people.°° And in its closing remarks at the 2011 High Level Meeting on HIV, the Holy See camouflaged blame of the HIV-positive in the language of concern for them, claiming that “the causes of [HIV/AIDS] clearly reflect a serious crisis of values.”°°° Subtly expressing the Church’s rejection of harm reduction and other proven pragmatic prevention strategies—and even the principle that all people are born with dignity—its spokesperson said: “Prevention first and foremost must be directed toward formation and education in responsible human behavior or, in other words, acquired human dignity.”°°° At the same time, many religious institutions have been crucial players in the HIV response. In Malaysia, where injection drug use is the main driver of HIV transmission, the Malaysian AIDS Council has partnered with the government’s Department of Islamic Development to promote evidence-based public health responses to HIV and replace ideological conservatism with pragmatism.°°°° Mauritania has pledged to uphold human rights in working to reconcile the flawed but partially valuable N’Djamena model with Islam. And the Laotian Buddhist Metta Dhamma Project works with communities in HIV prevention and care and offers spiritual support to people living with HIV throughout Southeast Asia.°°°

It is clear that all major religious traditions, as well as other customary legal systems, have doctrine or theology that can be used to fight discrimination and exclusion; to protect privacy and health; and to support public health measures that reduce harm to key populations, people with HIV and those around them. Unfortunately, many religious traditions also have other elements of doctrine that are cited to justify extremely harsh penalisation of prostitution, drug use and homosexual behaviour—sometimes to the point of the death penalty. Sharia may be interpreted in a way that gives men power over women. All this increases HIV vulnerability.

To alleviate suffering, religious and secular actors must work together to harmonise the practices of faith with the ideals of human rights. Such progress is possible. The notion of fundamental human rights grew out of natural law concepts, often founded on human dignity ascribed to divine characteristics of humanity.

RECOMMENDATIONS

3. To ensure an effective, sustainable response to HIV that is consistent with human rights obligations, countries must prohibit police violence against key populations. Countries must also support programmes that reduce stigma and discrimination against key populations and protect their rights.
Among the greatest risks of drug use is heightened exposure to HIV infection. HIV risk is particularly elevated for the approximately 16 million people worldwide who inject drugs. About 3 million are reported to already be infected with HIV, and about one in ten new HIV infections is related to injection drug use. Sharing infected needles and syringes is the most widespread route of HIV transmission amongst drug users, other drug-taking practices can also put people at risk. Sharing of some other drug paraphernalia may also share HIV, and many different kinds of drugs can lead to higher rates of sexual risk-taking.

HIV is not the only harm to befall people who use drugs; excessive use or addiction can inflict many other injuries to health and life. But it is not just the drugs that may endanger users, nor is it just the drugs plus the scant access users have to services for HIV and health care. Punitive laws enforced against people who use drugs but do no harm to others fuel the spread of HIV and keep users from accessing services for HIV and health care.

HIV can be transmitted between people who use drugs through unsafe injection practices, such as sharing needles in which HIV-infected blood lingers. If HIV-positive people who use drugs have sex without a condom, the virus can be transmitted to their sexual partners. Harm reduction can make the difference between health and HIV infection—between life and death—not just for people who inject drugs but also for their sex partners and their communities. Multiple systematic reviews of evidence have shown that countries or jurisdictions that have legalised comprehensive harm reduction services have significantly reduced HIV infections among people who use drugs, compared with persistent or growing rates in countries or jurisdictions where such services are restricted or blocked by law.

The differences can be striking, as is the case with two cities in Scotland. Edinburgh effectively prohibited the purchase and possession of syringes without a prescription in 1981 and had HIV prevalence amongst drug injectors of over 50% by
In Glasgow, however, syringe purchase and possession was allowed, and HIV prevalence amongst drug users remained very low, between 1% and 2%.95

INTERNATIONAL & NATIONAL DRUG LAWS

Three UN conventions govern the contemporary international drug control system. The Single Convention on Narcotic Drugs (1961) mandates that narcotic drugs (such as opium, coca, marijuana and their derivatives) be produced, distributed, possessed and used for medical and scientific purposes only.96 The 1971 Convention on Psychotropic Substances puts similar restrictions on primarily synthetic psychotropic substances, such as amphetamines, barbiturates, benzodiazepines and psychedelics.97 The 1988 Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances promotes co-operation among states to address the international dimension of trafficking.98

Because drug trafficking harms society, these conventions aim to reduce the supply of drugs, largely through criminal sanctions.99 However, while the conventions do allow for treatment, rehabilitation and social reintegration—as opposed to punishment—the approach to people who use drugs has been predominantly repressive.100 Almost everywhere, drug policy falls under the aegis of law enforcement and not of health, and outlaw individual drug possession and use. Some laws also mandate compulsory treatment for drug dependence, testing for suspected drug use and registration of drug users.101

Several decades of experience show that repressive drug control laws and policies fail to achieve their purported goals, whether fighting crime or reducing drug use or drug-related harm. They worsen health and contribute to increasing human rights violations against people who use drugs.102 And they decidedly do not stem HIV infection.103

DRUG WARS AND CASUALTIES

Intentionally or not, “wars on drugs” are wars on people who use drugs, and these people face police harassment, violence and incarceration; discrimination in health care, housing,
employment and schooling; and political disenfranchisement. Police officers pressed to meet arrest quotas seek out easy targets. Because they are socially, economically and legally marginalised, sometimes living on the streets or in highly policed neighborhoods, people who use drugs are easy targets. In Georgia, drug crackdowns in 2007 resulted in 4% of Georgia’s male population being tested for drugs, many under forced conditions; 35% of these men went to prison on a drug-related charge.

In many Eastern European and Central Asian countries, people who use drugs are named on drug registers. These registers brand people who use drugs as sick and dangerous, sometimes for life (in some places, a person who quits using drugs is not removed from the register). They also may result in denial of employment, travel and immigration; loss of child custody; and police harassment. “Rehabilitation” in countries can often be thinly veiled punishment. In Cambodia, Malaysia, China and Vietnam, many people who use drugs endure involuntary treatment in prisons or in drug detention centres. In these places, under the guise of treatment, people who use drugs undergo humiliation, beatings and forced labour—all abuses of their basic human rights. Confinement further increases the risk of HIV transmission: inmates, who have little or no access to condoms, sterile needles and syringes or opioid substitution therapy, engage in unprotected sex and risky injecting behaviour. Recently, Malaysia and Indonesia have rejected the “drug detention centre” approach in favour of voluntary, community-based treatment.

Criminalisation of drug use undermines human rights–based HIV education, prevention and treatment, including harm reduction programmes. A 2010 report reviewing harm reduction programmes in Asia found that at least one of the core services of harm reduction is prohibited under law in Cambodia, China, Lao PDR, Myanmar, Malaysia, Philippines, Afghanistan, Bangladesh, India, Maldives, Nepal and Pakistan. In fact, many countries criminalise proven interventions such as syringe access and medication-assisted treatment for opioid dependence. In Russia and Thailand, people who enrol in public drug treatment programmes are added to registries—which, needless to say, discourages them from seeking treatment.

“I also propose that you work to close ‘compulsory drug detention centers’ where many drug users are held, yet where the oversight of the courts and justice system do not extend, and where as a result violations of basic human rights are the norm. Failing to successfully ‘treat’ drug users, and resembling military boot camps where they are often housed, these Thai drug ‘rehabilitation centers’ are just an extra-judicial measure to detain people who use drugs, yet detainees enjoy fewer rights than even people in prison.”

Kamon Uppakaew, Thai AIDS Treatment Action Group, Thailand, Asia-Pacific Regional Dialogue, 16–17 February 2011
Fear of police action makes people who use drugs wary and furtive. They may avoid carrying sterile injection equipment, which is either explicitly criminalised in some countries and/or used by police as evidence of drug use. They may inject quickly to avoid detection, dispose of syringes improperly or resort to reusing needles. In Russia, which records 150 new cases of HIV infection daily—7 in 10 of whom are injecting drug users—drug treatment programmes provide no services or care related to HIV transmission through unsafe injection practices, and the State Anti-Drug Policy Strategy restricts harm reduction programmes and promotion of harm reduction within the territory of the Russian Federation, including banning opioid substitution therapy until 2020. The Network for Harm Reduction in Russia is working to delete this, and numerous other counterproductive clauses, from the plan.

CALLING OFF THE POLICE

With an understanding that humane policies are more effective in combating drug-related harm and that punitive ones have adverse effects on individuals and communities, some governments are supplanting policing with public health promotion. More than half of the 158 countries and territories where injecting drug use is reported to occur have adopted such policies and programmes.

In 2010:

- 93 supported harm reduction in policy or practice
- 79 referred explicitly and positively to harm reduction in national policy documents
- 82 had needle and syringe exchange
- 10 had needle and syringe exchange in prisons
- 74 had opioid substitution therapy
- 39 had opioid substitution therapy in prisons
- 8 had drug consumption rooms

New Zealand’s Misuse of Drugs Amendment Act 1987 removed criminal sanctions for the sale of needles and syringes to people who inject drugs. That opened the way for those people to make use of evidence-based HIV services for people who use drugs—without any evidence of an increase in drug use and
The regulation of illicit drugs may have a positive impact on reducing HIV.\textsuperscript{29} That is why some experts have argued for decriminalisation without full-out legalisation of drugs used for non-medical purposes. Under a decriminalisation framework, drug use or possession of small amounts remains prohibited by the state, but infractions fall under the aegis of civil or administrative law, and penalties are minor. Accordingly, some countries have recognised that users sometimes sell small amounts of drugs for personal support or survival; understanding that this is a far cry from a major trafficking offence, lawmakers have amended statutes to reflect the difference.\textsuperscript{30} Brazil decriminalised the possession and consumption
LESS PUNISHMENT, LESS DRUG USE

Portugal’s success

On July 1, 2001, a Portuguese law came into effect that decriminalised the possession and use of illicit drugs in small enough amounts to suggest personal use. Drug trafficking continues to be a criminal offence, and drug possession and use are still illegal, but these latter infractions incur only administrative penalties, just as a parking ticket would. Rather than prison or other criminal penalties, as earlier laws mandated, people found to be in possession of or using drugs go before a panel consisting of a psychologist, a social worker and a legal adviser. The panel may impose any of a range of sanctions, including fines, community service and suspension of professional licences. For those who are dependent on drugs, the panel may forego a sanction and instead order the person to attend an educational programme or receive treatment. The number of people on methadone and buprenorphine for drug dependency rose to 14,877 from 6,040 after decriminalisation—treatment funded with the money Portugal saves on police and prisons.131

Portugal now reports one of the lowest rates of lifetime marijuana use (that is, at least one use in a lifetime) in the EU: 8.2%, compared with 25% in the EU generally. Data also shows a drop in drug use by teens; lifetime heroin use in 16- to 18-year-olds dropped from 2.5% to 1.8%.132

New HIV infections among people who use drugs fell by 17% from 1999 to 2003, while fewer people died from causes related to drug use.133

of drugs for personal use in 2004, and in March 2008 its Appeals Court ruled criminal prosecution for drug possession unconstitutional.134 And, notwithstanding its deadly war on drugs, Mexico in 2009 adopted legislation decriminalising possession of small amounts of drugs—including cocaine, marijuana, heroin, methamphetamine and LSD—for “personal and immediate use”.135 These legal changes remove the fear of arrest and stigma and encourage people who use drugs to get tested for HIV or access treatment. Drug use has not grown in any of these countries in the wake of these legal reforms.136

Where drug possession is still illegal, some governments have trained police to be sensitive to drug users and discouraged prosecutors from seeking criminal, especially custodial, penalties. In 2002, at least 27 cities in Switzerland, Germany, Australia and elsewhere set up supervised sites where users can inject in a safe, hygienic environment without risk of arrest.137 In its September 2011 decision to keep open a Vancouver injection site called Insite, the Supreme Court of Canada referred to the Canadian Charter of Rights and Freedoms, which commits the state to upholding the human rights of all people—including people who use drugs, the Court said. Noting that “successful [HIV] treatment requires acknowledgment of the difficulties of reaching a marginalised population with complex mental, physical and emotional health issues”, the Court also declared that people who use drugs should not be forced to choose between abstinence and forgoing health services.138
RECOMMENDATIONS

To ensure an effective, sustainable response to HIV that is consistent with human rights obligations:

3.1 Countries must reform their approach towards drug use. Rather than punishing people who use drugs who do no harm to others, they must offer them access to effective HIV and health services, including harm reduction and voluntary, evidence-based treatment for drug dependence. Countries must:

3.1.1 Shut down all compulsory drug detention centres for people who use drugs and replace them with evidence-based, voluntary services for treating drug dependence.

3.1.2 Abolish national registries of drug users, mandatory and compulsory HIV testing and forced treatment for people who use drugs.

3.1.3 Repeal punitive conditions such as the United States government’s federal ban on funding of needle and syringe exchange programmes that inhibit access to HIV services for people who use drugs.

3.1.4 Decriminalise the possession of drugs for personal use, in recognition that the net impact of such sanctions is often harmful to society.

3.1.5 Take decisive action, in partnership with the UN, to review and reform relevant international laws and bodies in line with the principles outlined above, including the UN international drug control conventions: the Single Convention on Narcotic Drugs (1961); Convention on Psychotropic Substances (1971); the Convention against the Illicit Traffic in Narcotic Drugs and Psychotropic Substances (1988) and the International Narcotics Control Board.
Many more than 100 countries explicitly criminalise some aspect of sex work. Some countries, such as most of the United States, Cuba, People’s Republic of China, Iran, Vietnam and South Africa, outlaw it entirely. Some in Western Europe, Latin America and Canada prosecute only related activities such as brothel-keeping or transporting sex workers, communicating for the purposes of prostitution, street soliciting and living off its profits. Norway and Sweden arrest the clients of sex workers but not the workers themselves. This so-called “Swedish approach” is seen as more just to sex workers, who are perceived as victims by its proponents. This approach has been applied in other countries and has actually resulted in grave consequences for the workers.

Some governments deploy anti-human-trafficking laws so broadly that they conflate voluntary and consensual exchanges of sex for money with the exploitative, coerced, often violent trafficking of people (primarily women and girls) for the purposes of sex. Municipalities may interdict commercial sex under the authority of vaguely worded statutes relating to “public decency”; “morality” and even rape; “nuisance” laws prohibiting loitering and vagrancy; or zoning or health regulations. Although these statutes often do not mention the words “sex worker” or “prostitute”, they nevertheless give police wide latitude to arrest and detain sex workers and give the state legal support for making medical examinations compulsory—a fundamental human rights abuse. Sometimes, police use the mere possession of condoms as evidence of sex work. Even if sex workers are detained only briefly, their working lives are vexed by harassment and fear. These laws codify profound discrimination; they reflect general social contempt toward female, male and transgender sex workers.

CRIMINALISATION + STIGMA = DANGER

For sex workers, especially those who are gender-nonconforming, the threat of violence—from both clients and police—is a daily reality. Criminalisation, in collusion with social stigma makes sex workers’ lives more unstable, less safe
and far riskier in terms of HIV. There is no legal protection from discrimination and abuse where sex work is criminalised.

- Laws invite police harassment and violence and push sex work underground, where it is harder to negotiate safer conditions and consistent condom use. Some sex workers fear carrying condoms, which are used as evidence against them, sometimes as an explicit provision of law.
- Police violence prevents sex workers from seeking their assistance, which ingrains a culture of more client and police violence.
- Stigmatised, criminalised sex workers are unable to access programmes of HIV prevention and care.
- Criminals and clients deploy the threat of criminal sanctions to control and exploit sex workers.
- Rape and assault are difficult to report when the sex worker fears that she will be arrested, and sexual violence heightens exposure to HIV.
- Working in the informal sector reduces sex workers’ access to education and housing, thus increasing their dependence on others, including pimps.

**LEGAL “NON-PERSONS”**

Some laws not only criminalise sex work and the activities related to it but also deny sex workers fundamental civil entitlements. Sex workers may be unable to own or inherit property; register the births of their children; access education, justice, health care or banking services; or purchase housing or utilities. Deprived of the means by which others can make claims on elected officials, employers and service providers, sex workers experience social exclusion and entrenched poverty. And their disadvantaged position in

*Soon as the sex was over, the man started slapping me and cuffing me up and he empty my purse and take away all my money, not just what he pay me...How could I go to the police and make a report when sex work is not really legal?*

Sex worker from Guyana, Caribbean Regional Dialogue, 12–13 April 2011
negotiating access to goods and services leads to exploitation, abuse and increased vulnerability to HIV.\textsuperscript{158}

In such circumstances sex workers are not fully recognised as persons before the law and are rendered incapable of holding or exercising the range of human rights available to others. Swaziland provides a poignant example of law that denies the fundamental humanity of the sex worker. Section 3 (3) of the Swaziland Girls’ and Women’s Protection Act provides the following defence to the charge of carnal knowledge of a girl child under 16: “At the time of the commission of the offence the girl was a prostitute.”\textsuperscript{159} Under this law, a girl under the age of 16 cannot consent to sex, regardless of whether she is a sex worker, but she also cannot claim protection from the law if someone has sex with her against her will. By granting her neither agency nor security, the law renders her a non-person.\textsuperscript{160}

Virtually all of these conditions of work and life increase HIV vulnerability.\textsuperscript{161} It is not surprising that sex workers globally are approximately eight times more likely to be infected with HIV than other adults.\textsuperscript{162} A recent study found that female sex workers in developing countries are

\section*{VICTIMISING THE “VICTIM”}

\textbf{The Swedish Approach}

Lauded as a less punitive and more gender-sensitive legal strategy to reduce and ultimately eliminate sex work, the “Swedish approach” criminalises the client and not the worker. Based on the premise that women in sex work need protection, it regards the sex worker as the “victim” and the client as the “exploiter”. Since its enactment in 1999, the law has not improved—indeed, it has worsened—the lives of sex workers.\textsuperscript{163} The law’s record so far:\textsuperscript{164}

\textbf{Underground trade, more violence}

Street-based sex work is halved in Sweden, according to the police, but the sex trade remains at pre-law levels. It has simply moved further underground,\textsuperscript{165} to hotels and restaurants, as well as the Internet—and to Denmark. The Swedish State Criminal Department warns that the sex trade may now be more violent. Especially worrying is the trade in foreign women, who often fall entirely under the control of pimps.\textsuperscript{166}

\textbf{Few prosecutions and convictions}

Sweden’s Alliance of Counties says that resources for social work are scarce, as the money has been siphoned to policing. In spite of over 2,000 arrests, only 59 clients have been reported suspected of buying occasional sex. Only two have been convicted, after pleading guilty. No one has been jailed, and only low fines have been imposed, as per the law. Evidence to prove a crime is nearly unattainable. Workers do not consider themselves to be victims and are almost always unwilling to testify against their clients.\textsuperscript{167}

\textbf{Criticism and organising}

The law has given impetus to the formation of a sex workers’ rights organisation in Sweden, which has argued strenuously against the law.\textsuperscript{168} Some Swedish authorities are demanding an evaluation of how the new legislation is affecting the underground prostitution trade.
14 times more likely to be infected with HIV than women of reproductive age. Clients of sex workers also have sex with other partners, and sex workers have lovers and spouses and children, who in turn have sex or use drugs with others; consequently, HIV travels. High rates of infection among sex workers affect everyone.

This does not have to be the case. Where sex workers organise, where the police don’t harass them and they are free to avail themselves of quality HIV services, sex workers have lower rates of STIs, more economic power and a greater ability to get education for their children.

Criminal sanctions against human trafficking and commercial sexual exploitation of minors are essential—but the laws must clearly differentiate these activities from consensual adult sex work.

