In the UNDAF 2012-2015, the United Nations System and the Government of Mozambique, commit to a common strategy to enhance the performance and impact of the joint response to the development needs of Mozambique.
EXECUTIVE SUMMARY

This United Nations Development Assistance Framework (UNDAF) 2012 – 2015 is the expression of the UN’s plan to support the Government of Mozambique in its final stretch towards the MDG timeframe of 2015. It is also the first UNDAF developed under the Delivering as One (DaO) pilot in Mozambique and combines the efforts of the 20 UN agencies active in the country to provide focused, effective and efficient support to the government’s plan, complementing the considerable support of bilateral and other multilateral partners. Mozambique is also among the countries where the Paris Declaration Agenda is most advanced, and this UNDAF represents the UN’s plans to fulfil the critical role required of it within the new aid architecture.

The UNDAF was developed in conjunction with the national plan for 2011-2014 (PARP) whose central objective is to reduce poverty from 54.7% in 2009 to 42% in 2014. From being one of the poorest and most capacity constrained countries in the world in 1992, there have been significant improvements, first as part of the “peace dividend” and then thanks in part to impressive economic growth and sustained substantial development assistance in support of successive government poverty reduction strategies. Based on analysis of the second national household survey data, the Third Poverty Assessment notes that while poverty went down from almost 70% in 1997 to 54% in 2003, it appears not to have reduced since then (GOM 2010, Boom 2011). At the same time, while a number of non-income indicators have shown steady improvement, Mozambique is still ranked among the poorest countries by the Human Development Report, for example, reflecting the persisting long term effects of underdevelopment over 15 years of war. Moreover, there are indications that income inequality may be growing.

Today 70% of the population in Mozambique live in rural areas and most depend of subsistence agriculture (INE 2010). Despite notable efforts to address the issue, extremely low agricultural productivity, combined with high vulnerability to climatic shocks means that a very high number of population is chronically food insecure and income from agricultural products is low and unreliable. Among the highest HIV prevalence in the world, as well high incidences of other diseases, such as malaria, tuberculosis (TB) and water borne diseases, worsen these conditions. Persistent gender inequality means that women and children are disproportionately the victims of poverty, food insecurity, and disease. At the same time since the first multiparty elections in 1994, Mozambique has enjoyed a period of political stability during which democracy has deepened. Nevertheless, the still evolving mechanisms of access to political institutions and processes and still scarce habits of democratic participation have meant that public voice and the accountability of public institutions still need considerable strengthening.

Guided by human rights instruments, the MDG and IADG, the UNDAF 2012-2015 strives for “Reduced poverty and disparities to improve the lives of the most vulnerable people in Mozambique by 2015” as its overall goal in support of national priorities outlined the Government’s Five Year Plan, the PARP 2011-2014 and national sector policies. This overarching goal is informed by three guiding principles that ensure that UN interventions in support of the government: i) adopt culturally responsive, gender sensitive and human rights based approaches focusing particularly on women and children; ii) interweave HIV and AIDS issues throughout all UNDAF result areas; and iii) are substantiated by the promotion of evidence based policies and strategies for equitable and sustainable development.
The UNDAF results are organized around three focus areas. The Economic area aims at tackling the economic disparities through a concentration on the rural poor, especially women and youth, improving their productive capacities, improving income and livelihoods, and reducing vulnerability to natural disasters. The Social area aims at reducing inequality of access to services for vulnerable groups, especially women and children. Taking a human rights based approach, the UN’s activities focus on improving the capacity of duty bearers to provide services, and on empowering rights holders in the form of vulnerable people to access and use social services for improved health, education, water and sanitation and social protection. Within these broad outcomes the UN’s strategy will be, on the one hand, capacity building of public institutions, with an emphasis on the decentralized level, and support to the development of national policies and strategies to improve the quality of services that have an impact on vulnerable groups, especially women and children; and on the other hand on changing behavior through community mobilization and awareness raising leading to safer behavior and better use of services. Within governance, in the PARP a supporting area for its three main pillars, the UN will concentrate, first, on deepening democracy and increasing voice and public accountability through, on the one hand, strengthening the democratic and justice institutions of government and, on the other strengthening the capacity of vulnerable populations through civil society organizations and the private sector to participate effectively and demand their rights. Second, the UN will focus on improving governance at the local level, both strengthening government local institutions and ensuring better engagement and participation by local populations in their own development.

