NEWSLETTER N2
The significance of this day for you?

Recently, on 15 October, the World Public Toilet Day is observed to raise awareness about the importance of safe and accessible sanitation facilities. In many countries, especially in rural areas, access to clean and sanitary facilities is a major challenge. The World Toilet Day aims to change this, making a case for universal access to sanitation. It is a call to action for governments, organizations, and individuals to work towards a world where everyone has access to a toilet.

Women and girls are particularly affected by the lack of sanitation facilities. In many parts of the world, girls miss school due to the lack of facilities, and women face the risk of violence and harassment when they have to go to the toilet. The World Toilet Day highlights these issues and calls for action to ensure that everyone has access to these basic human rights.

The significance of this day is immense as it serves as a reminder of the ongoing struggle for basic human rights and the need for continued advocacy and action. It is a day to celebrate the progress made and to recommit to achieving a world where everyone has access to clean and safe sanitation facilities.
For Rural Women Day

15 OCTOBER - INTERNATIONAL DAY FOR RURAL WOMEN

The International Women's Day is a global event to celebrate the social, economic, cultural, and political achievements of women and to call for gender equality and women's rights. In rural areas, women often face additional challenges that limit their access to education, healthcare, and economic opportunities. Here are some key reasons why celebrating International Women's Day is crucial for rural women:

1. **Economic Empowerment**: Rural women are often involved in agricultural activities. However, they often face gender biases in accessing credit, training, and technology. International Women's Day can highlight the need for inclusive policies that provide equal opportunities for rural women to participate in the economy.

2. **Educational Opportunities**: Access to education is crucial for personal and professional growth. Rural women often struggle with limited access to educational facilities. International Women's Day can be a platform to advocate for policies that ensure rural women have equal access to education.

3. **Healthcare Access**: Rural areas often have limited healthcare facilities. Women's health issues like maternal mortality, reproductive health, and nutrition are critical but often neglected. International Women's Day can be used to bring attention to the healthcare needs of rural women.

4. **Political Representation**: Political empowerment of rural women is essential for sustainable development. Women's representation in decision-making processes at the local and national levels can significantly impact policy making. International Women's Day can be a moment to celebrate progress and call for continued efforts to increase women's political participation.

5. **Environmental Sustainability**: Rural women often play a crucial role in maintaining biodiversity and managing natural resources. International Women's Day can be a time to recognize their contributions and advocate for policies that support their role in environmental conservation.

In conclusion, International Women's Day offers a unique opportunity to celebrate the achievements of rural women and to highlight the need for continued efforts to achieve gender equality and women's rights in rural areas. Let's use this day to reaffirm our commitment to empowering rural women and creating a more inclusive and equitable society.

The initiative aims to enhance the capacity of women to promote enterprises and health services, to improve access to safe drinking water and sanitation, and to empower rural women to improve their economic situation.

2. **Innovation:** Families where home is a nutritious shrimp shop, cotton fields, and a nutritious shrimp shop, we look at the impact of food insecurity. Where we can address issues of food security, health, and nutrition, we can improve health and reduce poverty. Our goal is to ensure that everyone has access to healthy, nutritious food. Education and health are essential for long-term development and transformation. Where we can help, we will help. Where we cannot, we will work with others to find solutions.

3. **Innovation:** Women’s opportunities to participate in decision-making and leadership roles are crucial. Women’s participation in decision-making processes can lead to better outcomes for everyone. When women are included in decision-making processes, they are more likely to make decisions that are in the best interest of their families, communities, and countries.

4. **Innovation:** Our future concerns are our present realities. By focusing on education, health, and economic opportunities, we can create a brighter future for everyone. Education, health, and economic opportunities are interconnected and essential for a better future.

5. **Innovation:** Our common concern is our future hope. By working together, we can create a better future for everyone. Our hope is that everyone will have access to education, health, and economic opportunities.

**Photo:** Photo is taken by project.
WATER IS OUR COMMON CONCERN, OUR FUTURE HOPE AND OUR LIFE

Water has always been a precious resource, crucial for life and development. Our planet's water cycle is maintained by natural processes, ensuring a continuous flow of water from oceans to rivers, lakes, and back to the atmosphere. However, human activities and climate change are putting pressure on this delicate balance, leading to water scarcity, pollution, and loss of biodiversity.

Preserving and managing water resources are essential for sustainable development. Governments and international organizations are working together to establish guidelines and policies to ensure equitable access to water for all. Awareness campaigns and education programs help to raise public consciousness about the importance of water conservation and sustainable practices.

In this issue, we explore the challenges and solutions related to water management, focusing on the role of technology, education, and community involvement. We also highlight successful case studies from around the world that demonstrate innovative approaches to water use and conservation.