TRAFFICKING IN MISCONCEPTIONS

Sex work and sex trafficking are not the same. The difference is that the former is consensual whereas the latter coercive. Sex worker organisations understand sex work as a contractual arrangement where sexual services are negotiated between consenting adults. Sex work is not always a desperate or irrational act; it is a realistic choice to sell sex—in order to support a family, an education or maybe a drug habit. It is an act of agency.

By contrast, trafficking in persons, as defined by international and local treaties, is “the recruitment, transportation, transfer, harbouring or receipt of persons, by means of the threat or use of force or other forms of coercion, of abduction, of fraud, of deception, of the abuse of power or of a position of vulnerability or of the giving or receiving of payments or benefits to achieve the consent of a person having control over another person, for the purpose of exploitation”. Such exploitation can include many forms of forced labour or slavery—in factories, fields, homes or brothels. Trafficking for the purposes of commercial sexual exploitation involves adults or children providing sexual services against their will, either through force or deception. A denial of agency, trafficking violates their fundamental freedoms.

Setting aside the question of whether people would choose sex work if they had better options, a point of view that casts “voluntary prostitution” as an oxymoron erases the dignity and autonomy of the sex worker in myriad ways. It turns self-directed actors into victims in need of rescue.

And yet some governments deploy anti-human-trafficking laws so broadly as to conflate consensual adult sex work with the exploitative, coerced trafficking of people (primarily women and girls) for the purposes of sex. Indeed, negotiations in the writing of United Nations Protocol to Prevent, Suppress and Punish Trafficking in Persons, Especially Women And Children (2000) were riven by disputes over these definitions. Some states and NGOs argued for the language to be amended to limit the law’s purview to people engaged in the international sex trade by force or coercion. This amendment was defeated on the grounds that no victim should have to prove that she did not consent, but the language now also implies that any person selling sex is so vulnerable that she is by definition unable to consent. The definition now explicitly states that the consent of the “victim” is irrelevant to the prosecution of the trafficker.

In part as a result of this overly broad definition, governments have cracked down, often violently, on sex workers or compelled them to undergo the same kinds of brutal “rehabilitation” in detention to which drug users are subjected. Forced to work clandestinely, sex workers cannot muster the collective power to improve their wages or working conditions, enjoy the
International anti-human-trafficking campaigns often promote the prohibition, either intentional or effective, of proven best practices in HIV prevention. For instance, crusaders in the United States have used the influence of PEPFAR—the President’s Emergency Plan for AIDS Relief, the primary vehicle of United States financial support to AIDS-combating organisations around the world—to compel other governments to accept the conflation of human trafficking with sex work by conditioning the receipt of funds on the signing of its Anti-Prostitution Pledge.180 Maurice Middleberg, Vice-President of the Global Health Council, calls the pledge proof that the anti-human-trafficking agenda is an anti-prostitution agenda. He points both to the pledge’s language—which calls prostitution “harmful and dehumanising” and links prostitution with human trafficking—and the way the pledge has been put into practice.181

Although the pledge has been legally challenged in its application within the United States and was supposed to be reviewed by the Obama administration in early 2009, it remains in full force for organisations receiving funds under PEPFAR beyond the borders of the United States.182

WORKPLACE RIGHTS

The International Labour Organization (ILO) has recommended that sex work be recognised as an occupation so that it can be regulated in ways that protect workers and customers.183 Sex workers in such a framework could exercise both individual and collective initiative in affecting their economic and social conditions. The ILO’s labour standard on HIV/AIDS, adopted in 2010, includes non-discriminatory access to health services and occupational safety for sex workers, including empowerment to insist on safe and protected paid sex in their workplaces.184

Decriminalisation is the first step toward better working conditions—and with them, less HIV risk—and some jurisdictions have removed some penal provisions related to sex work. New Zealand’s Prostitution Reform Act (2003) decriminalised prostitution, opening the way for sex workers to operate in public and in safety.185 The New Zealand Prostitutes’ Collective, brothel operators and the Labour Inspectorate have collaborated to develop workplace health and safety standards for sex work. Sex workers can bring employment discrimination complaints to the Human Rights Commission, and the Mediation Service on Employment adjudicates disputes.186 The police support sex workers in

PEPFAR’s Anti-Prostitution Pledge

All organisations outside of the US receiving money under PEPFAR must sign the pledge. It reads, in part:

“The U.S. Government is opposed to prostitution and related activities, which are inherently harmful and dehumanizing, and contribute to the phenomenon of trafficking in persons. None of the funds made available under this agreement may be used to promote or advocate the legalisation or practice of prostitution or sex trafficking.”

The pledge puts grantees in an impossible bind. If they don’t sign, they are denied the funds they need to control and combat HIV. If they sign, recipient organisations are barred from supporting sex workers in taking control of their own lives—which is to say, their own health and that of their families and clients, including taking steps to avoid HIV and prevent its spread.
reporting violence. Although it applauds these advances, the Prostitutes’ Collective stresses that stigma and discrimination remain and calls for law and policy to address them. Recently, the Kenya National Commission on Human Rights called for the decriminalisation of sex work.187

Some national courts have recognised the rights of sex workers. A court in Bangladesh halted abusive action by police who evicted sex workers from brothels, concluding that this curtailment of their livelihood was a violation of their right to life.188 Similarly, in the 2010 case Bedford v AG Canada, a judge struck down three provisions of the Canadian criminal code outlawing prostitution, calling them a violation of the country’s Charter of Rights, as they “force prostitutes to choose between their liberty interest and their right to security of the person.”189 The subsequent 2012 decision of the Ontario Court of Appeal found that provisions prohibiting brothels and living off the avails of prostitution were both unconstitutional in their current form.190 In 2010, the South African Labour Appeal Court held that even though sex work was illegal, the people who do it were entitled to protection against unfair dismissal by employers.191

Unfortunately, decriminalisation sometimes replaces punishment with regulation, which in its details is enforced through criminal law. Greece, Latvia and parts of Australia all have mandatory and forced medical testing, a human rights abuse and thus a form of punishment.192 In the United States, Nevada is the one state where prostitution is legal. But sex work is allowed only in a few licenced brothels in rural counties. In the tourist hot spot Las Vegas, by contrast, police stings for solicitation are common, and anywhere in the state both workers and clients can be arrested for indecent exposure or “open and gross lewdness,” which carry penalties of fines and jail time.193, 194

According to an international labour rights advocate, “the direct regulation of sex work may or may not be implemented in ways consonant

THE DIGNITY OF ALL WORK

Kylie v Commission for Conciliation, Mediation and Arbitration and 2 others

Kylie, a sex worker who worked in a massage parlor, brought a claim before South Africa’s Labour Court that she had been unfairly dismissed without a hearing and deserved compensation from her employer. The Court rejected her claim, finding that she was not entitled to protection or redress because prostitution is illegal. The courts “ought not to sanction or encourage illegal activity”, it said. On appeal, however, Judge Dennis Davis ruled that Kylie could be awarded monetary compensation for her illegal firing, no matter what her job was. The Labour Relations Act (LRA) guarantees “everyone” the right to fair labour practices, he said—and everyone means everyone. The LRA’s express purpose “is to advance economic development, social justice, labour, peace and the democratisation of the workplace”, and he noted a purpose that is underlined by an even higher principle: the dignity of all workers. The judge opined: “As sex workers cannot be stripped of the right to be treated with dignity by their clients, it must follow that, in their other relationship—namely with their employers—the same protection should hold. Once it is recognised that they must be treated with dignity not only by their customers but by their employers, section 23 of the Constitution, which, at its core, protects the dignity of those in an employment relationship, should also be of application.”195
Police officers are now starting to think for the first time of sex work as having implications for human rights.

African Sex Workers Alliance (ASWA) Mozambique, Africa Regional Dialogue, 3–4 August 2011
RECOMMENDATIONS

To ensure an effective, sustainable response to HIV that is consistent with human rights obligations:

3.2. Countries must reform their approach towards sex work. Rather than punishing consenting adults involved in sex work, countries must ensure safe working conditions and offer sex workers and their clients access to effective HIV and health services and commodities. Countries must:

3.2.1 Repeal laws that prohibit consenting adults to buy or sell sex, as well as laws that otherwise prohibit commercial sex, such as laws against “immoral” earnings, “living off the earnings” of prostitution and brothel-keeping. Complementary legal measures must be taken to ensure safe working conditions to sex workers.

3.2.2 Take all measures to stop police harassment and violence against sex workers.

3.2.3 Prohibit the mandatory HIV and STI testing of sex workers.

3.2.4 Ensure that the enforcement of anti-human-trafficking laws is carefully targeted to punish those who use force, dishonesty or coercion to procure people into commercial sex, or who abuse migrant sex workers through debt bondage, violence or by deprivation of liberty. Anti-human-trafficking laws must be used to prohibit sexual exploitation and they must not be used against adults involved in consensual sex work.

3.2.5 Enforce laws against all forms of child sexual abuse and sexual exploitation, clearly differentiating such crimes from consensual adult sex work.

3.2.6 Ensure that existing civil and administrative offences such as “loitering without purpose”, “public nuisance”, and “public morality” are not used to penalise sex workers and administrative laws such as “move on” powers are not used to harass sex workers.

3.2.7 Shut down all compulsory detention or “rehabilitation” centres for people involved in sex work or for children who have been sexually exploited. Instead, provide sex workers with evidence-based, voluntary, community empowerment services. Provide sexually exploited children with protection in safe and empowering family settings, selected based on the best interests of the child.

3.2.8 Repeal punitive conditions in official development assistance—such as the United States government’s PEPFAR anti-prostitution pledge and its current anti-trafficking regulations—that inhibit sex workers’ access to HIV services or their ability to form organisations in their own interests.

3.2.9 Take decisive action to review and reform relevant international law in line with the principles outlined above, including the UN Protocol to Prevent, Suppress and Punish Trafficking In Persons, Especially Women And Children (2000).
Although the core international human rights treaties do not specifically mention sexual orientation as a category of protection like race or sex, MSM can be addressed under the category of “other status.” International law also protects the universal right to privacy, which guards people’s sexual practices from the interference of the state. The Yogyakarta Principles on the Application of International Human Rights Law in relation to Sexual Orientation and Gender Identity, although not binding on states, provide recommendations on how existing human rights statutes should be applied in specific situations relevant to sexual minorities. For instance, the Principles recommend that the medical records of sexual minorities be “treated with confidentiality” and that states “ensure that all health service providers treat clients and their partners without discrimination on the basis of sexual orientation or gender identity.”

There are those who argue that because sexual orientation or gender identity are not explicitly mentioned in any of the conventions and covenants, there would be no protection. My response is that such a position is untenable in legal terms, which is confirmed by the evolving jurisprudence. The principle of universality admits no exception. Human rights truly are the birth right of all human beings.

Navanethem Pillay, United Nations
High Commissioner for Human Rights

IMPRISONMENT AND EXECUTION

In defiance of international human rights standards, 78 countries make same-sex sexual activity a criminal offence, with half that number in the Commonwealth of Nations. Scholars trace hostility towards homosexuality and transgender people in many instances to colonialism and demonstrate that pre-colonial cultures were often much more tolerant of sexuality and gender diversity.

Penalties for adult consensual sexual conduct between two men range from jail time to execution. Jamaica punishes homosexuality with up to ten years’ imprisonment. Malaysia punishes “carnal intercourse against the order of nature” with up to twenty years’ imprisonment and whipping. And several sub-Saharan African countries can impose the death penalty on men convicted of having sex with men.
Even in jurisdictions where same-sex relations are not criminalised, the state extends no legal protection from discrimination on the grounds of sexual orientation; it is not uncommon for laws to allow minors to consent to "heterosexual" sex acts at younger ages than they allow minors to consent to "homosexual" acts.208

Progress on these issues has not been universal or sustained. In some instances, steps forward are followed by big steps backward. Uganda’s HIV response had shone as an exemplar of success. But recently a Member of Parliament proposed a draconian Anti-Homosexuality Bill, which would seriously jeopardise that programming.209 The law would impose penalties of life imprisonment for sexual acts between men. Through its clauses outlawing the “promotion” and “aiding and abetting” of homosexuality, it would criminalise working with MSM, thereby exposing field workers, peer educators and health care workers to arrest.210 Criminal sanctions could also be imposed on parents, teachers or health care workers who fail to report suspicion of homosexuality. International and domestic protest nearly killed the Bill. But as of the writing of this report in March 2012, Ugandan lawmakers have revived it for debate and a vote.211

HIGH RISK
Marginalisation, together with aspects of physiology, circumstance and sexual behaviour, puts MSM at significantly heightened risk of HIV. MSM are nineteen times more likely to be infected than other adult men.212 For instance, MSM are among the most hidden and stigmatised of all HIV risk groups in the Middle East and North Africa.213 In nearly every country that reliably collects HIV surveillance data,214 the figures are stark. Criminalisation both causes and boosts those numbers. For example, UNAIDS reports that in the Caribbean countries where homosexuality is criminalised, almost 1 in 4 MSM is infected with HIV. In the absence of such criminal law the prevalence is only 1 in 15 among MSM.215

Many MSM also have sex with women.216 Although some of these men are attracted to both women and men, others only maintain concurrent heterosexual relationships to avoid stigma and abuse, particularly in environments that criminalise or stigmatise homosexuality. In other words, criminalisation of same-sex relations endangers not just MSM, but women too.217 By contrast, evidence shows that in a range of epidemic settings, universal access to HIV services for MSM together with anti-discrimination efforts can significantly reduce infections both among those men and the wider community.218

The discourse on same-sex sexuality is dominated by hate speech at all levels, including the highest executive level. The Zimbabwean president, Robert Mugabe is known for comparing gays and lesbians to pigs and dogs. Police harassment is a daily occurrence, and homophobia exacted by religious and traditional leaders is deemed normal.

Gays and Lesbians of Zimbabwe, Zimbabwe, Africa Regional Dialogue, 3–4 August 2011
INSENSITIVITY, VIOLENCE, EXCLUSION

Stigma and discrimination against MSM pervade societies, and this erodes MSM’s access to HIV testing, treatment and social support. A multi-lingual global online survey of 5,000 MSM found that only 36% were able to easily access treatment and less than a third had easy access to behavioural interventions and HIV education materials. Religious law criminalising same-sex acts can decimate efforts to arrest the spread of HIV. Research shows that in Senegal after 9 MSM who were HIV prevention outreach work-
Men Who Have Sex With Men

Fears among MSM were arrested and imprisoned in 2008 under a law prohibiting “acts against nature”, terror gripped MSM communities, advocacy groups disbanded, HIV information and treatment sites shut down and workers and organisers went into hiding.220

MSM hardly feel welcome at the clinic. Health care providers are not exempt from ignorance or bigotry. MSM who fear that their sexuality will not be kept confidential do not divulge that information to health care workers, and this information is critically important in HIV-related prevention and care.221 Untrained health care workers respond to MSM with contempt or hostility and sometimes refuse to treat them.222 Where sex between men is illegal, health providers who want to offer services may worry that they will be charged with abetting a crime.223

Like sex workers or people who use drugs, MSM face harassment, arrest and police brutality in countries that outlaw their behaviour. Police raid educational forums and confiscate condoms and lubricants as evidence of sex crimes and informational materials as “obscenity.”224 Even when there are no sodomy laws or other restrictive legal structures, police inflict abuse under the aegis of “public sexual activity.”225

Thankfully, some MSM are starting to be heard. In Tunisia, for example, MSM are represented on the National Strategic Planning Committee; no doubt as a result, the 2012-2016 plan includes a call for decriminalising same-sex relations. Even in societies where homosexuality has traditionally not been accepted, more tolerant views are emerging. For instance, in March 2008, Siti Musdah Mulia, Islamic Scholar and Chairperson of the Indonesia Conference of Religions and Peace noted that “Homosexuality is from God and should be considered natural. It is not pushed only by passion. There is no difference. In the eyes of God, people are valued based on their piety. The essence of the religion (Islam) is to humanise humans, respect and dignify them.”

International leaders are also beginning to speak up for equality regardless of sexual orientation or consensual sexual acts, and courts around the world are looking to both global and national human rights standards to strike down laws criminalising same-sex activity. UN Secretary-General Ban Ki-moon, the Commission on AIDS in Asia and the UN Special Rapporteur on the Right to Health have all called for decriminalisation. The International Guidelines on HIV/AIDS and Human Rights recommend the review of laws that prohibit sex between consenting adults (including “sodomy”) in private, “with the aim of repeal”. A number of countries also prohibit discrimination on the basis of sexual orientation. While some countries are moving to more punitive approaches, there is growing international consensus that the decriminalisation of homosexuality is an essential component of a comprehensive public health response to the elevated risk of HIV acquisition and transmission among men who have sex with men.

We see a pattern of violence and discrimination directed at people just because they are gay, lesbian, bisexual or transgender. There is widespread bias at jobs, schools and hospitals. And appalling violent attacks, including sexual assault. People have been imprisoned, tortured, even killed. This is a monumental tragedy for those affected—and a stain on our collective conscience. It is also a violation of international law… To those who are lesbian, gay, bisexual or transgender, let me say: You are not alone. Your struggle for an end to violence and discrimination is a shared struggle. Any attack on you is an attack on the universal values the United Nations and I have sworn to defend and uphold. Today, I stand with you … and I call upon all countries and people to stand with you, too.

Ban Ki-moon, United Nations Secretary-General Statement to Human Rights Council, 7 March 2012
Lawsuits and rulings in both national and international courts are pushing this trend forward. The United Belize Advocacy Movement (UNIBAM) filed a suit in 2010 to overturn Criminal Code Chapter 101, Section 53, which states: “Every person who has carnal intercourse against the order of nature with any person or animal shall be liable to imprisonment for 10 years.”

In India in 2009, citing the Universal Declaration of Human Rights and the International Covenant on Economic, Social and Cultural Rights, the Delhi High Court removed the portions of the Indian Penal Code criminalising sex between adult men in private were found to have breached constitutional guarantees to personal privacy and equality.

In October 2011, AIDS-Free World, unbowed by Jamaica’s proscription of such actions in its own courts, filed a petition at the Inter-American Commission on Human Rights (IACHR) challenging that country’s anti-sodomy law. The “Offenses Against the Person Act” of 1864 criminalises consensual sexual conduct between men, as well as the “abominable crime of buggery” (anal sex) between people of any sex. And, on Human Rights Day, 2011, in a rare allusion to the legitimacy of sexual choice as a human right, United States Secretary of State Hillary Clinton suggested that it is only a matter of time before the world comes around to recognising everyone’s freedom to the consensual expression of desire, regardless of the sex of its object.

It is not easy or popular to call for the legalisation of homosexuality in many African countries, but it is the right thing to do. It is right because it is essential to slow the spread of HIV and to ensure that human rights protections are extended to all our citizens. But it is also right because people in Africa understand that the State has far more urgent priorities than interfering in the private lives of consenting adults.

Festus Gontebanye Mogae, former President of Botswana
RECOMMENDATIONS

To ensure an effective, sustainable response to HIV that is consistent with human rights obligations:

3.3. Countries must reform their approach towards sexual diversity. Rather than punishing consenting adults involved in same-sex activity, countries must offer such people access to effective HIV and health services and commodities. Countries must:

3.3.1 Repeal all laws that criminalise consensual sex between adults of the same sex and/or laws that punish homosexual identity.

3.3.2 Respect existing civil and religious laws and guarantees relating to privacy.

3.3.3 Remove legal, regulatory and administrative barriers to the formation of community organisations by or for gay men, lesbians and/or bisexual people.

3.3.4 Amend anti-discrimination laws expressly to prohibit discrimination based on sexual orientation (as well as gender identity).

3.3.5 Promote effective measures to prevent violence against men who have sex with men.
3.4 Transgender Persons

On 20 October 2008 at 11 A.M. the police caught five hijras [transgender women] near a traffic signal in the Girinagar police station and took them to the police station. The Assistant Commissioner of Police [ACP], H.T Ramesh beat one of them with his lathi, broke her bangles and made her bleed. Another hijra was forced to clean the floor of the police station. The police then charged them with false cases under section 341 [wrongful restraint] and 384 [extortion] of the Indian Penal Code...