The outcomes in this UNDAF are intentionally at a high level, to enable a better alignment between the UN’s combined support and the government’s higher level goals. To ensure proper accountability for results the outputs and activities for which the UN is responsible will be detailed in the UNDAF action plan. Moreover, this UNDAF represents exclusively the entirety of the UN’s activities in Mozambique, including those for humanitarian assistance, and is therefore the UN’s One Programme for Mozambique. The UNDAF Action Plan will represent the exclusive joint action plan for all UN agencies, replacing Country Programme Assistance Plans (CPAPs) for example. Annual workplans will largely be joint, and organized around the UNDAF action plan, while monitoring and evaluation will be fully harmonized internally among agencies and aligned with national systems. The funding framework will be underpinned by a pooled fund (One Fund) along with agency specific resources.

In the context of the Paris Declaration and the Accra Agenda for Action among others, and which the Delivering as One agenda complements, the UN in Mozambique is expected to play a more active role and up-stream policy and technical support for government strategy development and planning and aid coordination. Improved coherence among UN agencies to ensure that the UN’s technical depth is brought to bear as broadly and efficiently as possible is at the center of the Delivering as One (DaO)-approach. Complementing this, the UN will continue providing focused programme support in key areas and models for future scaling up.
1. INTRODUCTION

Covering the timeframe until the target date for the achievement of the Millennium Development Goals (MDG), the present United Nations Development Assistance Framework (UNDAF) 2012-2015, which is the expression of the joint commitment of the United Nations System in support of the development efforts of the Government in Mozambique, accompanies a very critical period in the development process of the country. It is based on the Government’s Five Year plan (Plano Quinquenal do Governo, PQG) 2010-2014, and was developed in parallel with the Poverty Reduction Strategy 2011-2014 (PARP) which operationalizes the PQG.

1.1. The Mozambican context

Mozambique – with a population of 21.4 million people, out of which 43% are under the age of 15 (INE 2010), and an estimated gross domestic product (GDP) of 10.5 billion US$ for 2011 (IMF 2011) – emerged from civil war almost twenty years ago as one of the most impoverished and capacity constrained countries in the world. Since then, its overall economic growth has been impressive with an annual growth rate of the GDP of over 6.5% in each of the last five years, and the government has demonstrated strong commitment to address the needs of its population and achieve the Millennium Development Goals (MDG).

Nevertheless, Mozambique, in part because of the extremely low base from which it departed, continues to face serious challenges. Notwithstanding the Government efforts, growth has been inequitable and has not yet translated sufficiently into social development. According to the 2010 Human Development Report, Mozambique ranked 165th out of 169 countries in 2010 (UNDP 2010) and the country remains one of the poorest in the world. Regardless of the high level of economic growth, progress towards achieving the MDGs and internationally agreed Development Goals (IADG) has been mixed. While the Third National Poverty Assessment published in September 2010 confirms important improvements in access to education and health services, consumption poverty still remains widespread in Mozambique. According to the report, the national poverty rate of 54.7% has not changed significantly since 2002/03 (54.1%) though there have been some variations at the provincial level. The report also confirms that households headed by women are generally poorer than those headed by men.

Rural populations remain particularly vulnerable. About 70% live in the rural areas, the majority of whom depend on subsistence farming. The low productivity of the agriculture sector combined with poor access to quality basic social services despite the observed progress, leads to persistently high levels of child malnutrition and food insecurity in rural areas. Significant movement in both directions across the poverty line has been observed, further suggesting high levels of vulnerability. Moreover, specific groups, such as women, children, refugees, old and chronically ill people, remain more vulnerable than others.

Underlying challenges contributing to the high poverty rates and representing central constraints to achieving the MDGs and IADGs are related to limited financial and human resource capacities across national institutions, limited use of data for evidence-based policy making and persistent deep gender-based inequalities. In addition, the HIV epidemic threatens to undermine all development results achieved over the past decades given a national HIV prevalence for adults (15-49) of 11.5% with
significant geographical variation and differences between urban and rural areas (urban population being significantly more infected). Also rapid urbanization combining high population density, poor infrastructure and fragile livelihoods as well as increasing cross-border migration present a growing challenge to development. Finally, Mozambique’s vulnerability to natural disasters implies that development progress remains fragile and subject to possible setbacks.

Despite these challenges, Mozambique is endowed with rich natural resources, including large quantities of fertile land, out of which only about 5% are presently used for productive purposes, and a 2,470 km long coastline offering opportunities for mineral resource extraction, fisheries, tourism and trade. Also the country’s three strategic ports and vital transport corridors serving its neighbouring landlocked countries offer many opportunities for pro-poor economic growth.

In light of this situation, the PARP 2011-2014 aims at pursuing inclusive economic growth and the reduction of poverty and vulnerability in Mozambique by focusing on the three pillars of increased production and productivity in the primary sector, employment creation, and human and social development. Good governance and sound public financial management are the two indispensable supporting pillars.