Let's all work together to ensure a sustainable future for our planet's most precious resource.
N. Sadikova: We just need to gather rural women—water.

abstract: Water resources are used uncontrollably. Are places that water doesn’t reach, while in other places the water doesn’t reach. While in one place we have to preserve it, water is unlimited. We have to preserve it, water is not a problem of water economy. Azerbaijan has no water in the households, problems and difficulties. In this regard, we are looking for solutions. The most urgent problem is the lack of infrastructure. We must organize eco-education for infrastructure. We must educate people for infrastructure. Eco-education: We use water wisely. We need to make simple and logical lessons we can convey the simple principles. In mass media, through workshops, practical sessions, workshops, in every possible way: through dialogue and creative and ready to actively participate address. More sensitive to the problem of water resources and the question, we are becoming more sensitive to the problem of water resources and the question. The family handbooks, a new form of the family, a new form of the family, housewives, a new form of the family, housewives, a new form of the family. This is important. The most cases is when a woman, her role is economic. This is important. When a woman, her role is economic. This is important. When a woman, her role is economic. This is important.
example, drip irrigation, as well as agricultural best practices, improve efficiency on the new technologies for which we need each sustainable water use and conservation. Efforts have been focused on reducing water use and improving the efficiency of irrigation systems. In addition, we need to address the issue of recycling water and increasing the supply of reclaimed water. The goal is to reduce overall water consumption and increase the availability of fresh water resources.

Address Water Issues

What would you propose to do to address this valuable resource?

"Water is our common concern, our future hope and our life."

Women make a significant difference. It is estimated that if 100 million women were to participate in irrigation and agriculture, they could produce enough food to feed a billion people. Women are also critical in maintaining and protecting the environment. They are often the primary caregivers for children and are often responsible for collecting water for domestic use.

What needs to be done?

Women's participation in agriculture and irrigation is vital. By increasing their involvement, we can achieve a sustainable future. Women have the knowledge and understanding of their local cultures and traditions, which can be leveraged to improve water management.

Women's role in irrigation is important. By improving their access to water resources, we can enhance their ability to participate in irrigation and agriculture. This will not only increase food production but also improve the overall quality of life for women and their families.

Women's participation in irrigation and agriculture is critical to achieving a sustainable future. By increasing their involvement, we can ensure that the benefits of water management are shared equally among all communities.
on the issues of drinking water supply, water treatment plant expansion, and infrastructure development. The TWRM plan focuses on the need to improve the economic, social, and environmental well-being of the people. The plan is based on the principles of improving water resources management, gender, and social equity. The project aims to address the needs of women and girls in water resource management and gender issues.

The TWRM Plan for Zarafshan River Basin project focuses on the national law and gender. The need to address the issues of women’s rights, gender equality, and water resources management is highlighted. The project aims to improve the lives of women and girls in the Zarafshan River Basin by providing access to safe and clean water, improving infrastructure, and promoting gender equality. The project also aims to improve the economic and social well-being of the people in the region. The project is being implemented by the Zarafshan River Basin Project, which is supported by the Finnish government. The project aims to address the needs of women and girls in water resource management and gender issues. The project is being implemented in collaboration with local communities and government agencies.
These are the implementations of activities that are expected in society. Among them, women are particularly involved in public administration and gender roles. The government and its programs intend to promote gender equality. One of the most significant contributions is the resolution of the Interdepartmental Committee on Gender. This committee is responsible for reviewing laws related to gender equality, and its recommendations are crucial in improving the status of women in society. Programs are also introduced to improve women's rights and gender equality.

In the context of the basin, the implementation of the Water Supply Strategy involves the coordination of several agencies with a focus on improving water supply and sanitation. This strategy is crucial for ensuring sustainable and equitable access to water and sanitation.

The Water Resource Management Plan (WRMP) for the Zarafshan River Basin Project focuses on the national law and gender. It is designed to ensure that policies and programs are gender-sensitive and equitable. The project aims to improve the infrastructure and provide access to improved water supply and sanitation services to all residents, particularly women and children.

The strategy includes the following key elements:

1. **Infrastructure Development**: Investment in the construction and rehabilitation of water supply and sanitation infrastructure.
2. **Capacity Building**: Training programs for local communities and government officials to improve service delivery.
3. **Equity and Gender Sensitivity**: Ensuring that policies and programs are gender-sensitive and promote equal access to water and sanitation services.
4. **Monitoring and Evaluation**: Regular monitoring and evaluation of project outcomes to ensure that goals are met.

In conclusion, the implementation of the Interdepartmental Committee on Gender Equality and the Water Resource Management Plan for the Zarafshan River Basin Project are crucial for promoting gender equality and improving access to water and sanitation services. The project aims to address the specific needs and challenges faced by women and children in the region, ensuring a more equitable and sustainable future.

France (Spurgeon et al., 2004):

Other characteristics of agricultural policy in France include the reduction of support to farmers, with reduced use of inputs and intensive farming. This is part of the broader trend towards increased agricultural productivity and reduced environmental impact. The policy emphasizes the importance of rural development, with a focus on improving the quality of life in rural areas. The government has been working to attract young people back to the countryside and promote the development of rural tourism and other activities.

Since 2004, the French government has been developing new policies to support rural development and encourage investment in rural areas. These policies include measures to improve infrastructure, support local businesses, and promote agricultural tourism. The government has also been working to improve the education and training opportunities available in rural areas, with a focus on developing skills in fields such as agriculture, tourism, and technology.

The role of women in family farm and rural development of France:

Since 2004, the French government has been working to improve the economic, social, and cultural opportunities available to women in rural areas. The government has been focusing on developing new policies to support women's participation in agricultural and rural development initiatives. These policies include measures to promote women's leadership and participation in decision-making, as well as support for women's business and entrepreneurial activities.

The government has also been working to improve the opportunities available to women in rural areas, with a focus on improving access to education and training, as well as providing support for women's participation in local government and community decision-making. The government has been working to promote women's participation in the decision-making process, with a focus on improving the representation of women in local government and community organizations.