The police asked offensive questions and taunted the crisis intervention team who went to the police station to assist: “Take off all your clothes; let me see what you’ve got there? Are you a man or woman?”

Sangama, India, Asia-Pacific Regional Dialogue, 16–17 February 2011

In many countries from Mexico to Malaysia, by law or by practice, transgender persons are denied acknowledgment as legal persons. A basic part of their identity—gender—is unrecognised. There are still few governments that issue identification documents in which a person’s self-identified gender may vary from his or her biological sex. Without documents, employment, health care, travel and participation in many aspects of citizenship are out of reach. In Thailand, for instance, transgender people who attempt national military conscription are dismissed under the ruling “This person’s body is not in line with their birth sex.”

The denial of papers is one of the most concrete, bureaucratic means by which the law erases the personhood of the transgendered. What is also prohibited in many states is the basic daily expression of self. In Guyana, cross-dressing is an offence. In Kuwait, anyone “imitating the opposite sex in any way” faces a year in prison, a substantial fine or both. It is not any specific behaviour that is criminalised, but rather physical appearance—the parameters of which Kuwaiti police may define. They commonly arrest people for “smooth skin” or “soft voice.”

TRANSPHOBIA AS A HEALTH RISK

These examples outline the ways the law punishes unconventional gender. Police may stand by while civilians commit acts of sexist violence against transgender people. According to the Trans Citizen Observatory of the
Santamaria Foundation of Colombia, “there were 45 registered and denounced homicides against transwomen in Santiago de Cali between 2005 and March 2011, the great majority of whom were sex workers.”

Often, states effectively condone the administration of violence by law enforcers. Transgender sex workers often bear the brunt of police brutality where sex work is criminalised. Beyond harassment, arrest and detention, transgender sex workers report that police extort sexual favours from them and rape and brutalise them. As with other key populations, complaints have nowhere to be lodged and, even when channels exist, the petitions of transgender people are often ignored. Police abuse of transgender people has been documented and complaints have been submitted to the National Commission of Human Rights and the Public Prosecutor’s Office. Taysa Fernandes, of Ángel Azul in Honduras, told the Commission, “without any results so far. . . . We have knocked on every door without receiving any help.”

All of this contributes to increased marginalisation, increased exposure to HIV and disproportionately rare use of HIV prevention, treatment, care and support services. In some countries transgender women become infected with HIV at more than seven times the national rate.

Transphobia, a bigotry often encoded in the law, is a mental health risk to its victims, data show. According to some research, transgender women and men show increased levels of depression and suicidal ideation, and emotional vulnerability can translate into vulnerability to HIV.

Like other sexual minorities, transgender people encounter difficulty at health centres. A United States–based survey of over 6,000 transgender people found that:

- Up to 28% of transgender people report postponing accessing health care when they are sick out of fear of discrimination
- 19% reported being refused care due to their transgender or gender non-conforming status
- 28% reported a perception of harassment in medical settings

But transgender people may never get in the clinic doors in the first place. A lack of official documentation recognising their gender identities prevents them, in many places, from registering for health care services.

PROGRESS

In a number of countries—including South Africa, Japan, Turkey, Belgium, Finland, Germany, Italy, Netherlands, Portugal, Romania, Spain, Sweden, United Kingdom, Mexico, Panama, Panama,

---

After my friend was raped by those men because she was discovered she came to me.... we went to the clinic to get post HIV exposure prophylaxis. The nurse told her to go home, take off her women’s clothes and come back. She was already so traumatised she could not return. I believe that is why she is HIV-positive today.

Transgender Sex Workers Cape Town, South Africa, Africa Regional Dialogue, 3–4 August 2011
Uruguay, Canada (most provinces), the United States, Australia and New Zealand—lawmakers have passed legislation that recognises transgender persons and their rights. Such rights include legal sex change, registration of identification documents in accordance with lived gender and prohibition of discrimination against people of non-conforming gender. Such rights enable transgender people to use national health care services, travel with greater ease, and expect protection from violence—all ways of reducing HIV risk or the poor health consequences of infection. Where explicit legal protection is not available through legislation, courts have recognised the right of people with alternative gender identities to be free from discrimination. Judgements from Fiji, Hong Kong, Nepal, Pakistan, Philippines, South Korea and other countries have explicitly noted the links between law, stigma and the social exclusion transgender people face.

In 2007 the Supreme Court of Nepal ordered the government to end the system that prevented transgender individuals from obtaining basic citizenship rights. In its ruling the court used the term “teshro Linki”—or “third gender”—to refer to transgender persons who feel neither female nor male. Among other legal changes, the judges ordered the repeal of penalties against cross-dressing. Cross-dressing, they said, is within an individual’s human right to freedom of expression. And in 2009, the Supreme Court of Pakistan held that transgender citizens should have equal rights and access to state benefits such as government financial support schemes and should enjoy protections guaranteed by the Constitution of Pakistan.

**SEX CHANGES**

*New laws recognise transgender identity*

**Argentina:** On 9 May 2012, the Senate unanimously approved the Gender Identity Law making sex-change surgery a legal right, as a part of public or private health care plans.

**Uruguay:** A 2009 law allows people over the age of 18 to change their name and sex on official documents.

**India:** Since 2005, passport applicants have had the option of identifying themselves as male, female or “others”, regardless of whether they have had a sex-change operation.

**Portugal:** In 2011 a law was enacted that regulates legal gender recognition. Under it, a person of Portuguese nationality who is over 18 can obtain his or her preferred gender using a standardised administrative procedure and a report from a multi-disciplinary medical team.
RECOMMENDATIONS

To ensure an effective, sustainable response to HIV that is consistent with human rights obligations:

3.4. Countries must reform their approach towards transgender people. Rather than punishing transgender people, countries must offer transgender people access to effective HIV and health services and commodities as well as repealing all laws that criminalise transgender identity or associated behaviours. Countries must:

3.4.1 Respect existing civil and religious laws and guarantees related to the right to privacy.

3.4.2 Repeal all laws that punish cross-dressing.

3.4.3 Remove legal, regulatory or administrative barriers to the formation of community organisations by or for transgender people.

3.4.4 Amend national anti-discrimination laws to explicitly prohibit discrimination based on gender identity (as well as sexual orientation).

3.4.5 Ensure transgender people are able to have their affirmed gender recognised in identification documents, without the need for prior medical procedures such as sterilisation, sex reassignment surgery or hormonal therapy.
The presence of the anti-buggery/gross-indecency law… precludes the distribution of condoms in Jamaican prisons with the result that the HIV prevalence rate among inmates is twice the national average. In 1997, the Commissioner of Corrections, on the advice of his prison doctor, proposed the distribution of condoms in the island’s prisons but was advised that he would be aiding and abetting a criminal offence, buggery. Condoms thus remain contraband in Jamaica’s prisons, although there are reports that prison warders do a thriving business trading in them. Prisoners who can’t afford to pay resort to the use of plastic bags.

Maurice Tomlinson, Jamaica, Caribbean Regional Dialogue, 12–13 April 2011

10 million people are incarcerated in prisons throughout the world—6 countries lock up at least one in every 200 residents, with the United States leading and many others close behind.

It could be said that HIV is a cellmate to each of these inmates. Tattooing with homemade and unsterile equipment, drug use and needle sharing, high-risk sex and rape all contribute to HIV rates among detainees that are estimated at twice to 50 times those of general adult populations. Overcrowding abets the spread of opportunistic infections and stress, malnutrition, violence and drugs weaken the immune system, making HIV-positive individuals more susceptible to getting ill.

Various forms of discrimination conspire to heighten such risks and make the reality even graver. In the United States, people of colour and African-Americans in particular, are imprisoned at rates vastly disproportionate to their numbers in the population. Between 1980 and 1996, male and female AIDS infection rates increased the most among demographic groups that experienced the largest increases in male incarceration rates, according to a paper from the University of Michigan’s National Poverty Centre. And because most people who serve time eventually get out—and often cycle in and out—prisoners’ HIV risks are shared by their communities.

International human rights law recognises the prerogative of the state to deprive people of certain rights—the most obvious one being liberty—through incarceration. But the human rights to humane treatment and dignity are not confiscated at the prison gate. Detainees have a right to a standard of health care equivalent to that available outside of prisons, and agents of the state have an obligation to refrain from inflicting harm...
I am certain that I was infected with both HIV and hepatitis C during my imprisonment for drug use in Chaing Mai men’s prison . . . where at least ten other prisoners and I shared homemade injecting equipment fashioned out of a pen barrel and needle, to inject heroin every day for the six months I was there. There was, and still is, no clean injecting equipment available in Thai prisons, or opiate substitution therapy or sterile tattooing equipment.286

Thai AIDS Action Group, Thailand, Asia-Pacific Regional Dialogue, 16–17 February 2011

CONDOMS CONTRABAND
Prisoners have sex behind bars, sometimes consensual, sometimes not. It is therefore the responsibility of prison authorities to provide all prisoners with condoms, as well as punish rapists who prey on other prisoners. But in countries where sodomy is outlawed, those authorities see distributing condoms to incarcerated men as abetting a crime.287 A 2009 study by the AIDS and Rights Alliance of Southern Africa (ARASA) found that where same-sex conduct was criminalised, only one government distributed condoms to prisoners.288 Criminalisation of drug use has a similar effect: countries refrain from providing harm reduction programmes in prisons.289

COMMON SENSE EXONERATED
A disproportionate number of people who end up in prison use drugs, and absent any positive intervention, they continue to do so behind bars. In 2005 WHO reported, for instance, that among European prisoners, as many as 3 of 4 were regular or dependent users, and as many as 1 in 2 was a lifetime user.290 In prisons, unsafe drug injection practices are the leading route of HIV transmission.291

Fortunately, the public health necessity—both for prisoners and their communities—of arresting the spread of HIV among inmates has prompted 12 countries spanning Western and Eastern Europe, the Middle East, North Africa and Central Asia292 to offer syringe-exchange programmes (SEPs) in prisons; at least 39 countries provide medication-assisted treatment (MAT).293 The results are encouraging. Since the implementation of SEPs in 50 prisons in Switzerland, all but one prison reported the eradication of syringe sharing.
among inmates. Evaluations of SEPs in European prisons overall indicate that drug use decreased or remained stable over time, with no new cases of HIV, hepatitis B or hepatitis C transmission reported. Opioid substitution therapies have also proven effective at reducing HIV risk behaviours in a wide range of prison environments, without negative consequences for the health of prison staff or prisoners.294

Under pressure from NGOs and other stakeholders, some governments have issued orders requiring improvements of medical care for detained persons with HIV. In Ukraine, patients in police custody must have access to substitution therapy. In the Republic of Moldova, the Ministry of Justice ordered prisons to provide confidential HIV care services, as well as transmission-preventive measures, including condoms and disinfectants for shaving, tattooing tools and injecting drug equipment.295

Where the state has not taken the initiative, legal actions by or on behalf of prisoners can force it to implement HIV prevention measures in prisons. For instance, in the 2000 case *Strykiwsky v. Mills and Canada*, Mr. Strykiwsky, a prisoner, sought access to methadone maintenance treatment for himself and all inmates of federal prisons who were medically eligible and wished to receive it. The respondents refused his request. He brought an application for judicial review of both that decision and the Correctional Service of Canada’s on-going refusal to implement a broader methadone maintenance programme within federal prisons. Two days after the court heard Mr. Strykiwsky’s case, Canada adopted such a policy for all its federal prisons. Thanks to the action of one prisoner, other inmates now can reduce their exposure to the risk of HIV.296
RECOMMENDATIONS

To ensure an effective, sustainable response to HIV that is consistent with human rights obligations, countries must ensure that in places of detention:

3.5.1 Necessary health care is available, including HIV prevention and care services, regardless of laws criminalising same-sex acts or harm reduction. Such care includes provision of condoms, comprehensive harm reduction services, voluntary and evidence-based treatment for drug dependence and ART.

3.5.2 Any treatment offered must satisfy international standards of quality of care in detention settings. Health care services, including those specifically related to drug use and HIV, must be evidence-based, voluntary and offered only where clinically indicated.
In globalised economies, millions are on the move—an estimated 214 million international migrants and 740 million internal migrants worldwide. Many hardships and some opportunities compel them from their homes—wars, poverty, natural disasters; up to 86 million people a year seek work away from home. Some migrants are entitled to refugee status or have legal work permits. But millions—some of them victims of trafficking—have moved illegally. They live without official recognition in their new homes.

Migration policies—restrictions on entry, stay and residence in a country—split families and isolate people from their peers, friends and known ways. These conditions disempower people, exposing them to exploitation, changing their sexual behaviours and increasing the likelihood of unsafe practices. As a result, migrants face a risk of HIV infection that is as much as 3 times higher than that faced by people with secure homes. Discrimination against migrants has a disproportionate impact on women, significantly increasing their vulnerability to HIV. Either they migrate themselves and face HIV risks where they travel or they await their husbands’ or partners’ returns from temporary or episodic migrations, sometimes infected with HIV. Furthermore, many migrants face discrimination and exclusion from health care systems, leaving them without access to treatment.

Sovereign states may establish migration restrictions. At the same time, although the core human rights treaties do not name migrants specifically, the right to liberty of movement grants everyone the liberty to stay or to leave their countries, to move within and between states and to choose a residence.

Although many developed countries in Asia and the Middle East rely on migrant workers to keep their economies functioning, they have instituted migration policies that use health as a primary criterion for permitting entry and stay of migrants for employment. The crux of these policies is that migrant workers coming from less developed countries must undergo mandatory or compulsory health testing as a screening process to identify those with any of up to twenty-two exclusionary health conditions including HIV.

CARAM, Asia-Pacific Regional Dialogue, 16–17 February 2011
In 2010 approximately 11% of all people living with HIV in Germany were migrants, and the trend is rising. A special situation is faced by HIV-positive migrants in Germany with no residence permit. In case they are in need of treatment they have two choices: either they start an application process for a residence permit, as this is obligatory to receive treatment (and bears the risk of deportation at the same time), or they decide to stay illegally—without treatment—and risk their lives.

Internationales Abteilung Strukturelle Prävention 2, Germany, High Income Countries Dialogue, 16–17 September 2011

The rights of migrant workers, whose labour supports the global economy, have been fully articulated in numerous international conventions. The International Labour Organization’s 1990 International Convention on the Protection of the Rights of All Migrant Workers and Members of their Families,306 for instance, spells out the right of migrant workers and their families “to receive any medical care that is urgently required for the preservation of their life or the avoidance of irreparable harm to their health on the basis of equality of treatment with national of the State concerned.” 307

Still, immigration laws and policies erect barriers to access to HIV services for migrants. Some states, like Japan, exclude non-citizens without permanent residency from national health care systems, including HIV care programmes.308 Botswana denies free ART to non-citizens.309 In the United Kingdom’s Immigration Removal Centres, where migrants can be detained indefinitely awaiting deportation or grant of asylum, there is evidence that people with HIV, many of them Africans, are also denied ART.310 In March 2012, the United Kingdom Department of Health announced that it would make HIV treatment free for all who need it, regardless of citizenship or immigration status, as long as the person seeking treatment has been in the UK for at least 6 months.311

FALSE SECURITY
A UNAIDS review of HIV-related entry, stay and residence regulations found that 10 countries refuse entry to HIV-positive people and 22 countries deport individuals if their HIV status

is discovered. 11 out of 30 countries from Eastern Europe and Central Asia have HIV-specific restrictions on entry, residence or stay in their legislation, such as mandatory testing. 10 out of 21 countries participating in the Commission’s High Income Country Dialogue have a history of such policies.

Blanket exclusions of people living with HIV are justified on the grounds of safeguarding public health. But evidence shows they do no such thing. In fact, such policies give the dangerous mistaken impression that “outsiders” are contaminated and citizens are pure, and that their health is secure so long as the borders are secured.

Since January 2010, countries including Armenia, Ukraine, the United States, Fiji, Namibia, the People’s Republic of China and the Republic of Korea have removed or lowered obstacles to the immigration of HIV-positive people. But there is a long way to go before these counterproductive, xenophobic regulations are abolished everywhere.

RECOMMENDATIONS

To ensure an effective, sustainable response to HIV that is consistent with human rights obligations:

3.6.1 In matters relating to HIV and the law, countries should offer the same standard of protection to migrants, visitors and residents who are not citizens as they do to their own citizens.

3.6.2 Countries must repeal travel and other restrictions that prohibit people living with HIV from entering a country and/or regulations that mandate HIV tests for foreigners within a country.

3.6.3 Countries must implement regulatory reform to allow for legal registration of migrants with health services and to ensure that migrants can access the same quality of HIV prevention, treatment and care services and commodities that are available to citizens. All HIV testing and STI screening for migrants must be informed and voluntary, and all treatment and prophylaxis for migrants must be ethical and medically indicated.
Women and girls account for half of the people living with HIV in the world; in Africa the proportion is even higher at 60%.317 In the regions with the highest rates, HIV strikes younger women and girls particularly hard—in the Caribbean and sub-Saharan Africa, for instance, their infection rates are more than double those of young men and boys. Poverty, both of individuals and of nations, plays its part. Almost all (98%) of HIV-positive women live in developing countries,318 and of the remaining 2% who live in developed countries, the majority are poor.319

Although HIV is still the leading cause of death in women of reproductive age (15 to 44) globally, death associated with pregnancy and childbirth (maternal mortality) is not far behind.320 Together, the two are a deadly conspiracy: nearly 1 in 5 maternal deaths is attributable to HIV.321

Why are women so vulnerable to HIV? Some of the reason is biological: younger girls especially are more susceptible to infection. But biology is not destiny. It is gender inequality and discrimination that is enshrined in custom and law, and sexual and domestic violence, which may be condoned by custom and law, that rob women of power. For example, child marriage, a

Three months after the birth of my son, he developed a heart problem and it was suggested he undergo surgery. My husband refused to have himself and the son tested for HIV but I made informed decision and choice for my son. I also voluntarily asked for HIV testing at the same time. Both my son and I tested HIV-positive. I cried uncontrollably, stopped thinking properly for a second, felt disconnected and just wanted to die because it was too much to handle. My husband informed his family members who came at the hospital where I nursing my son to emotionally abuse me and vowed to never set their eyes on my son and me. His family members told him to stop supporting us in any way and he did just that until the boy died at 2 years 2 months. My husband took all my belongings and moved from the house we rented. I reported the case of property grabbing at the police station but I was harassed by the police who could not understand my position. I decided to seek the courts of law to intervene in the matter of human rights violations and property grabbing.

Judith Kateule, Zambia, Africa Regional Dialogue, 3–4 August 2011
practice parents often believe will protect their daughters from HIV, actually exacerbates their risks. Older husbands may be infected from other relationships, and the child brides, lacking education, experience, knowledge or the chance of economic independence, are less able to negotiate safer sex or demand fidelity. According to the UN Special Rapporteur on Violence Against Women, a demographic and health survey of 26 countries found that “the majority of sexually active girls aged 15-19 in developing countries are married, and these married adolescents tend to have higher rates of HIV infection than their peers.”

In many countries, particularly in Africa and Asia, the situation for women is complicated by plural legal systems—that is, general laws that apply to matters in the public domain and codified customary/religious laws mostly concerning private and family life. Although most constitutions stipulate that constitutional law prevails when government and traditional law conflict, “customary laws and religious laws enjoy the status of binding sources of law in the vast majority of countries in the African region.” This combination of the colonial legacy and postcolonial political decisions can perpetuate or compound gender inequality and discriminatory practices that have “negative implications for [women’s] sexual health.”