1.2. The UN support to the national development process

The Government of Mozambique (GoM) has been receiving substantial support from bilateral and multilateral partners in its development efforts. Notably, it is the largest recipient in the world of direct budget support and is among the most advanced countries in terms of the Paris Declaration Agenda. Mozambique is also one of eight Delivering-as-one UN pilot countries. These innovations are linked and have led the UNCT to carefully reconsider its role and comparative advantage in the new aid architecture.

Given its long established presence in Mozambique and its international network, the United Nations’ comparative advantage lies in its knowledge of the development context and in its ability to enhance technical capacities of Government structures and civil society organizations for scaled-up service delivery. The multi-mandate make-up of the UN agencies enables them to provide multi-disciplinary support and facilitate a more integrated multi-sectoral approach on the part of Government both for mid-term development efforts and emergency operations. HIV and AIDS, gender, food security or disaster risk reduction are examples which require multi-sectoral approaches and where the UN can bring the specialized skills of all agencies to bear. The United Nations in Mozambique are also recognized for their ability to provide normative support and policy advice both at up-stream and decentralized levels based on impartiality and universality, to facilitate partnerships between government institutions, civil society and the private sector, as well as for their normative and standard-setting role.

The present UNDAF 2012-2015 is the result of a strong and continuous partnership between the Government of Mozambique and the United Nations. The UN Development Issues Paper and the UN Position Paper represented the starting point for a highly participatory planning process, which was based on the PARPA reviews conducted in 2009, the midterm review and final evaluation of the previous UNDAF, as well as the country-led Delivering as One (DaO)-evaluation in 2010. Each stage of the planning process, such as the joint Government–UN prioritization workshop of the UNDAF outcomes
held in June 2010, was accompanied by strategic Government meetings at senior level, and extensive consultations with civil society and the international development partners. Joint training courses with government officials on the programming principles of the UNDAF ensured that the core values of the UN were understood by all relevant stakeholders. The fact that the present UNDAF was developed at the same time as the PARP and with active involvement of UN staff members in both processes has also facilitated increased alignment of the UN with national planning cycles and systems.¹

Accordingly, the UNDAF 2012-2015 will contribute to the achievement of the national priorities as outlined in the Government’s Five Year Plan, the PARP 2011-2014 and national sector policies based on the UN’s comparative advantage in Mozambique. Guided by human rights instruments, the MDG and IADG, it strives for increased social and economic equity by reaching the most disadvantaged areas and vulnerable groups and will support full engagement of the people and public institutions in the development process as precondition for sustainable poverty reduction. Reflecting the government’s strategic approach and the UN’s expertise, the UN’s policy advice and advocacy will be complemented, wherever possible and appropriate, by capacity development and technical support activities at the decentralized level. In response to the diversity of the development challenges and the underlying inequalities and understanding the significance of HIV and AIDS as a key development challenge in Mozambique, all programme interventions are guided by the following three principles:

- Systematic implementation of a culturally sensitive and gender responsive, human rights based approach ensuring a focus on the most vulnerable groups, particularly women and children
- Response to HIV and AIDS issues throughout all UNDAF result areas
- Promotion of evidence-based policies and strategies for equitable and sustainable development across all sectors

2. UNDAF RESULTS

Under the global umbrella statement “Reduced poverty and disparities to improve the lives of the most vulnerable people in Mozambique by 2015” the United Nations including ten resident and ten non-resident UN agencies will seek to achieve eight strategic results in collaboration with Government institutions, civil society and other development partners in the economic, social and governance areas.

2.1. Economic Area

The slowing progress on poverty reduction over time has been attributed in the PARP to three main factors: the low productivity growth in the primary sector, the vulnerability of the agricultural sector to climatic shocks and the social impact of high food and fuel prices. As public funding or incentives to target increase of production and employment are still very limited, food and livelihoods insecurity, which are the extreme manifestation of vulnerability, continue affecting the improvement of other dimensions of human development.

The agricultural sector represents the main source of livelihood for the populations that live in the rural areas of Mozambique (70%). It is estimated to sustain about 80% of the economically active population

¹ It has to be noted though that the final structure of the PARP is not yet known given that it is still in its finalization process.
and 87% of the female labor force in the country, but only represents 29% of the GDP (IFAD 2010, INE 2006), as it remains largely based on subsistence agriculture with low yields and high post-harvest losses. Also the insufficient access to quality agricultural inputs, the inadequate coverage of extension and other support services as well as weak value chains development for farming products, including livestock, contribute to the low productivity and high transaction costs in the sector. However, it has to be noted that

While subsistence farming predominates in rural areas, the Micro, Small and Medium Enterprises (MSME) generate the largest number of jobs in the urban private sector. However, the small formal economy is largely unable to absorb the estimated 300,000 young people who enter the labor market each year. As a consequence, the majority look for alternatives in the informal economy, where they often end up in low productivity jobs with marginal returns. The main challenges for sustainable employment creation both in rural and peri-urban areas, besides insufficient enabling policies and regulations, are high illiteracy levels, scarce vocational and technical training opportunities, limited access to micro-credits and other financial services for vulnerable groups, the insufficient availability of quality business information as well as weak management structures of many MSMEs. As women and youth are more often excluded from sustainable employment opportunities, specific considerations to women empowerment and youth development are vital for tangible poverty reduction.