In addition to these local conflicts, national governments have made exceptions to international covenants, such as CEDAW, on the grounds that they violate religious edicts or customary practices—although some women’s rights activists dispute the assumption that Islam (or other religions) compels or condones gender discrimination. Women may accede to the rule of these overlapping laws and customs out of fear of ostracism or violence if they do not, or (particularly rural and uneducated women) they may embrace them for themselves and their daughters. Still, the evidence is unequivocal: Gender inequality leaves women and girls undefended from HIV infection and diminishes their ability to cope with the consequences of illness and to care for themselves and their families.

Although gender norms and inequality primarily harm women and girls, men and boys also can pay dearly. New data shows that the rape of males is far more prevalent in conflict zones than previously understood. Cultures of machismo can pressure men into having sexual partners that they might not otherwise, discourage the use of condoms or non-penetrative sex and undermine men’s motivation to seek necessary health care. The protection and promotion of human rights for women and girls is in everybody’s interest.

VIOLENCE AND HIV
Sexual violence is the accomplice of HIV, depriving women of their ability to control their
lives and thereby protect their health. In fact, a 2005 WHO study found that in “a broad range of settings”, men who were violent toward their female partners were also more likely to have multiple partners—both violence and infidelity being expressions of male privilege—and to be infected with HIV and other STIs, putting all their female partners at risk. But although international human rights doctrine and jurisprudence unequivocally denounce sexual violence as cruel, inhuman and degrading treatment and a form of torture, and almost every nation criminalises it, the rape of women continues at alarming levels. Even where many forms of sexual violence are interdicted, the laws may be casually enforced or not enforced at all. Rape may be committed by police officers or uniformed service officers, making it impossible for victims to report the crimes or seek legal redress. And because the link between violence and HIV risk is not clearly acknowledged, survivors of violence fail to get timely HIV and health services, including medications to lessen the likelihood of contracting HIV.

Even where many forms of sexual violence are interdicted, the laws may be casually enforced or not enforced at all. Rape may be committed by police officers or uniformed service officers, making it impossible for victims to report the crimes or seek legal redress. And because the link between violence and HIV risk is not clearly acknowledged, survivors of violence fail to get timely HIV and health services, including medications to lessen the likelihood of contracting HIV.

Note: *Developed Regions include Andorra, Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Israel, Italy, Japan, Liechtenstein, Luxembourg, Malta, Monaco, Netherlands, New Zealand, Norway, Portugal, San Marino, Spain, Sweden, Switzerland, United Kingdom and the United States of America.

ual violence, the lack of multi-sectoral coordination between health and justice sectors leads to fragmented and ineffective services.339

But rape is no longer just a personal crime. Increasingly it is a chief weapon of military conflict.340 To break the women and girls is to destroy what holds a people together—from water-carrying to community-building. The spread of HIV through rape is all too effective a way of exhausting a people’s resilience for generations. Empowering women is necessary to the well-being of all people. It is crucial to fighting HIV.341 Violence against women and girls increases their vulnerability to HIV.342 Research in 4 provinces of Papua New Guinea, for example, showed a strong relationship between sexual abuse and a woman’s HIV-positive status. Women in the study who reported being sexually abused in their intimate partner relationships were twice as likely to be HIV-positive as women who were not abused.343 Forced sex in childhood or adolescence has been linked with increased probability of engaging in unprotected sex, having multiple partners, participating in sex work and using illegal substances later in life—all activities presenting heightened HIV risks.344 This connection is particularly disturbing because young women and girls are frequently the primary targets of sexual violence.345 In South Africa, police statistics show that more than 40% of rape survivors who reported their assaults to the police in 2002–2003 were girls under 18 years of age, and 14% were 12 or younger.346

Disclosure of positive HIV status also puts women at risk and in fear of violence, as numerous submissions to the Commission attest. A gang-raped Pakistani woman discovered that she was both pregnant and HIV-positive. Her husband, who was also poor and suffering from injuries, abandoned her and her twin sons.347 Education and class do not necessarily insulate women from such outcomes. A Tanzanian woman described a happy marriage to a professional man and a middle-class life. When she told him of her positive status, “he was very furious and started blaming me for our sons’ illness. He exposed me to a lot of stigma and torture. My health deteriorated. . . . My husband accused me for being the cause of the death of his relatives who died of AIDS. I was also expelled from the matrimonial house that I built with my own money. The divorce courts were of no help.”348

Women with HIV are not expected to fall pregnant. One day I could tell my doctor was angry. I had broken his trust when I said I was pregnant. He was disappointed. I had failed my doctor; I felt irresponsible and guilty. He said, "I don’t want you to go through this again.” So I was sterilised. I was the bad woman. I was HIV-positive. I compromised my health349

REPRODUCTIVE AND MATERNAL ILL HEALTH

Access to HIV and reproductive health services could substantially reduce both vertical transmission of HIV and maternal death. A combination of ARVs taken by a mother prenatally and during labour and breastfeeding has been shown to significantly reduce the chances of vertical transmission.351 Contraception—along with avoidance of unwanted pregnancy—also saves lives: it averted at least 40% of maternal deaths globally in 2008. Fulfilling the current unmet needs for contraception could prevent an additional 30% of such deaths.352 Yet the reproductive medical clinic is not a welcoming place for many HIV-positive women. Coercive and discriminatory practices in health care settings are rife, including forced HIV testing, breaches of confidentiality and the denial of health care services, as well as forced sterilisations and abortions.353
Since 2001, when forced and coerced sterilisation and abortion among HIV-positive women were first documented, reports have emerged from Chile, Venezuela, Mexico, Dominican Republic, Indonesia, Kenya, Namibia, South Africa, Tanzania, Thailand, Uganda and Zambia. Some women report being denied access to HIV and health services unless they agree to abortion or sterilisation.

Where HIV exposure and transmission are criminalised, pregnant women and mothers fear getting tested or treated for HIV or having their babies tested, lest they be prosecuted for passing on the virus. Kenya’s Sexual Offences Act, which criminalises HIV transmission “would effectively reduce the number of women going for antenatal care, and most mothers will prefer to have home delivery to avoid testing and reprisal by the health care providers”, said a representative of the Federation of Women Lawyers Kenya. Similarly, said an advocate from the Central African Republic, that nation’s law criminalising “reckless” transmission from knowing HIV-positive persons to others “implies that mothers can no longer breastfeed their children (while if they do not, the child is malnourished and dies, and this is considered an abuse).”

Human rights advocates have made gains against these counterproductive laws, such as the adoption of the Maputo Plan for Action and the increased availability of services to prevent vertical HIV transmission. However, few countries provide for a full range of sexual and reproductive health services to women and girls.

**PROPERTY WRONGS**

Without equal rights to acquire and secure property, a woman is effectively the captive of her husband and his family.

This is why numerous international covenants—including the International Covenant on Civil and Political Rights (ICCPR), the International Covenant on Economic, Social and Cultural Rights—protect women’s property rights.

In parts of Kenya, many widows and orphans become vulnerable to HIV when their husbands and fathers die, due to disinheritance by their families and communities, which leaves them destitute. [Many] are evicted from their rural homes and flee to urban areas where they find themselves vulnerable to further violence, including physical and sexual abuse, which increases their vulnerability to HIV. Often [they] resort to high-risk behaviour such as involuntary sex work in order to earn enough money to survive.

Allan Maleche, Kenya Legal & Ethical Issues Network on HIV and AIDS (KELIN), Kenya, Africa Regional Dialogue, 3–4 August 2011
(ICESCR) and the Convention on the Elimination of all Forms of Discrimination against Women (CEDAW)—guarantee equality between men and women in family life, marriage and its dissolution. Regional agreements also address laws and traditions that let men and their families take divorcees’ or widows’ property. The Protocol to the African Charter on Human Rights and People’s Rights on the Rights of Women in Africa specifically protects the right to “equal access to housing and to acceptable living conditions”; it requires States to “grant to women, whatever their marital status, access to adequate housing” and guarantees to widows “an equitable share in the inheritance of the property of her husband” and “the right to continue to live in the matrimonial home.” The Maputo Protocol also addresses women’s equal access to land and property.

Nevertheless, these international standards, or even the national statutes ratifying them, may have little or no effect. Both formal and customary marriage, property and inheritance laws, as well as unlawful “property-grabbing”—taking of a widow’s house and belongings by relatives of her husband—perpetuate gross gender inequality. Women are rendered economically dependent and unable to escape, which gives husbands control over their sexual lives. Just as property inequality increases women’s risk for HIV by denying her the ability to demand fidelity or condom use, studies from Africa and Asia also show that HIV-related stigma exacerbates property grabbing.

It is not her house or land that a wife, divorcée or widow risks losing under unjust property and

---

**SHARIA AND MALE PREROGATIVE IN NIGERIA**

The 1999 Constitution of Nigeria prohibits discrimination on the grounds of gender, but customary and religious laws continue to restrict women’s rights. Nigeria is a federal republic, and each state has the authority to draft its own legislation. Certain states in the north of Nigeria follow a particular school of Sharia, which may be invoked to reinforce customs unfavourable to women, thus increasing their vulnerability to HIV.

**Nigeria’s Sharia recognises four main types of divorce:**

- The *talaq* can only be initiated by the husband. It allows him to repudiate the marriage by announcing out loud that he intends to divorce his wife.
- The *khul’u* allows a woman to request a divorce by paying her husband in order to terminate the marriage. The *khul’u* is settled in court.
- The *tafriq* and *faskh* procedures also require court intervention. Divorce is pronounced following an investigation into the truth of the wife’s accusations.

**The Penal Code of Northern Nigeria,** based on their application of Sharia, allows a husband to:

- beat his wife, provided it does not rise to the level of “grievous hurt”
- withdraw economic support if his wife refuses sexual intercourse

**The Kano State Sharia Penal Code** requires a woman alleging rape to produce four witnesses to the rape. If the rape is not proved, she can be punished for adultery with imprisonment or flogging.
inheritance laws or customs. Customary practices may make her body the property of her husband or his relatives. Accepted in a number of countries in Africa and Latin America, as well as parts of Asia and the Middle East, customary practices include early marriage and female genital mutilation, “widow inheritance” and “sexual cleansing”—despite the increased risk of HIV exposure inherent in a number of these practices. Legal systems, whether governmental or traditional, generally fail to outlaw these activities. And women may either embrace them for cultural or religious reasons, or, fearing ostracism or economic ruin, feel forced to abide by them. The criminalisation of HIV transmission compounds the dangers of these practices and places women in a double-bind: if a woman is HIV-positive and then forced to have sex with her brother-in-law as a part of “widow inheritance”, she could be prosecuted for transmitting HIV to him.

RECONCILIATION

Undoing decades—even centuries—of traditions that weaken and oppress women—is a slow and incremental process. HIV both exposes pervasive gender discrimination and renders it deadlier than ever before. Some countries—Namibia, for example—are taking steps to remove marital exemptions as a defence to rape. A number of African countries, including Burkina Faso, Malawi, Mozambique, Niger, Rwanda and South Africa, are also moving toward ensuring women’s equal access to land and property, some with specific reference to HIV. In Tamil Nadu, India, a partnership among government, civil society and people living with HIV to provide legal services has improved access to property and land for women affected by or living with HIV. Courts in countries such as Tanzania, Uganda and Zimbabwe have overturned discriminatory customary and religious laws. But the new, “improved” statutes sometimes reflect the lawmakers’ reluctance to challenge customary law principles. Zimbabwe no longer accepts marriage to the victim as a defence for sexual crimes, for instance, but no prosecution of a husband for raping or indecently assaulting his wife can be instituted without the personal authorisation of the Attorney General. And where custom and tradition prevail, women do not feel the effects of progressive laws and judgements at the national level in their daily lives.

Perhaps the most promising route to change is adaptation of traditional legal systems to promote equality for women and their children and recruitment of respected community members to mediate inheritance disputes between widows and their in-laws. The Kenya Legal and Ethical Issues Network on HIV/AIDS (KELIN) is educating elders in alternative dispute resolution approaches and training them, as well as widows and local law enforcement officials, to create awareness of human rights. According to KELIN, the approach recognises that customary law evolves and can incorporate gender equality considerations, and that local mechanisms for enforcing customary law can be strengthened to facilitate the promotion and protection of women’s rights.

Inherent to the criminalisation of marital rape is the recognition that marriage is neither an irrevocable consent to sex nor a prophylactic against HIV infection, and that women—married or not—have a fundamental right to refuse sex or negotiate its terms. Without economic security and independence, women can never control their own destinies. And if they cannot, HIV transmission will not be brought to heel.
RECOMMENDATIONS

To ensure an effective, sustainable response to HIV that is consistent with human rights obligations:

4.1. Countries must act to end all forms of violence against women and girls, including in conflict situations and post-conflict settings. They must:

   4.1.1 Enact and enforce specific laws that prohibit domestic violence, rape and other forms of sexual assault, including marital rape and rape related to conflict, whether perpetrated against females, males or transgender persons.

   4.1.2 Take judicial or legislative steps to remove any immunity—or interpreted immunity—from prosecution for rape when the perpetrator is a married or unmarried partner.

   4.1.3 Fully enforce existing laws meant to protect women and girls from violence, and prosecute perpetrators of violence against women and girls to the full extent of the law.

   4.1.4 Formulate and implement comprehensive, fully resourced national strategies to eliminate violence against women and girls, which include robust mechanisms to prevent, investigate and punish violence. Provision of health services, including post-exposure prophylaxis, legal services and social protection for survivors of violence, must be guaranteed.

4.2. Countries must prohibit and governments must take measures to stop the practice of forced abortion and coerced sterilisation of HIV-positive women and girls, as well as all other forms of violence against women and girls in health care settings.

4.3. Countries must remove legal barriers that impede women’s access to sexual and reproductive health services. They must ensure that:

   4.3.1 Health care workers provide women with full information on sexual and reproductive options and ensure that women can provide informed consent in all matters relating to their health. The law must ensure access to safe contraception and support women in deciding freely whether and when to have children, including the number, spacing and methods of their children’s births.

   4.3.2 Health care workers are trained on informed consent, confidentiality and non-discrimination.

   4.3.3 Accessible complaints and redress mechanisms are available in health care settings.

4.4. Countries must reform property and inheritance laws to mandate that women and men have equal access to property and other economic resources, including credit. They must take measures to ensure that in practice property is divided without gender discrimination upon separation, divorce or death and establish a presumption of spousal co-ownership of family property. Where property and inheritance practices are influenced or determined by religious or customary legal systems, the leaders of these systems must make reforms to protect women, including widows and orphans.

4.5. Countries must ensure that social protection measures recognise and respond to the needs of HIV-positive women and women whose husbands have died of AIDS and that labour laws, social protection and health services respond to the needs of women who take on caregiving roles in HIV-affected households.

4.6. Countries must ensure that laws prohibiting early marriage are enacted and enforced.

4.7. The enforcers of religious and customary laws must prohibit practices that increase HIV risk, such as widow inheritance, “widow cleansing” and female genital mutilation.
Children and youth have the most to lose from HIV. They are far more likely to become poor or homeless, drop out of school, face discrimination and violence, see their opportunities dwindle, and grow ill and die long before their time. Their woes are many and complex and include malnutrition, expulsion from school, grieving for their parents and fearing their own mortality. But they also have the most to gain from successful HIV responses. Children and youth can be powerful agents of change in HIV prevention and in fighting stigma and discrimination. 377

Globally, there are 3.4 million children living with HIV, roughly 16.6 million who have lost one or both parents to AIDS and millions more who have been affected.379 Fewer babies are being born with HIV, thanks to an increase in programmes to prevent vertical transmission. Less than one quarter of children who qualified for ART actually got it in 2010. And still 2,500 young people acquire HIV every day.380

Many governments have affirmed society’s obligations to realise children’s right to equality, provide for their survival and development, promote their best interests and give them a meaningful say in matters affecting their lives. Since its adoption in 1989, an estimated 69 countries of the 193 parties to the Convention on the Rights of the Child (CRC)381 have enacted statutes affirming these principles. But not all governments are living up to their ideals. Few have actively promoted and funded programmes to benefit children infected or affected by HIV. Rarely does a government take full account of the realities of young people’s lives—including their sexual lives.

The needs of children in the epidemic are intimately bound to those of the adults who care for them. When parents or guardians are too sick to support or care for their children, the burdens of supporting the family, running the household and caring for sick parents or siblings may fall on the children themselves.

The reason people are vulnerable to HIV and AIDS is not because they are young, or homosexuals, or sex workers or injecting drug users. We are not somehow extra vulnerable to the virus. Yet, we carry the heaviest burden of the pandemic, because society repeatedly denies us access to sexuality education, commodities for contraception and decision-making when it comes to HIV and AIDS programmes. On the issue of rights, a lot of debate focuses on the need to strike a balance between the autonomy and universality of rights and the contexts that surround the realization of these rights. We should begin to name sexual rights without shame, as what is unnamed is more likely to be unsupported, ignored or misunderstood.
Older children, especially girls, are often forced to leave school to care for the family. For girls, this is a step backward, away from economic independence in later life, and it elevates the risks of HIV acquisition. Programmes around the globe have helped support older adolescents so that they do not drop out of school. Direct cash payments in Mexico, Malawi and Tanzania have accomplished that aim; in addition, such programmes have reduced rates of teenage pregnancy, STIs and HIV.

Discrimination against families living with HIV is common, as submissions to the Commission attest. Adults living with HIV may be denied visitation rights to see their children; agencies prohibit HIV-positive children from living with their parents in state-sponsored housing and school and child care administrators shut the doors to HIV-positive pupils, believing they will infect others. For example, in Paraguay, “people who suffer from chronic contagious disease” are forbidden to marry or adopt. Challenging these legal obstacles is a particularly important role of NGOs. For instance, Gidnist, the Ukrainian legal aid NGO, challenged the Ukrainian court to protect the rights of an HIV-positive child who was denied access to the paternal home. Thanks to this legal action, the child’s access to his paternal home was restored and the father was ordered to pay back payments for child support.

GOING HOME
When parents die, the state must ultimately ensure that their children’s human rights and legal interests are protected—the most important of which is to be cared for by responsible adults. Children who have lost parents to HIV live in diverse family systems and households (some formal, some not), so it is critical that the law recognise the parental rights and responsibilities of de facto caregivers, lest children be legally adrift, unable to access health care, education and social protection. In nearly every sub-Saharan country, according to UNICEF, relatives take in AIDS orphans—more than 90% of these children—“despite the great economic strain this has caused most households.”

It should not be forgotten that children orphaned by AIDS experience enormous emotional trauma. They need familial affection and normalcy in their lives. In partnership with the government, the All-Ukrainian Network of people living with HIV makes sure that HIV-positive children end up in family-based environments and that they stay in school. “By April 2011 in the Crimea, Ukraine, 6 children with HIV were brought up in foster care, 2 were adopted, 2 are under guardianship and 23 children born to HIV-infected women (affected by HIV) have found their families”, a representative of the Network told the commission.

A positive HIV diagnosis does not render an adult incompetent to take care of children. Yet the adoption applications of HIV-positive people (or same-sex couples) are commonly rejected. In some countries discrimination of this kind has been outlawed—as of course it should be everywhere, especially when so many children affected by HIV are waiting for homes. The Americans with Disabilities Act (ADA), for instance, prohibits adoption agencies from discriminating against couples or individuals living with HIV.
Where inheritance laws do not explicitly protect orphans and custom favours men in property ownership, the situation of AIDS orphans is dire. In Kenya, the lack of such legal protection for orphans has left them vulnerable to property grabbing by relatives under the pretext of informal guardianship. Property disputes can be interminable. In Tanzania, widows and orphans can “languish in the court corridors” for years, the Tanzania Women Lawyers Association told the Commission. “A good number meet their death before their disputes of inheritance in court are resolved.”

**AUTONOMY AND CONSENT**

Sexually active young people—for physiological, psychological and social reasons—are particularly vulnerable to HIV. They are in urgent need of appropriate prevention information and reproductive and sexual health services, as the UN Committee on the Rights of the Child has stressed. Adolescents who are gay or lesbian or who question their gender identities have specific needs—among them the support and guidance of gay, lesbian and transgender adults. Youth living with HIV, who may become infected either by birth to HIV-positive mothers...
or through sex or unsafe drug injection, have particularly complex needs. Focus groups with sero-positive youth in Botswana, for instance, found that they face stigma from classmates, friends and families; they may engage in risky sexual practices; and they have trouble coordinating the demands of schoolwork and health. In spite of legislation to the contrary, Botswana’s youth also may be refused HIV tests without parental involvement. Research in Canada, where 13,000 adolescents and young adults are living with HIV, found that such youth “experience higher than usual rates of homelessness, sexual and physical abuse, financial difficulties, addictions, and social isolation.” Nevertheless, programmes that support Canadian HIV-positive youth are scarce.

Many states deny youth health services without parental consent. The proponents of such laws say that they protect children (a broad category including everyone from birth to 18), but in reality fear of the disapproval and rage of their parents leads young people to avoid getting reproductive and HIV-related services. By contrast, a United States study showed a significantly higher proportion of young people volunteered for HIV testing once the legal requirement of parental consent was eliminated.

Contradictory attitudes about the competency of youth to make autonomous decisions are evident in the laws that govern minors’ sexual and medical lives. In a number of countries, children can lawfully have sex before the age at which they can get medical treatment without their parents’ consent. In other countries the laws putatively permit children to access sexual and reproductive health services below the age of consent to sex—except that their underage sexual activities must be reported to the police if they request such services. For example, in South Africa health care workers providing such services to minors are legally compelled to report consensual, underage sex. Such regulations frustrate the majority of STI and HIV prevention efforts for youth.

---

UNSAFE PRACTICES:
How not to respond to HIV risk

Lee had unsafe sex with his girlfriend to whom he had not disclosed his HIV status. He was concerned about the event and shared it with staff at his children’s home; they in turn reported it to the social services’ duty social work team. The duty team did not know how to respond and referred it to their manager. A child protection response was undertaken regarding the girl. There was a panic response, immediate action was considered necessary, strategy meetings were held between different managers within the children’s service and a significant number of social services staff then learnt about Lee’s HIV status. The girl’s parents learnt what had happened and began proceedings to prosecute for reckless transmission of HIV under Section 20 of the Offences Against the Person’s Act of 1861, although there was no evidence that transmission of HIV had taken place. Lee was referred to a specialist legal advisor. After this meeting he panicked and went straight to the police station and handed himself in. The police did not know what to charge him with and so charged him with sexual assault, although the girl was the same age as him and at this stage was still untested. The girl concerned was later tested by an adult sexual health service. She tested negative for HIV. Her parents and the police dropped all charges.

Looking After HIV, United Kingdom, 2008
SEX EDUCATION: THE MISSING LINK

Age-appropriate comprehensive sex education, including information on HIV prevention, serves the health of young people. Studies show that such programmes result in more frequent condom use, fewer sexual partners and significantly reduced sexual risk-taking. No studies find that sex education leads to earlier, riskier or more prolific sexual activity.406

At present, very few laws recognise the rights of young people to education about their sexuality or the risks of HIV.407 But, given the tensions among religious, cultural and political constituencies on what sex education should be, the law can advance children’s rights by establishing minimum standards for such programmes.408

In its zeal to act in the best interests of youth, the state may intervene to the point of unintentionally harming them. Children under the guardianship of the state are subject to intense surveillance, particularly of their sex lives, and the combination of punitive HIV-related statutes, official confusion and ambivalence over youth sexuality can exacerbate the difficulties of young people living with HIV, as an investigation by the United Kingdom’s Children and Young People HIV Network HIV-positive minors “looked after” by the local authorities found.409
RECOMMENDATIONS

To ensure an effective, sustainable response to HIV that is consistent with human rights obligations:

5.1. Countries must enact and enforce laws that:

5.1.1 Ensure that the birth of every child is registered. This is crucial for supporting children’s access to essential services. Ensure that their rights are protected and promoted, as per the Convention on the Rights of the Child.410

5.1.2 Ensure that every orphaned child is appointed an appropriate adult guardian. This includes provisions for transfer of guardianship of AIDS orphans from deceased parents to adults or older siblings who can ensure their well-being. In selecting a guardian, preference should be given to adults from the biological or extended families. HIV-positive adults who are otherwise in good health should not be prohibited from adopting children.

5.1.3 Support community-based foster care for children orphaned by AIDS as an alternative to institutionalisation, when formal adoption is not possible or appropriate.

5.1.4 Ensure HIV-sensitive social protections as required, such as direct cash transfers for affected children and their guardians.

5.1.5 Prohibit discrimination against children living with or affected by HIV, especially in the context of adoption, health and education. Take strict measures to ensure that schools do not bar or expel HIV-positive children or children from families affected by AIDS.

5.2 Countries must enact and enforce laws to ensure that children orphaned by AIDS inherit parental property. Children orphaned by AIDS should inherit regardless of their sex, HIV status or the HIV status of family members. Such enforcement includes:

5.2.1 Collaboration with the enforcers of religious and customary laws to ensure justice for children orphaned by AIDS.

5.2.2 Reconciliation of conflicts between discriminatory customary laws and traditional practices and international human rights standards to ensure compliance with international law.

5.3 Countries must enact and enforce laws ensuring the right of every child, in or out of school, to comprehensive sexual health education, so that they may protect themselves and others from HIV infection or live positively with HIV.

5.4 Sexually active young people must have confidential and independent access to health services so as to protect themselves from HIV. Therefore, countries must reform laws to ensure that the age of consent for autonomous access to HIV and sexual and reproductive health services is equal to or lower than the age of consent for sexual relations. Young people who use drugs must also have legal and safe access to HIV and health services.
ARVs and other medicines to counteract the effects of HIV and its co-infections make the difference between health and illness, productive life and early death. Second- and third-generation ARVs and medications for co-infections such as hepatitis C remain expensive. But the prices of first-generation ARVs have fallen dramatically over the past ten years, thanks primarily to increased marketplace competition from generic drugs. This translates into more people in low- and middle-income countries getting treatment—at the end of 2010, they numbered 6.65 million.412 And that means fewer HIV infections and related conditions, fewer deaths, fewer children orphaned due to AIDS and reduced expenditure for precariously sustained households and health systems.

**ENFORCING THE RIGHT TO HEALTH**

A number of countries have enacted specific laws protecting the right to health for people living with HIV or have achieved broad access to treatment through the courts. Brazil’s Constitution provides that “health care is a right of all citizens and the duty of State”, and in 1996 the federal government adopted Law 9313 guaranteeing affordable access to HIV treatment. This commitment has been crucial to the success of Brazil’s HIV response.413 In numerous other instances, courts have compelled governments to comply with their public health obligations under international and domestic law. In Venezuela, the Supreme Court has ruled more than once that the government violated the constitutional right to health by failing to guarantee access to ART for people living with HIV.414 In South Africa, the Treatment Access Campaign led and won a right-to-health lawsuit demanding that the government supply ARVs for the prevention of vertical transmission; indeed, the Constitutional Court went further and ordered the government to develop and implement a comprehensive program to reduce that risk.415

Such legal strategies, together with global advocacy and generic competition, resulted in a 22-fold increase in ART access between 2001 and 2010.416 While some pharmaceutical companies have entered into agreements to offer medicines at reduced prices, their actions cannot be credited for the dramatic rise in treatment. Rather, AIDS
treatment activists coordinated international campaigns to boost domestic and donor funding. This, coupled with competition from generic manufacturers like Cipla’s ‘game-changing’ offer to provide triple combination treatment for less than a dollar a day in 2001, greatly increased treatment coverage.

In spite of this remarkable achievement, the world is in the grip of a crisis in treatment affordability and accessibility. Of those who qualify under WHO guidelines to receive these life-saving medicines, fewer than half of HIV-positive adults and less than a quarter of children in need are getting them. Moreover, resources for HIV are declining and the global economic crisis is affecting the contributions of donor countries. The Global Fund to Fight AIDS, Tuberculosis and Malaria, one of two major financiers of the HIV response, recently announced that it had to postpone or cancel its entire next round of grants, from 2011 to 2013, because many donors are not honouring their commitments. There are also concerns about proposed cuts to PEPFAR funding for treatment. There will be a terrible price to pay in human lives. The costs of HIV prevention and care are modest, especially in comparison to the billions spent on bank bailouts or weaponry. If the global community is serious about ending the epidemic, it must spend what is required.

There are many reasons for this treatment gap. But a major one is the result of recent bilateral and multi-lateral trade agreements that have undoubtedly increased the power of pharmaceutical patent holders to control the prices of drugs on global markets. Governments, especially in low- and middle-income countries, cannot afford them.

Signed in 1994 and administered by the World Trade Organization (WTO), The Agreement on Trade Related Aspects of Intellectual Property

**GENERIC COMPETITION: MAKING ARVs AFFORDABLE**

Prices of first line antiretrovirals 2000–2010

- **lowest brand-name (originator) price**
- **generic competitor price**

Source: Médecins Sans Frontières (MSF), Untangling the Web of Antiretroviral Price Reductions (UTW), 14th edition, July 2011.
While the Commission’s mandate is HIV specific, people living with HIV are often co-infected with other communicable diseases including hepatitis C and Multiple Drug Resistant Tuberculosis. There is increasing evidence of the linkages between HIV and non-communicable diseases like cancer. Studies show that people living with HIV are up to 1000 times more likely than uninfected people to be diagnosed with Kaposi sarcoma, at least 70 times more likely to be diagnosed with non-Hodgkin’s lymphoma, and, among women, at least five times more likely to be diagnosed with cervical cancer. Given that similar problems around affordability and accessibility of treatment exist for communicable diseases and for a number of non-communicable diseases, the Commission’s findings and recommendations on HIV-related treatment have a broader relevance to health.

Rights (TRIPS) introduced IP protection and enforcement at a breadth never before seen at the multilateral level. The HIV epidemic has exposed the serious problems of applying TRIPS to medicines and other pharmaceutical products. This has implications well beyond HIV, for example, for non-communicable diseases which affect millions in high-, middle- and low-income countries.

But the trend in IP regulation continues to be away from more latitude for the production and
distribution of necessary medicines. A number of trade and investment agreements are incorporating even more stringent IP provisions, posing a serious threat to treatment access now and in the future.  

**TRIPS, DOHA AND THE 30 AUGUST 2003 DECISION: A BRIEF HISTORY**

Historically, countries retained the right to customise their IP laws to meet their development needs. After it declared independence, the United States, a net importer of technology at the time, did not allow foreigners to file patents for the first 37 years of nationhood. When the restriction on foreigners was eventually lifted, patent fees for foreigners were approximately tenfold higher (with an additional 65% charge for British nationals). Switzerland suspended its patent system from 1802 until 1888, when it re-established it under threat of trade sanctions from Germany. When a new law was passed, it contained a strong compulsory licensing mechanism and excluded certain products, including chemicals, from patent protection. Even as recently as the 1970s, Italy, Sweden and Switzerland did not grant patents for pharmaceutical products with Spain, only offering patent protection for pharmaceutical as late as 1992.

The TRIPS Agreement was born largely as a result of United States industry lobbying for strong multilateral IP protection covering a range of commodities. In 1986, when the negotiations leading to the agreement opened, as many as 50 countries provided no patents for pharmaceutical products. Countries were free to define many aspects of their IP regimes—for instance, to exclude entire fields of technology from patentability and determine the duration of patents in light of other public policy considerations. High- as well as low- and middle-income countries used this latitude to ensure that the interests of profit did not interfere with the maximal delivery of health care. In 1970 Brazil declared pharmaceutical products and processes non-patentable. In 1970, India implemented a similar policy that contributed to the development of a strong local pharmaceutical sector, a powerful machine of "reverse engineering" that has produced many of the generic medicines used in developing countries, and ensured that these medicines reached markets quickly and at an affordable price. Access to generics has proven critical to scaling up treatment access. For instance, in February 2001, the Indian generic manufacturer Cipla announced "a price heard around the world", offering a first generation combination regimen for as little as $350 per patient per year to NGOs and $600 per patient per year to African governments. A 2010 study found that Indian generic pharmaceutical companies supply at least 80% of ARVs purchased by low- and middle-income countries, including 91% of those formulated for children.

---

8 Patents confer exclusive rights granted for a limited time to an inventor for an invention - a creation of the mind that is novel, contains an inventive step and is industrially applicable. Patents were introduced to reward inventors for their work, to allow them to recuperate investments, and to stimulate innovation. Today, patents are often used to maintain exclusivity on the market, though patent exclusivity can be overcome through the use of TRIPS flexibilities.

9 Article 31 of the TRIPS Agreement recognises the right of WTO Members to use a patented product without the consent of the patent holder through "compulsory licences," "government use orders," or "compulsory licences to remedy anti-competitive practices."

10 Reverse engineering is the process of discovering the technological principles of a device, object, or system through analysis of its structure, function, and operation. It often involves taking a medicine or product apart and to try to make a new medicine or product that does the same thing without using or simply duplicating the original.
TRIPS imposed minimum standards for protecting and enforcing IP rights to an extent previously unseen at the global level. Today, all WTO Members, with the exception of least developed countries (LDCs), are required to provide a minimum of 20 years’ patent protection in all fields of technology, without distinction based on place of invention or country of manufacture. The intent of these regulations was supposedly to generate innovation and fairly balance the rights of consumers and patent holders. But for low- and middle-income countries, the adverse consequences have eclipsed any potential benefits. In essence, TRIPS imposed legally protected monopolies internationally. Limited competition resulted in higher costs for medicines. When the product is pharmaceuticals, the outcome for poor countries with overwhelming HIV epidemics and other health challenges has been catastrophic. It is an indictment of the current international IP regime that it has not resulted in increased innovation for medicines to treat HIV co-infections such as tuberculosis, hepatitis C or related diseases that predominantly affect the poor.

USING TRIPS FLEXIBILITIES: A Snapshot of Selected Countries

As the global economic crisis stretches on and international donor funding shrinks, national health systems are under increased pressure to reduce costs and increase both efficiencies and domestic investment. For all the shortcomings of TRIPS, certain countries still have the option of using so-called TRIPS flexibilities to make treatment considerably more affordable. These flexibilities were re-affirmed at a WTO round in 2001 that resulted in the Doha Declaration on TRIPS and Public Health. The declaration states that TRIPS should be interpreted and implemented in light of the goal “to promote access to medicines for all.” To that end, the Doha Declaration affirmed the rights of WTO Members to use “flexibilities,” including the rights to define standards of patentability and to order government use of patented inventions and issue compulsory licences to increase treatment access. Governments may also use competition law and policy to remedy abuses of IP rights.

In 2002, 2005 and 2007, treatment activists in South Africa used competition law to reduce the unaffordable prices of key first-generation ARVs. Between 2001 and 2006, the Brazilian government used the threat of compulsory licensing to negotiate significant price reductions for a number of ARVs. This saved the government approximately US $1.2 billion between 2001 and 2005. In 2007, Brazil issued a compulsory licence for the important ARV efavirenz, which was being used by more than a third of the 200,000 patients receiving treatment through the national health system’s HIV services. Thereafter, the price of the imported generic version of the drug dropped from US $1.60 to US $0.45 per dose. Thailand predicts it will realise a minimum savings of US$ 358 million by taking advantage of TRIPS flexibilities. Indian patent authorities used provisions of the Patent

---

1 The TRIPS Agreement contains provisions which allow countries to pursue their public health obligations without infringing the WTO law on pharmaceutical patents (flexibilities). Scholars divide such flexibilities into three categories: preventative, remedial and enforcement related. Preventative flexibilities are the opportunity to exclude certain categories for patentability (e.g. processes), applying strict patentability criteria to avoid low-quality patents, or extending the patent term through trivial modifications, pre-grant and post-grant patent oppositions. Remedial TRIPS flexibilities are: Compulsory licences and government use orders; the Bolar Exception (allows the preparation for manufacturing of a patented product before the expiration of the patent); parallel importation (allows access from cheaper sources); typical exceptions to patent rights (individual use, for experiments, etc.). Enforcement-related flexibilities focus on adhering to the minimum standards of TRIPS as far as patent infringement is concerned and not allowing unnecessary high levels of IP enforcement, especially criminal sanctions.
Act to reject a number of patent applications for new forms of known medicines that offer little therapeutic improvement—important not only for Indians but for the developing world as a whole, much of which uses India as its pharmacy.441

In spite of their potential benefits, TRIPS flexibilities have proved insufficient in obviating the shortages of affordable medicines that TRIPS itself has contributed to creating. The TRIPS Agreement, on paper, affords flexibility as to how its obligations are implemented by national governments. Nevertheless, in practice, the attempts by low- and middle-income countries to use measures to promote access to affordable medicines have been fraught with difficulty and met with retaliation and opposition from some high-income countries and corporations.442 For example, even though it scrupulously followed TRIPS requirements and national law, Thailand was placed on the United States Special 301 Priority Watch list for three straight years, at least in part because of having issued compulsory licences for a number of pharmaceutical products, including medicines to treat HIV, cancer and heart disease.443 When the government of Thailand issued a compulsory licence in 2007 on lopinavir/ritonavir (Kaletra), Abbott, the pharmaceutical company that held the patent for Kaletra, responded with an announcement that it was withdrawing multiple applications to obtain marketing approval for new drugs in Thailand, including a heat-stable version of Kaletra.444 Similarly, when South Africa passed a law in 1997 that allowed for parallel importation of cheaper medicines,445 thirty-nine pharmaceutical companies took the government to court alleging the law violated the South African Constitution and the TRIPS Agreement. South Africa was also placed on the Section 301 Special Watch List, a move that was revoked by then President Clinton via Executive Order,446 following extensive protests by activists and legal action. The Indian government remains embroiled in litigation with the company Novartis, which is seeking to overturn the state’s application of Section 3(d) of its Patent Code to reject a patent application on the Novartis cancer medicine Gleevec (imatinib mesylate).447

The Doha Declaration of 2001 also left unresolved a major problem: how to ensure access to medicines for countries that face patent bars but have limited or no domestic capacity to produce medicines locally, and thus are still dependent on medicines from countries where TRIPS rules limit exports to insufficient quantities. After 20 months of negotiation, the WTO General Council finally adopted a temporary solution: the 30 August 2003 Decision, a complicated set of regulations for overcoming these limitations. However, this decision has proven ineffective in practice. It has been used only once in more than 8 years.448 In fact, its effectiveness has been extensively questioned by low- and middle-income countries, such as Ecuador, Brazil and India, which argued at

the WTO TRIPS Council that detailed requirements such as pill colouring, additional labelling and website tracking of shipments produced under the mechanism are costly, time consuming and a disincentive for generic manufacturers. Despite attempts to persuade countries to ratify, only a minority of WTO Members have chosen to do so. Despite these criticisms, high-income countries, including the United States, the European Union and Canada, continue to support it.449

THE OVERREACH OF IP PROTECTION
Ten years after WTO Members unanimously reaffirmed their right to use TRIPS flexibilities for public health objectives through the Doha Declaration, certain governments and pharmaceutical companies are actively undermining the right and attempts of countries to use them. While the United States, the EU and Japan, among others, continue to undermine the Doha Declaration, they are attempting to increase IP enforcement in other forums as well—including the World Health Assembly, World Intellectual Property Organization, the World Customs Union and Interpol. Some high-income countries are also demanding that developing countries adopt commitments more stringent than those in TRIPS—so-called “TRIPS-plus provisions” in bilateral or plurilateral free trade agreements.