Furthermore, agricultural production is highly susceptible to the impacts of climate change and natural disasters. As repeated droughts, floods and tropical cyclones are further eroding already precarious livelihoods, food and nutrition insecurity are recurrent.

In view of facilitating rapid, sustainable and inclusive socio-economic growth and food security, increasing productivity in agriculture and fisheries, combined with sustainable employment creation is at the center of the PARP 2011-2014, and Disaster Risk Management one of the key cross-cutting elements. Accordingly, the United Nations will complement their efforts in supporting productivity growth in the primary sector, which will have direct impact on rural livelihoods, with interventions that will enable MSMEs to generate sustainable employment opportunities. Given that recurrent natural hazards may compromise successful undertakings within these two result areas, disaster management and climate change adaptation measures are indispensable for the development of a sustainable economy in the country.

Under outcome 1, the United Nations will support the Ministry of Agriculture, the Ministry of Fisheries and the Ministry of Industry and Trade to ensure that “Vulnerable groups (with a particular focus on women) demand and ensure production and productivity in the primary sector in order to increase their own food security”. Special attention will be given to subsistence farmers, who represent the poorest and most vulnerable segment of the population. The complementarities between the UN agencies will allow interventions at all points along the value chain. In order to establish the link between agricultural production and food security, gender inequalities will be systematically targeted. Specifically, the UN will:

- Contribute to the creation of an institutional, policy and implementation framework that is conducive to the development of the agriculture and fishery sectors and support the
transformation of subsistence agriculture into a competitive, sustainable and market-oriented venture

- Support small subsistence farmers in the adoption of improved techniques and organizational skills for increased productivity (agriculture and livestock) and reduced post-harvest losses in order to increase the sustainable availability of food
- Support fishery communities to adopt improved and more productive techniques concerning handling, storage and conservation of fishery products
- Facilitate land use rights through the issuance of land certificates taking into consideration traditional systems and practices that limit access of women to land.

The UN’s active involvement in the existing food security working groups, the PROAGRI donor group or the CAADP group will facilitate continuous collaboration with key stakeholders and supply-side partners and contribute to the overall achievements of the results.

The United Nations aims to support ensuring that “Vulnerable groups access new opportunities for improved income and livelihoods, with a special focus on decent employment” (Outcome 2) by helping increase economic opportunities for micro, small and medium enterprises (MSMEs) in rural and peri-urban areas, improve technical and vocational skills of the disadvantaged and facilitate the country’s integration into the international trading system. Priority will be given to sectors with high potential for productive employment generation and livelihood support for women and youth, such as agricultural processing, manufacturing, fisheries, tourism, and the creative industry. In support of a broad range of national Ministries, specialized institutions and business associations, the United Nations will:

- Promote market access for small holder farmers and introduce Mozambique to international markets through the development and expansion of sustainable (internal and external) trade links
- Improve access of MSME to financial services through the promotion of inclusive finance and the development of innovative micro-finance products
- Strengthen business management processes of selected MSME introducing basic systems for business development as well as financial and human resource management
- Facilitate management of critical business and market intelligence through data collection and analysis related to investment opportunities, demand and supply and priority products
- Support the development of more demand-oriented vocational training opportunities which facilitate increased integration of graduates, particularly women and youth, into the labor market
- Support policy development, design and implementation of productive social action programmes (public works).

In light of the challenging effects of natural disasters in Mozambique which are becoming more frequent and damaging, the UN has been emphasizing the need to evolve progressively from reactive emergency response towards a planning based risk reduction approach fostering disaster prevention, risk mitigation and progressive adaptation to climate change. Consequently, the United Nations will help the Ministry of Environment, the Ministry of Agriculture and the National Institute for Disaster Management ensure that “Sustainable and effective management of natural resources and disaster risk reduction benefit all people in Mozambique, particularly the most vulnerable” (Outcome 3). In particular, the UN will:
Strengthen the policy and legal framework for disaster risk reduction including the Government’s master plan for disaster mitigation, and promote mainstreaming of environmental sustainability and adaptation to climate change into national planning processes at all levels with due consideration of the cultural and gender dimension.

Enhance national early warning and monitoring systems for disaster management in view of facilitating informed decision-taking by all relevant national stakeholders.

Support the expansion of integrated community mechanisms for national disaster resilience and sustainable natural resource management in disaster-prone provinces.

Provide rapid humanitarian relief and early recovery support for communities affected by natural disasters in close coordination with national stakeholders.