Stepped-up enforcement
Unilateral laws and policies by a number of developed countries stymie the efforts of developing countries to broaden treatment access. For instance, the EU adopted border regulations450 that resulted in the seizure or temporary detention of at least 17 shipments of generic medicines, most of them Indian, in 2007 and 2008. The shipments were seized on the grounds that they violated patents and trademarks in Europe, even though the products were destined for countries in which they would infringe no IP rights. The result was a disruption in the supply chain of legitimate generics, including HIV medicines, and likely cost increases due to changes in shipping patterns.451

Attention to IP enforcement is growing, as perverse as that may seem. One result is the recently concluded Anti-Counterfeiting Trade Agreement (ACTA), negotiated among a select group of predominantly high-income countries,452 with very little official information made available outside the group on the substance of the negotiations.453 The recently signed ACTA—whose completion the G8 nations have strongly pushed—adds a layer of IP protection significantly exceeding what is required by TRIPS. It is feared this could greatly threaten treatment access.454

Anti-counterfeiting laws
The recent proliferation of anti-counterfeiting legislation in East Africa, promoted by multinational pharmaceutical companies, reflects the increasing conflation of generic with counterfeit drugs—substandard formulations that endanger people who take them456—and the myth that generics are inferior to originator brands. In 2008, with support and applause from the multinational pharmaceutical industry, Kenya enacted a law that purported to address drug counterfeiting, but in fact dramatically expanded IP enforcement.457 Such laws are dangerous to countries in East Africa, which rely heavily on generic medicines.458 In fact, the laws alone do nothing to

The enforcement and application of the Anti-Counterfeit Act . . . will endanger the lives of Kenyan citizens afflicted with HIV and AIDS, as they will be arbitrarily denied access to affordable and essential drugs and medicine necessary to the fulfilment of the rights to life and human dignity that are enshrined in . . . the Constitution of the Republic of Kenya.

address the real problem of substandard medicines. Defective medicines mistakenly manufactured by a patent holder do not infringe the patent but are certainly public health hazards; an inspection by customs officials cannot reveal the defect. Drug quality, safety and efficacy issues have nothing to do with IP. They fall within the ambit of drug regulatory authorities and should be implemented by them.\textsuperscript{459} A recent judgment from the High Court of Kenya confirmed an earlier order preventing the implementation of the 2008 Anti-Counterfeit Act on the basis that the definition of “anti-counterfeit” within the Act did not clearly distinguish between counterfeit and generic medicines and thus could undermine access to affordable generic medicines. In her judgment, Lady Justice Ngugi ruled that intellectual property should not override the right to life, right to health and right to human dignity outlined in the 2010 Kenyan Constitution.\textsuperscript{460}

**Free trade agreements**

Free trade agreements (FTAs) and economic partnership agreements (EPAs) containing TRIPS-plus standards also threaten access to medicines. A case in point is the United States–promoted Transpacific Partnership Agreement (TPPA). Among other terms friendly to the United States pharmaceutical industry, the proposed patenting standards would allow patenting of new forms, new uses and new formulation of existing medicine; extend patent terms; and restrict the use of price control mechanisms. In another example, the proposed EU-India FTA would shrink the latitude of countries to adopt policies promoting the production and distribution of generic medicines. The United States trade stance, which threatens access to affordable medicines for millions of the world’s poorest people, is egregious given President Barack Obama’s professed commitments to increased economic equality and access to health care in the United States.

These TRIPS-plus provisions can be budget breaking, even for high-income countries.\textsuperscript{461} Canada is currently negotiating an FTA with the EU that could add a projected CDN$ 2.8-billion a year in extra costs to Canadian drug plans if various TRIPS-plus provisions are adopted.\textsuperscript{462} For countries with limited resources, the burden can be crushing. The US-CAFTA agreement, according to some projections, will increase Costa Rica’s public spending on ARVs at least 50% by 2030. Developing country governments negotiating FTAs are often forced to accept these IP terms in exchange for market access for their goods. Eager as they are for trade, low- and middle-income country governments must not be forced to exchange the “highest attainable standard of health” for access to developed country markets.

**CHANGING VALUES, NEW INCENTIVES**

TRIPS was meant to strike a balance between the rights of innovators and the rights of consumers. In reality, the balance has tipped dangerously in favour of the rights holders. To be sure, the research and development pipeline must remain open for future developments...
Today’s patent systems and the international agreements are intended to encourage innovation and reward inventors for their investments. But if the US experience is typical, they have not always succeeded in doing so. In other ways, however, the agreements are working as designed—that is, to enable producers of patented drugs to recover costs and generate monopoly profits by charging supra-competitive prices, which will be covered by consumers, governments or health insurance providers. What the IP regime does not factor in is that the majority of medicine purchases are made out of pocket in low- and middle-income countries by governments with limited health budgets. Accordingly, high prices create—in economic language—“dead-weight costs”, which, in the context of medicines, result in actual deaths.

But there is a pernicious myth at work. The myth is that stringent IP protection and enforcement are the necessary and unique means of encouraging the development of new pharmaceutical products. The evidence belies this claim. What has the patent-based free market produced? Sometimes, life-saving and life-enhancing innovations, such as new drugs for hypertension and diabetes. But often, pharmaceutical companies produce boutique
drugs to address the problems of people in wealthy countries—acne, wrinkles, restless leg syndrome, erectile dysfunction—and thousands of products and processes that offer only minor modifications of existing drugs or new uses of existing ones. According to a report of the United States National Institute for Health Care Management, from 1989 to 2000, only 15% of all new drug approvals were for medicines that provide a significant clinical improvement.

In the meantime, research and development (R&D) departments have neglected tropical diseases that sicken and kill millions because the potential consumers are poor. Indeed, in 2006 the WHO Commission on Intellectual Property, Innovation and Public Health asserted: “For diseases affecting millions of poor people in developing countries, patents are not a relevant factor or effective in stimulating R&D and bringing new products to the market.”

Proposals and programmes for improving the environment for innovation and access vary. The Global Fund and the United States President’s Emergency Program for AIDS Relief (PEPFAR) have created economic incentives for the development of generic drugs where patent bars do not exist or have been overcome. With increased generic competition and economies of scale in production, prices come down.

Recently, thirteen major pharmaceutical companies, with support from the Bill and Melinda Gates Foundation, the World Bank and other donors, pledged to invest in R&D to eliminate or control ten neglected tropical diseases in low-income countries, including river blindness and sleeping sickness, by 2020. The companies will also donate more existing drugs to countries in need.

These are decent, modest initiatives, but they cannot pretend to undo the damage done by TRIPS. Drug donations do not offer sustainable solutions; they leave the underlying problems unresolved. Innovation prize funds, a binding international treaty on R&D and open source drug discovery are initiatives that include some of the most promising proposals being studied by the Consultative Expert Working Group of the WHO. A recent report of the WHO Consultative Expert Working Group has called for countries to start negotiations on a binding international treaty on R&D. These nascent ideas hold the potential to yield more collaboration or broader access. In any scenario, it is essential that low- and middle-income countries participate meaningfully in this discussion.

But the crisis regarding access to medicines is not just a technical problem. It is an issue of law and politics. Many analysts question the most basic political, economic and moral assumptions underlying the reliance on TRIPS-based IP regimes as the mechanism to focus needed R&D for HIV drugs. They question whether the research silos and secrecy that mark phases of the IP-based system serve the interests of more efficient and scientifically rigorous research. They challenge the inclusion of pharmaceutical products in the same regime as movies and software and the perverse incentives in which the quest for life-saving medicines is mobilised by maximal profits for pharmaceutical monopolies rather than the unmet health needs of millions.
RECOMMENDATIONS

To ensure an effective, sustainable response to HIV that is consistent with human rights obligations:

6.1. The UN Secretary-General must convene a neutral, high-level body to review and assess proposals and recommend a new intellectual property regime for pharmaceutical products. Such a regime should be consistent with international human rights law and public health requirements, while safeguarding the justifiable rights of inventors. Such a body should include representation from the High Commissioner on Human Rights, WHO, WTO, UNDP, UNAIDS and WIPO, as well as the Special Rapporteur on the Right to Health, key technical agencies and experts, and private sector and civil society representatives, including people living with HIV. This re-evaluation, based on human rights, should take into account and build on efforts underway at WHO, such as its Global Strategy and Plan of Action on Public Health, Innovation, and Intellectual Property and the work of its Consultative Expert Working Group. Pending this review, the WTO Members must suspend TRIPS as it relates to essential pharmaceutical products for low- and middle-income countries.

6.2. High-income countries, including donors such as the United States, European Union, the European Free Trade Association countries (Iceland, Liechtenstein, Norway and Switzerland) and Japan must immediately stop pressuring low- and middle-income countries to adopt or implement TRIPS-plus measures in trade agreements that impede access to life-saving treatment.

6.2.1 All countries must immediately adopt and observe a global moratorium on the inclusion of any intellectual property provisions in any international treaty that would limit the ability of countries to retain policy options to reduce the cost of HIV-related treatment. Agreements such as the Anti-Counterfeiting Trade Agreement (ACTA) must be reformed; if ACTA is not reformed to exclude such intellectual property provisions, countries should not sign it. All countries must cease unilateral practices to this same, access-limiting end.

6.2.2 High-income countries must stop seeking to impose more stringent, TRIPS-plus intellectual property obligations on developing country governments. High income countries must also desist from retaliating against countries that resist adopting such TRIPS-plus measures so that they may achieve better access to treatment.

6.3. While the Commission recommends that WTO Members must urgently suspend TRIPS as it relates to essential pharmaceutical products for low- and middle-income countries, we recognise that such change will not happen overnight. In the interim, even though individual countries may find it difficult to act in the face of political pressure, they should, to the extent possible, incorporate and use TRIPS flexibilities, consistent with safeguards in their own national laws.

6.3.1 Low- and middle-income countries must not be subject to political and legal pressure aimed at preventing them from using TRIPS flexibilities to ensure that infants, children and adolescents living with HIV have equal access to HIV diagnosis and age-appropriate treatment as adults.

6.3.2 It is critical that both countries with significant manufacturing capacity and those reliant on the importation of pharmaceutical products retain the policy space to use TRIPS flexibilities as broadly and simply as they can. Low- and middle-income countries must facilitate collaboration and sharing of technical expertise in pursuing the full use of TRIPS exceptions (for instance, by issuing compulsory licences for ARVs and medicines for co-infections...
such as hepatitis C. Both importer and exporter countries must adopt straightforward, easy-to-use domestic provisions to facilitate the use of TRIPS flexibilities.

6.3.3 Developing countries should desist from adopting TRIPS-plus provisions including anti-counterfeiting legislation that inaccurately conflates the problem of counterfeit or substandard medicines with generics and thus impedes access to affordable HIV-related treatment.

6.3.4 Countries must proactively use other areas of law and policy such as competition law, price control policy and procurement law which can help increase access to pharmaceutical products.

6.4. The WTO Members must indefinitely extend the exemption for LDCs from the application of TRIPS provisions in the case of pharmaceutical products. The UN and its member states must mobilise adequate resources to support LDCs to retain this policy latitude.

6.5. The August 30, 2003 Decision of the WTO General Council has not proved to be a viable solution for countries with insufficient pharmaceutical manufacturing capacity. It is essential that the system established by that decision be revised or supplemented with a new mechanism, to allow the easier import of pharmaceutical products produced under compulsory licence. WTO Members should desist from ratifying the adoption of the August 30, 2003 Decision as a new Article 31 bis of the TRIPS Agreement, and they must pursue efforts to reform or replace the system.

6.6. TRIPS has failed to encourage and reward the kind of innovation that makes more effective pharmaceutical products available to the poor, including for neglected diseases. Countries must therefore develop, agree and invest in new systems that genuinely serve this purpose, prioritising the most promising approaches including a new pharmaceutical R&D treaty and the promotion of open source discovery.
In the 21st century, HIV is a manageable chronic condition—for some. However, like other preventable and remediable afflictions such as pneumonia, diarrhoea, malnutrition—it continues to sicken and kill far too many people who are vulnerable or marginalised.

From the beginning, the response to this epidemic has been driven by people living with HIV, populations disproportionately affected by AIDS, and their families and loved ones. Their tenacity, activism, creativity and solidarity created “safe sex” and “harm reduction”, pushed for medical and scientific advances and led to the rapid scale-up of international financing for the response to AIDS over the past decade. They provided the Commission with compelling evidence about how good laws and meaningful respect for human rights can foster the effective HIV responses necessary for sustainable development.

The world can always benefit from more evidence and from better tools and technologies. An “Investment Framework” published in 2011 demonstrates that modestly increasing and better targeting financial investments in HIV responses can turn the tide on the global epidemic over the next few years. New technology would be helpful, but establishing an enabling legal environment is of paramount importance—if money is not to be wasted.

The UNAIDS Reference Group on Human Rights recently argued that the “funding crisis is the most important human rights issue in the HIV response at this time. Paradoxically, funding is being flat-lined or reduced just as science, medicine and programmes are providing the tools for success against HIV.” Countries and international funding organisations must restore and boost the flow of resources to the HIV response. They must craft strategies from the best public health evidence and not be driven by ideologies. They must be realistic about the exigencies of lives limited by a paucity of choices. And they must respect the experience and intelligence of people living with HIV and their advocates.

In extending foreign aid and allocating domestic resources, governments must understand that the millions they invest in humane HIV responses can be quickly negated by political and material support provided to repressive legal environments in those same countries. Multilateral trade bodies cannot operate as if medicines were commodities like software or movies. Civil society must demand that the corporate quest for profits in trade agreements be subject to the requirements of universal human rights.

The world is porous. Oil, food, digitised data, capital and conflicts flow over borders—and so, ceaselessly, do people. HIV cannot be quarantined socially, economically or medically. The Commission’s recommendations exhort governments, donors, civil society, religious institutions and the United Nations to take up their obligations as world citizens who uphold human rights and hold each other accountable in doing everything possible to end AIDS.

Governments, in creating the legal environments that will enable the most effective and humane HIV responses, must honour the commitments they have made in international human rights agreements and in their own legislative bodies, and then go
The three elements of legal environments—law, enforcement and access to justice—are interdependent. It is best to pursue all three in simultaneous and coordinated fashion; contradictory laws and practices have gnarled efforts to combat HIV almost as much as have laws that are hostile or absent. But where governments are fragile and resources few, it is always worthwhile to work on one or two fronts, creating space to address all three in time. And even where legal reform may be deemed too complex and challenging, governments must protect human rights, punish police violence and support programmes to challenge stigma and discrimination against people with HIV, other key populations and those who are vulnerable.

Finally, religious institutions must be inspired by their best spirits and their ideals of love, compassion and service to others - common to all of the world’s spiritual traditions. If they do not, they will stand on the side of what can only be called evil: condemning others to illness and death because of their sexualities or identities, their occupations or even their frailties.

*Human immunodeficiency virus*: its first name is “human”. To defeat it, the world and its laws must embrace and promote what every living person shares: the fragile, immensely potent human rights to equality, dignity and health.
The law can have a profound impact on the lives of people. Many of the successes in mitigating the causes and consequences of HIV have taken root where laws have been used to protect the human rights of the marginalised and disempowered. For example, in some countries anti-discrimination laws have helped people living with HIV keep their jobs and their homes and look after their families. Laws to protect confidentiality have contributed to increasing confidence in health systems, encouraging people to learn their HIV status and to access HIV prevention and treatment. Legal guarantees of equal inheritance and property for women and girls have helped to mitigate the social and economic burdens of HIV. Still in many countries across the globe, the legal environment is presenting significant challenges for effective HIV responses, and preventing access to life-saving HIV treatment. Every day, people living with HIV, including sex workers, drug users, men who have sex with men, and transgender people, continue to suffer stigma, discrimination and violence. Laws and practices that discriminate against women or fail to protect their rights to be free from violence make women particularly vulnerable to HIV. While the rhetoric of rights based HIV responses has grown and there have been some success in advancing enabling legal frameworks in the context of HIV, human rights violations also continue with impunity. Globally, HIV responses are at a critical juncture, where an objective, independent analysis of the relationships between legal environments and HIV which provides concrete policy options for countries and communities could shape the next generation of AIDS, health and development responses. Consequently, the Programme Coordinating Board of Joint UN Programme on HIV/AIDS (UNAIDS) tasked the United Nations Development Programme, (UNDP), on behalf of the UNAIDS family, to establish an independent Commission on HIV and the Law.

The Global Commission on HIV and the Law aims to develop actionable, evidence-informed and human rights-based recommendations for effective HIV responses that promote and protect the human rights of people living with and most vulnerable to HIV. The Global Commission on HIV and the Law will interrogate the relationship between legal environments, human rights and HIV. The Commission will also focus on some of the most challenging legal issues in the context of HIV, including criminalisation of HIV transmission and behaviours and practices such as drug use, sex work and same-sex relations, legal and social status of women and access to HIV prevention and treatment services. The Global Commission on HIV and the Law will contribute to ensuring that law, human rights and HIV receive the interrogation and exposition necessary to facilitate universal access to HIV prevention, treatment, care and support in order to achieve the Millennium Development Goals (MDGs). Over a period of 18 months, the Global Commission on HIV and the Law will carry out the following:

- Analyse existing evidence on the relationships between legal environments and HIV, including an assessment of the current legal environments in countries, both punitive and enabling, and their impact on the lives of people living with HIV, key populations such as sex workers, people who use drugs, men who have sex with men, transgender people, and others who are vulnerable to and affected by HIV;
• Assess the medium and long term impacts of both punitive and enabling legal environments on HIV, health and development responses at country, regional and global levels;

• Consider the perspectives and experiences of governments, law and policy makers, law enforcers, civil society including those most marginalised and affected by HIV and communities; and

• Provide evidence-informed and actionable recommendations on legislative and policy reforms that need to be adopted at country, regional and global levels in order to mitigate the impact of HIV on individuals, households, and communities.

The findings and recommendations of the Global Commission on HIV and the Law will be summarized in a report that will be widely disseminated to national governments, civil society - especially people living with HIV and other key populations, and communities affected by HIV, the UN system especially the UNAIDS Cosponsors and UNAIDS Secretariat, and bilateral and multilateral donors, for effective implementation and monitoring.
1. President Fernando Henrique Cardoso (Brazil) – Chair
Fernando Henrique was the President of Brazil from 1995 to 2002. During this time, Brazil became one of the first developing countries to provide free anti-retroviral treatment to its citizens. Prior to this, he served as the Minister of Foreign Relations and Minister of Finance. In May 2012, it was announced that Fernando Henrique Cardoso would be awarded the John W. Kluge Prize for lifetime intellectual achievement in the humanities and social sciences.

2. His Excellency Mr. Festus Gontebanye Mogae (Botswana)
Festus Gontebanye Mogae was the president of the Republic of Botswana from 1998 to 2008. During this time, Botswana became the first African country to provide free anti-retroviral treatment to its citizens. Festus Gontebanye Mogae is Chairman of Champions for a HIV-Free Generation and is credited for being one of the first African leaders to publicly take a HIV test.

3. Ms. Ana Helena Chacon-Echeverria (Costa Rica)
Ana Helena Chacon-Echeverria has been the Coordinator of the Costa Rican Parliamentarian Group, Minister of Public Security and a Congresswoman. She has also been the vice-president of the Inter-American Parliamentary Group. She is a long-time advocate for women’s rights and rights of disabled people.

4. Mr. Charles Chauvel (New Zealand)
Charles Chauvel is a Member of Parliament in New Zealand. He is the shadow Attorney General and the Labour Party spokesperson for Justice and Arts, Culture & Heritage. He has also served on the New Zealand Public Health Commission and was a member of the New Zealand AIDS Foundation.

5. Dr. Shereen El Feki (Egypt) – Vice Chair
Shereen El Feki is an academic, writer and broadcaster whose current research focuses on sexual and reproductive health and life in the Arab region. She was also the Healthcare Correspondent for The Economist.