In order to facilitate complementarities of the interventions with other stakeholders, the United Nations will participate actively in the Conselho Técnico de Gestão de Calamidades as well as the DRR and Environment Working groups under the PARP. The coordination of the humanitarian aid will be done continuously through the Humanitarian Country Team and the Cluster Approach.

2.2. Social Area

Despite the notable progress in terms of access to basic social services over the past years, the latest National Poverty Assessment also shows that inequalities persist both in terms of geographical areas, vulnerable groups and sex and that the quality of social services often remains low. Underlying causes are on the one capacity constraints of public institutions in the social sector, particularly at the decentralized levels, on the other hand the persisting need to promote safe and healthy behavior at the community level. As the socio-economic barriers are putting at risk the achievement of the MDGs, the PARP 2011-2014 highlights the importance of human capital for sustained poverty reduction and stresses particularly the areas of Education, Health and Nutrition, Water and Sanitation, HIV and AIDS, Social Protection and Housing.

Mozambique has an epidemiological profile of a country with a high population growth rate of 2.7 and low life expectancy of only 51.7 years (INE 2009, 2010). The most common immediate causes of death and illness in Mozambique are malaria, tuberculosis, AIDS, acute respiratory tract infections and diarrhea related diseases, often with undernutrition as a compounding factor. While Mozambique is on track to meet the MDG target on reducing the percentage of underweight children (low weight for age), stunting (low height for age) levels are alarmingly high at 46% (Third Poverty Assessment). One important contributory factor to the high level of food and waterborne diseases is the inadequate access to clean water supply, sanitation facilities and hygiene. Despite improvements in the institutional and policy framework over the past years, the coverage of water and sanitation facilities still remains low, particularly in rural areas of the northern and central provinces, with only 43% of the Mozambican population having access to safe water and 19% to sanitation.

The national HIV epidemic represents another important threat to development in Mozambique. In 2009, 22% of the total deaths in the country were due to AIDS, and AIDS is the second cause of deaths in children under 5 after malaria and one of the leading indirect causes of maternal mortality. Mozambique has also the third highest estimated mortality rate among TB-HIV patients among 22 TB high burden countries. With a prevalence rate of 13.1% among women against 9.2% among men, HIV
disproportionately affects women and girls. While the upwards trend of HIV infections has slowed down in the past year, continued and intensified prevention, care, treatment and mitigation activities are still required at a large scale for a sustainable reversal of the trend.

Despite an increased net primary school attendance rate of 81% (MICS 2008), long-standing discrepancies in children’s school attainment persist in both urban and rural areas because the increased number of school population is yet to be matched by improved quality of education. Furthermore, overall literacy in Mozambique remains low at 52% (Mozambique MDGR 2010) despite some progress in recent years. Other visible effects of discrimination and marginalization of women and girls that permeate society are the high levels of teenage pregnancies (41%, MICS 2008) leading to girls dropping out of school and high prevalence of violence against women, especially in rural areas (more than half of Mozambican women have experienced some kind of violence in their life). This added to high maternal mortality rates, which are estimated in the Census 2007 at 500 deaths per 100,000 live births, the majority of deaths due to preventable and treatable conditions.

Social protection measures can play a key role in ensuring poverty reduction and food security, reducing vulnerabilities and contributing to social development, particularly for those individuals who cannot be covered through conventional sector approaches. In order to reach more beneficiaries effectively there is need to expand fiscal space, improve the design and implementation of programmes and expand and scale up existing and new programmes to be more inclusive regarding the most vulnerable groups and those individuals that are not registered as Mozambican nationals.

The social sectors are where the UN commits the highest proportion of its funding organizing its activities around two outcomes. The first outcomes aims at improving the capacity of duty bearers to provide services, and the second on strengthening the capacity of right holders to demand, access and use social services. Within the first outcome, “Equitable provision of quality and essential social services ensure improved well being for all vulnerable groups” (Outcome 4), the main focus will be on enhancing capacities of public institutions for the provision of equitable access to quality education, health and nutrition services, access to safe drinking water, sanitation and housing, social protection, and improved services for people living with HIV. This will be complemented at the upstream level with advocacy through increased partnerships and engagement in sector programmes for the development, execution and systematic monitoring of policies, plans and budgets with a human rights, gender and equity perspective. Specifically, they will:

- Enable public authorities and service providers at decentralized levels to deliver quality water supply and sanitation services in rural areas and improve informal settlements in peri-urban areas while supporting, in parallel, policy reform and participatory and accountable implementation mechanisms at the upstream level
- Strengthen national policies and standards on early learning, school quality and learner assessment, ensuring that relevant national strategies and evaluation mechanisms for pre- and in-service teacher education and for literacy facilitators are in place, complemented by the promotion of a multi-sectoral and holistic approach to education and early childhood development
- Improve the efficiency and effectiveness of social protection programs as an essential tool to promote inclusive economic growth