6. Ms. Bience Gawanas (Namibia)
Bience Gawanas was elected as the African Union Commissioner for Social Affairs. From 1991-1996, Bience Gawanas was a full time member of the Public Service Commission of Namibia. She was appointed Ombudswoman of Namibia in 1996 and held that position until 2003.

7. Hon. Dame Carole Kidu (Papua New Guinea)
Carol Kidu is the Leader of the Opposition in Papua New Guinea. She has been a Member of Parliament since 1997 and is the only woman in the 109 member Papua New Guinea Parliament. In addition to leading key legislative reforms, she has served as Minister of Community Development.

Full biographies can be found on-line at www.hivlawcommission.org
8. The Hon. Michael Kirby (Australia)
Michael Kirby was a judge in the High Court of Australia from 1996 - 2009. He also served as the Chairman of the Australian Law Reform Commission, the President of the International Commission of Jurists and the Special Representative of the United Nations Secretary General for Human Rights in Cambodia.

9. Hon. Barbara Lee (United States)
Barbara Lee has been a member of the United States Congress for over a decade. She was a co-author of the landmark legislation that created the President's Emergency Plan for AIDS Relief and has played a pivotal role in increasing domestic funding for HIV programmes, including the Minority AIDS Initiative.

10. Mr. Stephen Lewis (Canada)
Stephen Lewis is the co-founder of AIDS Free-World, an international advocacy organisation to promote a more urgent and effective response to HIV. He was the United Nations Secretary General’s Special Envoy for HIV/AIDS in Africa from 2001 - 2006. Stephen has also served as the Canadian Ambassador to the United Nations.

11. Professor Sylvia Tamale (Uganda)
Sylvia Tamale is a leading African feminist lawyer and scholar based in Uganda. She is a human rights defender and an advocate for the rights of women and marginalised communities. She has served as the Dean of the Faculty of Law at Makerere University.

12. Mr. Jon Ungphakorn (Thailand)
Jon Ungphakorn is a former Senator for Bangkok. His career has been dedicated to human rights and development issues in Thailand. He is currently the Vice-Chairperson of the Thai Foundation for AIDS Rights and a member of the Board of Governors of the Thai Public Broadcasting Service.

13. Professor Miriam K. Were (Kenya)
Miriam Were has been the Chair of the Kenya National AIDS Control Council and the African Medical and Research Foundation. She is a co-founder of UZIMA foundation - an organisation focusing on youth empowerment and HIV, and a member of Champions for a HIV-Free Generation.

14. Mr. JVR Prasada Rao (India)
– Member Secretary
Mr. JVR Prasada Rao was the Director of India’s National AIDS Control Programme from 1997 - 2002. He also served as Permanent Secretary in the Ministry of Health, Government of India and the Director of the UNAIDS Regional Support Team for Asia-Pacific. Mr. JVR Prasada Rao served as the Member Secretary of the Commission on AIDS in Asia and the Commission on AIDS in the Pacific. In May 2012, he was appointed the UN Secretary-General’s Special Envoy for AIDS in Asia and in the Pacific.
1. **The Hon. Michael Kirby (Co-Chair)**

Michael Kirby was a judge in the High Court of Australia from 1996–2009. He also served as the Chairman of the Australian Law Reform Commission, the President of the International Commission of Jurists and the Special Representative of the United Nations Secretary General for Human Rights in Cambodia.

2. **Allehone Mulugeta Abebe (Co-Chair)**

Allehone Mulugeta Abebe is an Ethiopian diplomat. He has a background in public health, human rights and international law. He has negotiated several multilateral, regional and international human rights instruments and resolutions. He is currently doing his doctoral research on internally displaced people in Africa.

3. **Aziza Ahmed**

Aziza Ahmed is Assistant Professor of Law at Northeastern University in Boston, Massachusetts. Her work focuses on issues of HIV, gender, sexuality, sexual and reproductive health and rights, and the intersection of public health and criminal law.

4. **Jonathan Berger**

Jonathan Berger is doing his pupillage in South Africa. He was a researcher at and head of policy and research at SECTION27, incorporating the AIDS Law Project. His Masters of Law degree focused on the relationship between access to HIV treatment, international trade law and constitutional law.

5. **Chris Beyrer**

Chris Beyrer is Professor of Epidemiology, International Health and Health, Behavior and Society at Johns Hopkins Bloomberg School of Public Health. He is the founder and Director of the Centre for Public Health and Human Rights at John Hopkins.

6. **Scott Burris**

Scott Burris is a Professor of Law at Temple University, where he directs the Centre for Health Law, Policy and Practice, and the Robert Wood Johnson Foundation’s Public Health Law Research program. His work focuses on how law influences public health, and what interventions can make laws and law enforcement healthier in practice.

7. **Joanne Csete**

Joanne Csete is senior program officer for the Global Drug Policy Program, Open Society Foundations (OSF). Prior to joining OSF, she was at Columbia University’s Mailman School of Public Health, where her research focused on health services for marginalised and criminalised populations, especially people who use illicit drugs, sex workers, prisoners and detainees, and people living with HIV.

8. **Mandeep Dhaliwal**

Mandeep Dhaliwal is the Cluster Leader: Human Rights and Governance in the HIV Group at UNDP. Prior to joining UNDP, she was a senior advisor to the Dutch Royal Tropical Institute’s Programme on AIDS, focusing on issues of HIV, health, human rights and law. She was the founding Coordinator of the Lawyers Collective HIV/AIDS Unit in India.

9. **Sophie Dilmitis**

Sophie Dilmitis has been living openly with HIV for 16 years. She has extensive experience working in the AIDS and women’s movements.
in Africa and globally. From 2006–2011, Sophie worked for the World YWCA as the Sexual and Reproductive Health and Rights and HIV Coordinator.

10. Vivek Divan
Vivek Divan is a lawyer from India. As the Coordinator of the Lawyers Collective HIV/AIDS Unit in India, he was part of the team which drafted India’s HIV/AIDS Bill. He was also closely involved in the research and community mobilisation work for the public interest litigation challenging India’s anti-sodomy law.

11. Richard Elliott
Richard Elliott is a lawyer and the Executive Director of the Canadian HIV/AIDS Legal Network. He currently holds a Community Leadership in Justice Fellowship from the Law Foundation of Ontario at the University of Toronto, Faculty of Law. Between 2001 and 2007, he was a member of the Ministerial Council on HIV/AIDS, an expert body advising Canada’s Federal Minister of Health.

12. Sofia Gruskin
Sofi a Gruskin directs the Program on Global Health and Human Rights at the University of Southern California, the USC Institute for Global Health, and holds appointments as Professor of Preventive Medicine at the Keck School of Medicine and as Professor of Law and Preventive Medicine at the Gould School of Law. She is also Adjunct Professor of Global Health, Department of Global Health and Population at Harvard.

13. Wendy Isaack
Wendy Isaack is a lawyer and human rights activist from South Africa. Her work has focused on women’s rights, specifically violence against women, and the rights of lesbian, gay, bisexual and transgender people. She has been actively engaged in human rights advocacy work with the African Commission on Human and Peoples’ Rights.

14. Rick Lines
Rick Lines is the Executive Director of Harm Reduction International. He is known for his work on prisoners’ rights, harm reduction, death penalty for drug offences, drug policy, HIV. He holds Masters Degrees in Sociology and International Human Rights Law.

15. Annie Madden
Annie Madden has been working in the areas of injecting drug use, HIV, hepatitis C, peer education and drug user representation for 20 years. She is the Executive Officer of the Australian Injecting & Illicit Drug Users League and a representative of the International Network of People who use Drugs.

16. Kevin Moody
Kevin Moody is openly living with HIV and has been the Chief Executive Officer of the Global Network of People Living with HIV since 2006. He started his career as a pharmacist in hospital and community pharmacies and has worked with the Medecins Sans Frontieres’ Campaign for Access to Essential Medicines.

17. Vitit Muntarbhorn
Vitit Muntarbhorn has been working at the Chulalongkorn University’s, Faculty of Law for over 30 years. He was the United Nations Special Rapporteur on the sale of children, child prostitution and child pornography from 1990-1994. His work focuses on human rights issues, including the rights of sexual minorities.
18. Cheryl Overs  
Cheryl Overs is the founder of the Global Network of Sex Projects. As a Senior Research Fellow in the Michael Kirby Centre for Public Health and Human Rights at Monash University and a member of the Paulo Longo Research Initiative, her work focuses on the impact of economic and legal conditions on sex workers health and human rights.

19. JVR Prasada Rao  
(Commission Member Secretary)  
Mr. JVR Prasada Rao was the Director of India’s National AIDS Control Programme from 1997 - 2002. He also served as Permanent Secretary in the Ministry of Health, Government of India and Director of the UNAIDS Regional Support Team for Asia-Pacific. Mr. JVR Prasada Rao served as the Member Secretary of the Commission on AIDS in Asia and the Commission on AIDS in the Pacific. In May 2012, he was appointed the UN Secretary-General’s Special Envoy for AIDS in Asia and in the Pacific.

20. Tracey Robinson  
Tracey Robinson is a Senior Lecturer in the Faculty of Law, University of the West Indies (UWI), Cavehill, Barbados. She has published in areas of family law, gender and citizenship, legal feminism, sex work, same sex sexuality, sexual harassment and intimate domestic relationships.

21. Purna Sen  
Purna Sen directs the Programme for African Leadership at the London School of Economics. She has almost thirty years’ experience on work to promote social justice, most recently as Head of Human Rights for the Commonwealth Secretariat and before that as Director for the Asia-Pacific Programme at Amnesty International. Previously she taught Gender and Development at the Development Studies Institute at the London School of Economics and worked on race equality in education.

22. Susan Timberlake  
Susan Timberlake is the Senior Human Rights and Law Advisor at UNAIDS. She started her career in the UN at the United Nations High Commissioner for Refugees (UNHCR) where she worked for nineteen years. At UNAIDS, her work focuses on promoting rights based approaches and enabling legal environments for HIV.

23. Matthew Weait  
Matthew Weait is a Professor of Law and Policy at Birkbeck College, University of London. His work focuses on the impact of law on people living with HIV, with a particular emphasis on the legal construction of responsibility and the relationship between law and human rights. He has published widely in the field of criminal law and HIV.
To ensure an effective, sustainable response to HIV that is consistent with human rights obligations:

1. **DISCRIMINATION**

1.1. Countries must ensure that their national HIV policies, strategies, plans and programmes include effective, targeted action to support enabling legal environments, with attention to formal law, law enforcement and access to justice. Every country must repeal punitive laws and enact protective laws to protect and promote human rights, improve delivery of and access to HIV prevention and treatment, and increase the cost-effectiveness of these efforts.

1.2. Where they have not already done so, countries must explicitly prohibit discrimination on the basis of actual or perceived HIV status and ensure that existing human rights commitments and constitutional guarantees are enforced. Countries must also ensure that laws and regulations prohibiting discrimination and ensuring participation and the provision of information and health services protect people living with HIV, other key populations and people at risk of HIV.

1.3. Donors, civil society and private sector actors, and the UN should hold governments accountable to their human rights commitments. Groups outside government should develop and implement rights-based HIV-related policies and practices and fund action on HIV-related law reform, law enforcement and access to justice. Such efforts should include educating people about their rights and the law, as well as challenging stigma and discrimination within families, communities and workplaces.

2. **CRIMINALISATION OF HIV TRANSMISSION, EXPOSURE AND NON-DISCLOSURE**

2.1. Countries must not enact laws that explicitly criminalise HIV transmission, HIV exposure or failure to disclose HIV status. Where such laws exist, they are counterproductive and must be repealed. The provisions of model codes that have been advanced to support the enactment of such laws should be withdrawn and amended to conform to these recommendations.

2.2. Law enforcement authorities must not prosecute people in cases of HIV non-disclosure or exposure where no intentional or malicious HIV transmission has been proven to take place. Invoking criminal laws in cases of adult private consensual sexual activity is disproportionate and counterproductive to enhancing public health.

2.3. Countries must amend or repeal any law that explicitly or effectively criminalises vertical transmission of HIV. While the process of review and repeal is under way, governments must place moratoria on enforcement of any such laws.
2.4. Countries may legitimately prosecute HIV transmission that was both actual and intentional, using general criminal law, but such prosecutions should be pursued with care and require a high standard of evidence and proof.

2.5. The convictions of those who have been successfully prosecuted for HIV exposure, non-disclosure and transmission must be reviewed. Such convictions must be set aside or the accused immediately released from prison with pardons or similar actions to ensure that these charges do not remain on criminal or sex offender records.

3. **KEY POPULATIONS**

3. To ensure an effective, sustainable response to HIV that is consistent with human rights obligations, countries must prohibit police violence against key populations. Countries must also support programmes that reduce stigma and discrimination against key populations and protect their rights.

**PEOPLE WHO USE DRUGS**

3.1. Countries must reform their approach towards drug use. Rather than punishing people who use drugs who do no harm to others, they must offer them access to effective HIV and health services, including harm reduction and voluntary, evidence-based treatment for drug dependence. Countries must:

3.1.1 Shut down all compulsory drug detention centres for people who use drugs and replace them with evidence-based, voluntary services for treating drug dependence.

3.1.2 Abolish national registries of drug users, mandatory and compulsory HIV testing and forced treatment for people who use drugs.

3.1.3 Repeal punitive conditions such as the United States government’s federal ban on funding of needle and syringe exchange programmes that inhibit access to HIV services for people who use drugs.

3.1.4 Decriminalise the possession of drugs for personal use, in recognition that the net impact of such sanctions is often harmful for society.

3.1.5 Take decisive action, in partnership with the UN, to review and reform relevant international laws and bodies in line with the principles outlined above, including the UN international drug control conventions: the Single Convention on Narcotic Drugs (1961); Convention on Psychotropic Substances (1971); the Convention against the Illicit Traffic in Narcotic Drugs and Psychotropic Substances (1988) and the International Narcotics Control Board.
SEX WORKERS

3.2. Countries must reform their approach towards sex work. Rather than punishing consenting adults involved in sex work, countries must ensure safe working conditions and offer sex workers and their clients access to effective HIV and health services and commodities. Countries must:

3.2.1 Repeal laws that prohibit consenting adults to buy or sell sex, as well as laws that otherwise prohibit commercial sex, such as laws against “immoral” earnings, “living off the earnings” of prostitution and brothel-keeping. Complementary legal measures must be taken to ensure safe working conditions to sex workers.

3.2.2 Take all measures to stop police harassment and violence against sex workers.

3.2.3 Prohibit the mandatory HIV and STI testing of sex workers.

3.2.4 Ensure that the enforcement of anti-human-trafficking laws is carefully targeted to punish those who use force, dishonesty or coercion to procure people into commercial sex, or who abuse migrant sex workers through debt bondage, violence or by deprivation of liberty. Anti-human-trafficking laws must be used to prohibit sexual exploitation and they must not be used against adults involved in consensual sexual work.

3.2.5 Enforce laws against all forms of child sexual abuse and sexual exploitation, clearly differentiating such crimes from consensual sexual work.

3.2.6 Ensure that existing civil and administrative offences such as “loitering without purpose”, “public nuisance”, and “public morality” are not used to penalise sex workers and administrative laws such as “move on” powers are not used to harass sex workers.

3.2.7 Shut down all compulsory detention or “rehabilitation” centers for people involved in sex work or for children who have been sexually exploited. Instead, provide sex workers with evidence-based, voluntary, community empowerment services. Provide sexually exploited children with protection in safe and empowering family settings, selected based on the best interests of the child.

3.2.8 Repeal punitive conditions in official development assistance—such as the United States government’s PEPFAR anti-prostitution pledge and its current anti-trafficking regulations—that inhibit sex workers’ access to HIV services or their ability to form organisations in their own interests.

3.2.9 Take decisive action to review and reform relevant international law in line with the principles outlined above, including the UN Protocol to Prevent, Suppress and Punish Trafficking in Persons, Especially Women and Children (2000).
MEN WHO HAVE SEX WITH MEN

3.3. Countries must reform their approach towards sexual diversity. Rather than punishing consenting adults involved in same sex activity, countries must offer such people access to effective HIV and health services and commodities. Countries must:

3.3.1 Repeal all laws that criminalise consensual sex between adults of the same sex and/or laws that punish homosexual identity.

3.3.2 Respect existing civil and religious laws and guarantees relating to privacy.

3.3.3 Remove legal, regulatory and administrative barriers to the formation of community organisations by or for gay men, lesbians and/or bisexual people.

3.3.4 Amend anti-discrimination laws expressly to prohibit discrimination based on sexual orientation (as well as gender identity).

3.3.5 Promote effective measures to prevent violence against men who have sex with men.

TRANSGENDER PERSONS

3.4. Countries must reform their approach towards transgender people. Rather than punishing transgender people, countries must offer transgender people access to effective HIV and health services and commodities as well as repealing all laws that criminalise transgender identity or associated behaviours. Countries must:

3.4.1 Respect existing civil and religious laws and guarantees related to the right to privacy.

3.4.2 Repeal all laws that punish cross-dressing.

3.4.3 Remove legal, regulatory or administrative barriers to formation of community organisations by or for transgender people.

3.4.4 Amend national anti-discrimination laws to explicitly prohibit discrimination based on gender identity (as well as sexual orientation).

3.4.5 Ensure transgender people are able to have their affirmed gender recognised in identification documents, without the need for prior medical procedures such as sterilisation, sex reassignment surgery or hormonal therapy.
**PRISONERS**

3.5.1 Necessary health care is available, including HIV prevention and care services, regardless of laws criminalising same-sex acts or harm reduction. Such care includes provision of condoms, comprehensive harm reduction services, voluntary and evidence-based treatment for drug dependence and ART.

3.5.2 Any treatment offered must satisfy international standards of quality of care in detention settings. Health care services, including those specifically related to drug use and HIV, must be evidence-based, voluntary and offered only where clinically indicated.

**MIGRANTS**

3.6.1 In matters relating to HIV and the law, countries should offer the same standard of protection to migrants, visitors and residents who are not citizens as they do to their own citizens.

3.6.2 Countries must repeal travel and other restrictions that prohibit people living with HIV from entering a country and/or regulations that mandate HIV tests for foreigners within a country.

3.6.3 Countries must implement regulatory reform to allow for legal registration of migrants with health services and to ensure that migrants can access the same quality of HIV prevention, treatment and care services and commodities that are available to citizens. All HIV testing and STI screening for migrants must be informed and voluntary, and all treatment and prophylaxis for migrants must be ethical and medically indicated.

**4. WOMEN**

4.1 Countries must act to end all forms of violence against women and girls, including in conflict situations and post-conflict settings. They must:

4.1.1 Enact and enforce specific laws that prohibit domestic violence, rape and other forms of sexual assault, including marital rape and rape related to conflict, whether perpetrated against females, males or transgender persons.

4.1.2 Take judicial or legislative steps to remove any immunity—or interpreted immunity—from prosecution for rape when the perpetrator is a married or unmarried partner.

4.1.3 Fully enforce existing laws meant to protect women and girls from violence, and prosecute perpetrators of violence against women and girls to the full extent of the law.
4.1.4 Formulate and implement comprehensive, fully resourced national strategies to eliminate violence against women and girls, which include robust mechanisms to prevent, investigate and punish violence. Provision of health services, including post-exposure prophylaxis, legal services and social protection for survivors of violence, must be guaranteed.

4.2. Countries must prohibit and governments must take measures to stop the practice of forced abortion and coerced sterilisation of HIV-positive women and girls, as well as all other forms of violence against women and girls in health care settings.