---

Mozambique Draft UNDAF 2012-2015 for Comments (Gvt/QSA/DP/CS)
Distribution: 6th April 2011
Increase return on investment of social protection programmes through improved management and finance systems and enhanced linkages between the social protection programs, HIV impact mitigation and Disaster Risk Reduction

Enhance essential components of the national health systems, such as human resources, finance, procurement of medical products and technologies and information management

Increase the coverage of specific intervention packages for the prevention and treatment of malaria, tuberculosis, HIV and AIDS, neonatal and childhood diseases, emerging and neglected illnesses, as well as non communicable diseases

Increase availability of quality, integrated and gender sensitive sexual and reproductive health services

Enable the delivery of coordinated nutrition and food security services for the most vulnerable children and their families, such as people living with and affected by HIV and AIDS, in view of reducing chronic malnutrition

Improve the provision and quality of integrated services for the prevention of HIV infection in newborns, youth and adults, as well as the treatment and care of people living with HIV and Tuberculosis.

In view of achieving the second outcome in the social area, “Vulnerable groups demand, access and use quality and equitably delivered social services” (Outcome 5), the UN will complement its interventions at policy and national level with significant community mobilization and awareness raising activities at decentralized levels using a cultural, gender and human-rights based approach to programming. By empowering vulnerable groups through strategic long-term capacity building initiatives and bringing the voice of right holders to the attention – and action – of duty bearers, the UN System will:

- Facilitate the creation of an enabling environment at the municipal, district and provincial levels to ensure private and public sector involvement and enhanced community participation for the sustainable management of water and sanitation facilities
- Contribute to reducing the risk of HIV infections and other sexual transmitted diseases, particularly among girls and women, by promoting positive cultural practices and change, and enabling environments for the adoption of safe and supportive behaviors
- Increase knowledge and awareness of populations about the most important health, food security and nutrition risks recognizing the responsibility of the end users through promotion of healthy lifestyles and the prerequisite of their engagement in the social development process
- Reduce key barriers to the utilization of health and nutrition services for vulnerable groups in rural areas
- Support integrated literacy and life-skill programmes for vulnerable youth and women
- Provide complementary and integrated assistance to vulnerable groups who are not covered by the basic social protection programmes.

In order to maximize the development results and ensure complementarities with other partners and donors in the social sector, the UN will maximize the use of existing coordination mechanisms, such as the National AIDS Coordinating Authority (CNCS), the Programme Aid Partners (PAPs) group and various
SWAp mechanisms including ProSAUDE (health and nutrition), FASE (education), and PRONASAR (water and sanitation).

### 2.3. Governance Area

The PARP 2011-2014 considers governance – specifically, a good business environment, a quality legal framework, decentralization and deconcentration of key functions and resources to the local level, as well as democratic systems and the respect of rule of law – as “supporting pillar” or pre-condition for the achievement of the three general PARP objectives aiming at reducing poverty and vulnerability in Mozambique. The UNDAF is taking a rights-based approach to development to development. Following the rights-based approach taken by this UNDAF, the governance pillar focuses particularly on the systems and processes that enable people to realize their rights both at national and decentralized levels.

Members of Parliament (MPs) recognize that the Parliament’s oversight functions and its capacities to formulate laws in consultation with the public still need to be further strengthened despite considerable progress in recent years. Mozambique has successfully conducted several national and municipal elections, but electoral laws are currently being improved and the habits of democratic participation need further deepening through civic education. Ensuring equitable access to justice including strengthening judicial institutions and addressing structural challenges in the formal and customary administration of justice is another critical area.

Effective policy formulation, monitoring and programming could be enhanced by the use of quality data, systematic mainstreaming of crosscutting issues and stronger institutional planning and budgeting capacities both at national and decentralized levels. Also the quality of private sector and civil society participation can be improved in the national and decentralized planning and budgeting processes: While established participatory mechanisms, such as the Development Observatories and Consultative Councils, already exist, traditional and religious representation need to ensure due acknowledgment of the rich country’s cultural diversity. It is critical that strategies and plans at all levels fully reflect key development issues related to the needs of vulnerable groups and take into consideration the ratification, enactment and enforcement of international and regional legal and regulatory instruments.

As the newly developed decentralization strategy is yet to be approved, efficient and equitable access to public services, particularly at decentralized levels, is considered another national priority. This includes, among others, integrated public services, judicial services, civil registration, the establishment of a National Human Rights Commission that is also operational at decentralized levels, and integrated care for victims of violence and abuse. While the service provision needs to be strengthened, it is critical that vulnerable groups are aware of their human rights in order to be able to increase knowledge and participate effectively in planning, budgeting and monitoring processes.