4.3. Countries must remove legal barriers that impede women’s access to sexual and reproductive health services. They must ensure that:

4.3.1 Health care workers provide women with full information on sexual and reproductive options and ensure that women can provide informed consent in all matters relating to their health. The law must ensure access to safe contraception and support women in deciding freely whether and when to have children, including the number, spacing and methods of their children's births.

4.3.2 Health care workers are trained on informed consent, confidentiality and non-discrimination.

4.3.3 Accessible complaints and redress mechanisms are available in health care settings.

4.4. Countries must reform property and inheritance laws to mandate that women and men have equal access to property and other economic resources, including credit. They must take measures to ensure that in practice property is divided without gender discrimination upon separation, divorce or death and establish a presumption of spousal co-ownership of family property. Where property and inheritance practices are influenced or determined by religious or customary legal systems, the leaders of these systems must make reforms to protect women, including widows and orphans.

4.5. Countries must ensure that social protection measures recognise and respond to the needs of HIV-positive women and women whose husbands have died of AIDS and that labour laws, social protection and health services respond to the needs of women who take on caregiving roles in HIV-affected households.

4.6. Countries must ensure that laws prohibiting early marriage are enacted and enforced.

4.7. The enforcers of religious and customary laws must prohibit practices that increase HIV risk, such as widow inheritance, “widow cleansing” and female genital mutilation.
5. CHILDREN AND YOUTH

5.1. Countries must enact and enforce laws that:

5.1.1 Ensure that the birth of every child is registered. This is crucial for supporting children’s access to essential services. Ensure that their rights are protected and promoted, as per the Convention on the Rights of the Child.

5.1.2 Ensure that every orphaned child is appointed an appropriate adult guardian. This includes provisions for transfer of guardianship of AIDS orphans from deceased parents to adults or older siblings who can ensure their well-being. In selecting a guardian, preference should be given to adults from the biological or extended families. HIV-positive adults who are otherwise in good health should not be prohibited from adopting children.

5.1.3 Support community-based foster care for children orphaned by AIDS as an alternative to institutionalization, when formal adoption is not possible or appropriate.

5.1.4 Ensure HIV-sensitive social protections as required, such as direct cash transfers for affected children and their guardians.

5.1.5 Prohibit discrimination against children living with or affected by HIV, especially in the context of adoption, health and education. Take strict measures to ensure that schools do not bar or expel HIV-positive children or children from families affected by AIDS.

5.2. Countries must enact and enforce laws to ensure that children orphaned by AIDS inherit parental property. Children orphaned by AIDS should inherit regardless of their sex, HIV status or the HIV status of family members. Such enforcement includes:

5.2.1 Collaboration with the enforcers of religious and customary laws to ensure justice for children orphaned by AIDS.

5.2.2 Reconciliation of conflicts between discriminatory customary laws and traditional practices and international human rights standards to ensure compliance with international law.

5.3. Countries must enact and enforce laws ensuring the right of every child, in or out of school, to comprehensive sexual health education, so that they may protect themselves and others from HIV infection or live positively with HIV.

5.4. Sexually active young people must have confidential and independent access to health services so as to protect themselves from HIV. Therefore, countries must reform laws to ensure that the age of consent for autonomous access to HIV and sexual and reproductive health services is equal to or lower than the age of consent for sexual relations. Young people who use drugs must also have legal and safe access to HIV and health services.
6. INTELLECTUAL PROPERTY LAW AND THE GLOBAL FIGHT FOR TREATMENT

6.1. The UN Secretary General must convene a neutral, high-level body to review and assess proposals and recommend a new intellectual property regime for pharmaceutical products. Such a regime should be consistent with international human rights law and public health requirements, while safeguarding the justifiable rights of inventors. Such a body should include representation from the High Commissioner on Human Rights, WHO, WTO, UNDP, UNAIDS and WIPO, as well as the Special Rapporteur on the Right to Health, key technical agencies and experts, and private sector and civil society representatives, including people living with HIV. This re-evaluation, based on human rights, should take into account and build on efforts underway at WHO, such as its Global Strategy and Plan of Action on Public Health, Innovation, and Intellectual Property and the work of its Consultative Expert Working Group. Pending this review, the WTO must suspend TRIPS as it relates to essential pharmaceutical products for low- and middle-income countries.

6.2. High-income countries, including donors such as the United States, European Union, the European Free Trade Association countries (Iceland, Liechtenstein, Norway and Switzerland) and Japan must immediately stop pressuring low- and middle-income countries to adopt or implement TRIPS-plus measures in trade agreements that impede access to life-saving treatment.

6.2.1 All countries must immediately adopt and observe a global moratorium on the inclusion of any intellectual property provisions in any international treaty that would limit the ability of countries to retain policy options to reduce the cost of HIV-related treatment. Agreements such as the Anti-Counterfeiting Trade Agreement (ACTA) must be reformed; if ACTA is not reformed to exclude such intellectual property provisions, countries should not sign it. All countries must cease unilateral practices to this same, access-limiting end.

6.2.2 High-income countries must stop seeking to impose more stringent, TRIPS-plus intellectual property obligations on developing country governments. High-income countries must also desist from retaliating against countries that resist adopting such TRIPS-plus measures so that they may achieve better access to treatment.

6.3. While the Commission recommends that WTO Members must urgently suspend TRIPS as it relates to essential pharmaceutical products for low and middle income countries, we recognise that such change will not happen overnight. In the interim, even though individual countries may find it difficult to act in the face of political pressure, they should, to the extent possible, incorporate and use TRIPS flexibilities, consistent with safeguards in their own national laws.

6.3.1 Low- and middle-income countries must not be subject to political and legal pressure aimed at preventing them from using TRIPS flexibilities to ensure that infants, children and adolescents living with HIV have equal access to HIV diagnosis and age-appropriate treatment as adults.
6.3.2 It is critical that both countries with significant manufacturing capacity and those reliant on the importation of pharmaceutical products retain the policy space to use TRIPS flexibilities as broadly and simply as they can. Low- and middle-income countries must facilitate collaboration and sharing of technical expertise in pursuing the full use of TRIPS exceptions (for instance, by issuing compulsory licences for ARVs and medicines for co-infections such as hepatitis C). Both importer and exporter countries must adopt straightforward, easy-to-use domestic provisions to facilitate the use of TRIPS flexibilities.

6.3.3 Developing countries should desist from adopting TRIPS-plus provisions including anti-counterfeiting legislation that inaccurately conflates the problem of counterfeit or substandard medicines with generics and thus impedes access to affordable HIV-related treatment.

6.3.4 Countries must proactively use other areas of law and policy such as competition law, price control policy and procurement law which can help increase access to pharmaceutical products.

6.4. The WTO Members must indefinitely extend the exemption for LDCs from the application of TRIPS provisions in the case of pharmaceutical products. The UN and its member states must mobilise adequate resources to support LDCs to retain this policy latitude.

6.5. The August 30, 2003 Decision of the WTO General Council has not proved to be a viable solution for countries with insufficient pharmaceutical manufacturing capacity. It is essential that the system established by that decision be revised or supplemented with a new mechanism, to allow the easier import of pharmaceutical products produced under compulsory licence. WTO Members should desist from ratifying the adoption of the August 30, 2003 Decision as a new Article 31 bis of the TRIPS Agreement, and they must pursue efforts to reform or replace the system.

6.6. TRIPS has failed to encourage and reward the kind of innovation that makes more effective pharmaceutical products available to the poor, including for neglected diseases. Countries must therefore develop, agree and invest in new systems that genuinely serve this purpose, prioritising the most promising approaches including a new pharmaceutical R&D treaty and the promotion of open source discovery.
ENDNOTES

5 All information about The Global Commission on HIV and the Law can be found on the Commission’s website www.hivlawcommission.org.

6 The Commission’s Technical Advisory Group (TAG) comprises 23 leading experts on HIV, public health, gender, human rights and law, including members of communities affected by HIV. More information about the TAG is available at: www.hivlawcommission.org.

7 During 2011, dialogues were convened in Asia-Pacific, Caribbean, Eastern Europe and Central Asia, Latin America, Middle East & North Africa, Africa and for High Income Countries.

8 Written submissions were analysed using NVIVO (research software for analysis of qualitative data), in order to identify and understand key trends and patterns in the qualitative data.

21 The right to equality and freedom from discrimination is protected by the Universal Declaration of Human Rights (1948), article 2: “Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind, such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status. Furthermore, no distinction shall be made on the basis of the political, jurisdictional or international status of the country or territory to which a person belongs, whether it be independent, trust, non-self-governing or under any other limitation of sovereignty” and the International Covenant on Civil and Political Rights (1966), e.g., Article 2(1) and 26. On the question of non-discrimination, see General Comment No. 18 of the Human Rights Committee in UN doc. HRI/GEN/1/Rev.5, Compilation of General Comments and General Recommendations adopted by Human Rights Treaty Bodies, p. 136, para. 12.

23 Article 1 of the Convention on the Rights of Persons with Disabilities states “Persons with disabilities include those who have long term physical, mental, intellectual or sensory impairments which in interaction with various barriers may hinder their full and effective participation in society on an equal basis with others.” Article 2 defines discrimination as: “any distinction, exclusion or restriction on the basis of disability which has the purpose or effect, on an equal basis with others, of all human rights and fundamental freedoms in the political, economic, cultural, civil or any other field” See R. Elliott, L. Utyasheva, and E. Zack, (2009), HIV, disability and discrimination: making the links in international and domestic human rights law, Journal of the International AIDS Society 12.

Endnotes   I   109

50 The relevant provision in the model law criminalises the willful transmission of HIV, which is defined as “the transmission of HIV virus through any means by a person with full knowledge of his/her HIV/AIDS status to another person”. The model provisions also impose specific obligations on people living with HIV, including the duty to disclose their status to their sexual partner(s) within six weeks. See also AWARE-HIV/AIDS (2004), Regional Workshop to Adopt a Model Law for STI/HIV/AIDS for West and Central Africa – General Report, September 2004, articles 1, 26 and 36; Pearshouse R., Legislation contagion: building resistance, HIV/AIDS Policy & Law Review, 13(2/3): 1–10. In 2008, UNAIDS published a document proposing amendments to certain problematic provisions of the N’Djamena model law and, by implication, national HIV statutes enacted in Sub-Saharan Africa. See UNAIDS, (2008), Recommendations for alternative language to some problematic articles in the N’Djamena model legis-

66 In Sweden the public health statute grants authority to authorities to intervene in the event a person is spreading, or is suspected of spreading, a communicable disease. See: Prosecution of HIV transmission, exposure and failure to disclose the status is based on the Swedish Penal Code 1962. There are further health regulations like the Swedish Communicable Diseases Act 2004 allows for forced isolation of HIV+ individuals deemed to be a 'threat' to others. See more information on http://www.sweden.gov.se/sb/d/15661/a/183500. [Accessed on 8 March 2012]. See also Danziger, R., (1998), HIV testing and HIV prevention in Sweden, British Medical Journal, Vol. 316, Issue 7127.

68 UNAIDS, UNDP, (2008), Policy brief on the criminalisation of HIV transmission (recommendations). Available at: http://data.unaids.org/pub/basedocument/2008/20080731 jc1513_policy_criminalisation_en.pdf See also Inter-Parliamentary Union, UNAIDS, UNDP, (2007), Taking Action Against HIV – A Handbook for Parliamentarians, No. 15; for the Swiss Statement produced on behalf of the Swiss National AIDS Commission: Garnett G., Gazzard B., (2008), Risk of HIV Transmission in Discordant Couples, The Lancet 372(9635): 270–271. Available at: http://www.natap.org/2008/HIV/072908_04.htm following a quashed conviction for transmission, the Geneva Court of Justice took into account both the honest belief that a defendant had as to his or her risk of onward transmission, and looked at the relevance of viral load, noting that in cases where the viral load is negligible a person should not be treated as infectious. The Court considered whether or not the person may not be considered reckless if they engage in sex with a possibility of transmission.

70 In Sweden, the policy requires that there shall be no prosecution unless the scientific evidence supporting the allegation is sufficiently robust and the defendant knew he or she was HIV positive. An expansive definition of “knowledge” is used so that “willful blindness” to the fact of infection may be insufficient. Evidence that the defendant used appropriate precautions would normally preclude a charge. See: RFSU, RFSL, (2011), HIV-Sweden, HIV, Crime and Punishment, Sweden.

71 Phylogenetic analysis examines small differences in HIV’s genes using computational methods to calculate the genetic distance between strains. Unlike human DNA, which remains stable for a lifetime, HIV’s RNA changes very rapidly, leading to a huge amount of genetic diversity. This diversity means that scientists, using phylogenetic analysis, have been able to ascertain where HIV comes from, as well as track the various strains of HIV that exist worldwide. See Bernard, EJ., et al., (2007), HIV Forensics: The use of phylogenetic analysis as evidence in criminal investigation of HIV transmission, NAM/NAT (National AIDS Trust). http://www.nat.org.uk/Media%20library/Files/PDF%20Documents/HIV-Forensics.pdf

159 Girls and Women’s Protection Act 39, 1920. See Gallinetti J., (2007), ‘Harmonisation of laws relating to children Swaziland’, The African Child Policy Forum, 5 November 2007. Available at: www.africanchildpolicy.org. The offence under section 3(1) of the Swaziland Girl’s and Women’s Protection Act is as follows: “Every male person who has unlawful carnal connection with a girl under the age of sixteen years or who commits with a girl under that age immoral or indecent acts or who solicits or entices a girl under such age to the commission of such acts shall be guilty of an offence and liable on conviction to imprisonment not exceeding 6 years with or without whipping not exceeding 24 lashes and with or without a fine not exceeding one thousand Emalangeni in addition to such imprisonment and lashes.” Section 3(3) provides defences to such a charge, one of which is that at the time of the commission of the offence the girl was a prostitute. See also, High Court of Swaziland, R. v. Mbhamali, Crim. Case No. 143/02 (2004). Available at: http://www.swazilii.org/files/sz/judgment/high-court/2004/176/SZH_2004_176.pdf [Accessed on 4 July 2012].

164 BAYSWAN also reports that the law has given impetus to the formation of a sex workers’ rights organization in Sweden: http://www.bayswan.org/swed/flashback_sweden.html [Accessed on 6 March 2012].

184 Ibid.

185 New Zealand Prostitution Reform Act 2003, Part 2 Commercial Sexual Services, Sections 8 and 9. See Section 8(1) (a): “(1) Every operator of a business of prostitution must—
(a) take all reasonable steps to ensure that no commercial sexual services are provided by a sex worker unless a prophylactic sheath or other appropriate barrier is used if those services involve vaginal, anal, or oral penetration or another activity with a similar or greater risk of acquiring or transmitting sexually transmissible infections”, and see Section 9(1): “(1) A person must not provide or receive commercial sexual services unless he or she has taken all reasonable steps to ensure a prophylactic sheath or other appropriate barrier is used if those services involve vaginal, anal, or oral penetration or another activity with a similar or greater risk of acquiring or transmitting sexually transmissible infec-

194_erratum: In the originally published version of “Risks, Rights and Health”, the following sentence was included on p. 41: “In New Zealand, sex work has recently been prosecuted under the same law that officially decriminalises it.” The sentence is not accurate and has been deleted from current on-line versions of the report (20 July 2012).

195 Ibid. For example, the Contagious Diseases Act passed in Britain in 1864 required that prostitutes living and working close to military encampments be tested for venereal disease, and forcibly confined to “lock hospitals” for a course of treatment if determined to be infected and contagious. A similar, but even more draconian proposal was contained in a bill presented to the legislature of the state of Maharashtra, in India: it would have required the registration of all prostitutes, with compulsory HIV test-

201 Consider, for example, Article 2 of the Universal Declaration of Human Rights: “Everyone is entitled to all of the rights and freedoms set forth in this Declaration, without distinction of any kind, such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth, or other status” [emphasis added]; Article 2 of the African Charter on Human and Peoples’ Rights: “Every individual shall be entitled to the enjoyment of the rights and freedoms recognised and guaranteed in the present Charter without distinction of any kind such as race, ethnic group, colour, sex, language, religion, political or any other opinion, national and social origin, fortune, birth or any status” [emphasis added]; and Paragraph 20 of the Explanatory Report accompanying Protocol No. 12 to the European Convention for the Protection of Human Rights and Fundamental Freedoms, which specifies that the list of grounds of non-discrimination in Article 14 of the Convention is not exhaustive and notes that the European Court of Human Rights had already applied Article 14 in relation to discrimination on grounds not explicitly mentioned in that provision, including sexual orientation.

202 Principle 17 (right to the highest attainable standard of health); Information about the Yogyakarta Principles are available at: www.yogyakartaprinciples.org/index.html [Accessed on 6 March 2012].

365 Procedures that involve partial or total removal of the external female genitalia or other injury to the female genital organs for non-medical reasons. It is widely practised in Africa, in some countries in Asia and the Middle East and in the Arabian peninsula, Australia and Latin America.

366 A traditional practice whereby a woman, upon widowhood, is ‘inherited’ by her husband’s brother. The practice was historically aimed at providing for a widow and her children, but recent practices tend to coerce women into sexual relationships with their inheritors. It has been recorded in many African countries such as Kenya, Zimbabwe, Malawi, Zambia, Namibia, and Uganda.

367 A sexual act by a male relative of the husband that is believed to purify the recipient through semen entering the woman’s body. The practice is common for widows after the death of their husbands. It has been documented in many African countries such as Kenya, Malawi, Zambia, and Botswana.

369 “There is a girl in one of the communities of Mzimba district who was forced into marriage, her name is withheld. She drops out of school where she strongly anticipated to change her future, after completion of her education. After two years she discovered that she was HIV positive which she optimistically sure get from the man. The girl live a misery life and full of fear without any hope as she’s afraid that she will die soon as expected”, James Wilson Phiri, Malawi, for the Africa Regional Dialogue, 3–4 August 2011; UNAIDS, UNIFEM and UNFPA, (2004), Women and HIV/AIDS: Confronting the Crisis. Available at: http://www.unfpa.org/hiv/women/ [Accessed on 7 March 2012]; cited in Basu, A. and Menon, R, (2011), Violence Against Women, HIV/AIDS Vulnerability, and the Law. Working Paper prepared for the Third Meeting of Technical Advisory Group of the Global Commission on HIV and the Law, July 2011.

370 Combating of Rape Act 8 2000, s. 3, and Zimbabwe, Criminal Law (Codification and Reform) Act No. 23 2004, s. 68(a).

373 See, for instance the Tanzania case of *Ndossi v. Ndossi* where a widow was granted her right to administer her deceased husband’s estate over her husband’s brother-in-law, and the Ugandan case of *Owagage v Mudhma* where the High Court of Uganda held that a will granting property to the deceased’s wife was valid over holding the property in trust for clansmen, discussed in Ahmed, A., (2011), ‘Property and Inheritance Laws: The Impact on HIV’. Working Paper prepared for the Third Meeting of the Technical Advisory Group of the Global Commission on HIV and the Law, July 2011.

378 Definition of the child (Article 1 of the UN Convention on the Rights of the Child): The Convention defines a ‘child’ as a person below the age of 18, unless the laws of a particular country set the legal age for adulthood younger. The Committee on the Rights of the Child, the monitoring body for the Convention, has encouraged States to review the age of majority if it is set below 18 and to increase the level of protection for all children under 18. Available at: http://www2.ohchr.org/english/law/crc.htm [Accessed 29 December 2011]; Where youth is defined in age based terms actual age ranges vary. For instance, the official UN definition of youth refers to people in the age bracket 15–24 years, while UNESCO defines ‘young people’ to be between 10–19 years old (UNESCO 2004). UNICEF identifies ‘adolescents’ (10–18 years), while the UN Convention on Child Protection considers all people up to the age of 18 as ‘children’. Thus, someone in the 15–18 age range, can be considered a ‘youth’, a ‘child’, but also a ‘young person’. UNICEF, (2012), Towards an AIDS Free Generation.