Under “**Strengthened democratic governance systems and processes guarantee equity, rule of law and respect of human rights at all levels**” (Outcome 6), the UN will collaborate with national State and non-State actors towards a strong and efficient functioning of the national representation system and transparency of decision-making processes. Specifically, the United Nations System will:
➢ Strengthen electoral management systems and civic education with a special focus on women
➢ Foster the Parliamentary effective oversight function on public finance and its capacity to initiate, recommend and review legislation and facilitate its enactment
➢ Provide institutional capacity enhancement of key national stakeholders in relation to national planning, budgeting and monitoring processes with particular attention to cross-cutting issues
➢ Support the collection, analysis and strategic utilization of disaggregated data, particularly by age, sex, and provinces, for evidence-based policy development with a focus on equity for and inclusion of vulnerable groups
➢ Strengthen the judicial framework and facilitate integrated access to justice and the protection sector, particularly for women, including police training on sexual- and gender-based violence
➢ Advocate for the ratification and domestication of key international and regional human rights instruments, as well as for the withdrawal of existing reservations
➢ Support the establishment of the National Human Rights Commission
➢ Strengthen national systems to design, finance, implement and monitor an effective HIV response covering critical areas such as HIV and human rights, HIV and gender, and stigma and discrimination.

For the achievement of outcome 7 “People in Mozambique participate in shaping and monitoring a transparent and equitable national development agenda”, the United Nations will facilitate increased participation of civil society and the private sector in development processes and:

➢ Raise awareness and mobilize support for human rights of vulnerable populations, including women’s rights and rights of people living with HIV and AIDS, and strengthen the role that civil society can play in the development process
➢ Develop capacities of both civil society and private sector representatives for effective participation in defining and monitoring the development agenda at all levels
➢ Support the implementation of knowledge management strategies with a distinct focus on equitable access to and meaningful use of information for development at decentralized and socially inclusive levels

The UN Civil Society Advisory Board will be one of the main forums for coordinating the interventions with civil society in addition to more specialized fora, such as e.g. the Civil Society Forum for Child/Human Right or the Forum for Community Radios (FORCOM).

The Outcome 8 “Government and civil society provide coordinated, equitable and integrated services at decentralized level” is focused on strengthening local governance by supporting the decentralization process as an integral part of the overall Mozambique Governance and Public Sector Reform Programme. Specifically, the UN system will:

➢ Strengthen provincial, district and municipal capacities to integrate crosscutting issues into economic and social planning cycles
➢ Improve the information systems that provide disaggregated data, including age, sex and geographic areas, for planning, monitoring, evaluation, and decision-making at provincial and district levels
- Support selected districts in offering integrated police, protection and justice services for victims of violence and abuse
- Strengthen the civil registration system both at national and decentralized level for increased access to citizenship for the full enjoyment of basic human rights and prevention of statelessness
- Strengthen the government capacities to implement the decentralization policy and improve systems and strategies to enable the implementation

3. ESTIMATED RESOURCE REQUIREMENTS

The total contribution of the United Nations System, including resident and non-resident agencies, to the implementation of the UNDAF 2012-2015 in Mozambique has been estimated at around US$ 736 million. Approximately 55% (US$ 405 million) of the total contribution are scheduled for the social area, 32% (US$ 235 million) for the economic area and, 13% (US$ 97 million) for the governance area. These estimates include both regular agency resources and other resources that UN agencies intend to mobilize jointly or individually from external sources. The Resident Coordinator will support the resource mobilization efforts of the UN agencies through the formulation of a joint resource mobilization strategy and the One Fund.

The following table provides an overview over the indicative resource allocation per UNDAF outcome. Detailed fund allocations per UN agency are included in the attached outcome results matrix and will be further specified and updated annually within the Common Budgetary Framework of the UNDAF Action Plan.

Summary table on the financial resource allocation of the United Nations System per UNDAF Outcome:

</tr>
</tbody>
</table>
4. IMPLEMENTATION

The UNDAF 2012-2015 will be operationalized through a joint UNDAF Action Plan under the overall coordination of the UNDAF Steering Committee comprising at the highest level the Ministry of Foreign Affairs (MINEC), the Ministry of Planning and Development (MPD), the Ministry of Finance (MF) and relevant Line Ministries, three representatives of the Civil Society Advisory Board, selected donors and Heads of UN Agencies. This committee, co-chaired by the Minister of Foreign Affairs and the United Nations Resident Coordinator, will be the highest decision-making body for the implementation and monitoring of the UN programme and will provide strategic orientations for the achievement of the expected results.

The UNCT under the leadership of the UN Resident Coordinator will be responsible for the efficiency of the UN interventions and will direct the planning, implementation and monitoring processes in line with the recommendations and decisions of the UNDAF Steering Committee. They will oversee the UNDAF implementation on a regular basis, discuss and determine the delivery approach, including the number and type of joint programmes, and identify possibilities of joint resource mobilization for the entire UN programme.

While the actual implementation of UN programming activities will be done by state and non-state actors with support from the respective UN agencies, interagency Development Result Groups (DRG) will serve as the operational mechanism for the sectoral coordination, management and monitoring of UN interventions around UNDAF outputs and outcomes and mainstreaming of HIV/AIDS and gender across the entire UNDAF. Each DRG will be chaired by a Head of Agency who will ensure adequate Government participation and report back to the UNCT on a regular basis.

The M&E experts in the DRGs will facilitate effective data collection and monitoring of progress towards the achievement of UNDAF results. The collectivity of the M&E focal points will constitute the M&E Group under the leadership of the Resident Coordinator’s Office. In the context of the UNDAF, group will be in charge of (i) formulating and managing the UNDAF M&E-Plan, (ii) developing joint M&E-tools, (iii) managing and updating the UNDAF M&E-database (DevInfo), and (iv) consolidating the annual UNDAF report based on the contributions from the different DRGs.

The UNDAF structures will be aligned with Government-led coordination mechanisms, as soon as the aid architecture around the PARP will be defined.

Complementary to the coordination of the development initiatives of the UN, the humanitarian assistance is coordinated by the Humanitarian Country Team (HCT) at the oversight level, and through the cluster approach at sectoral level supported by the cross-sectoral Humanitarian Working Group.

The details of the coordination mechanism, agency roles and responsibilities and alignment with national coordination structures under the PARP will be further detailed in the UNDAF Action Plan and the UN management plan that will further deepen the DaO-approach in Mozambique.
5. MONITORING AND EVALUATION

The monitoring process

Progress towards the achievement of UNDAF results will be monitored both at outcome and output level based on the indicators defined in the results matrices and in line with the M&E Plan that will be developed. For the outcome indicators, which are fully aligned with national indicators in the PARP or sector-specific plans, the data will be drawn from national sources. Given that these data serve in the first place to measure national results, the specific UN contribution will be only monitored at output level, for which the indicators will be defined in the UNDAF Action Plan.

The Annual UNDAF Review under the leadership of the UNDAF Steering Committee will serve as the main mechanism for monitoring and analyzing progress towards the achievement of UNDAF results and taking stock of lessons learnt and good practices.

Each DRG will be in charge of the data collection for reporting against the established indicators of the UNDAF outputs and the financial delivery rate under its respective area. As necessary, these could be preceded by agency-specific reviews that would be kept as light as possible to minimize agency specific processes and burdens on government. The indicator status will be complemented by an analytical narrative about progress against the expected outcomes in light of the financial disbursement status and integration of cross-cutting themes, such as HIV and AIDS, culture, gender and human rights, into programming activities.

Based on the contributions from the DRGs, the M&E group will update the UN database (DevInfo), classify the progress status on annual targets of UNDAF results (e.g. met, delayed, etc.) and prepare one integrated annual UNDAF monitoring report, which will represent the most important background document for the annual review meeting. The subsequent decisions and recommendations of the UNDAF Steering Committee will then feed back into the next annual planning process.

In 2013, the United Nations will prepare a more extensive UNDAF progress report which will highlight the contributions of the UN to the national results, as defined in the PARP and the Plano Quinquenal and covers the entire UNDAF period starting from 2012. The monitoring of the UNDAF will be aligned to the extent possible to national systems.
External UNDAF Evaluation

An external evaluation covering the entire programming cycle will be conducted in the penultimate year of the UNDAF implementation (2014) in close collaboration with national stakeholders. The evaluation aims to assess the relevance, efficiency, effectiveness, impact and sustainability of the UN system’s contributions to the national priorities. Together with the UNDAF progress report, the findings from the evaluation will guide the UNCT’s strategic planning exercise of the subsequent UNDAF. The interagency M&E-group will be in charge of the technical preparation and follow-up on the external evaluation.
### ANEX A: UNDAF Results Matrices

**UNDAF RESULTS MATRIX – LEVEL OF STRATEGIC RESULTS**

**Economic Area**

**National Development Priorities and Targets:**
- Improve/increase access to inputs for productions
- Improve access to markets
- Stimulate employment creation and improve the employability of citizens
- Improve sustainable management of natural resources
- Improve adaptation to climate change

### UNDAF RESULTS MATRIX – LEVEL OF STRATEGIC RESULTS

#### Social Area

**National Development Priorities and Targets:**
- Improve the quality of services and reduce inequities
- Integrate the interventions for the most vulnerable and link them with job creation
- Improve social infrastructure/services with a view to boosting socio-economic development and create a productive and enabling environment
