

FAST FACTS

Crisis Support for Solid Waste, Water Supply and Sewage

Empowered lives.
Resilient nations.

Programme Area
**Democratic
Governance and
Peacebuilding**

Duration
**December 2018–
May 2020**

Budget
US\$8,216,525.00

Donors
Japan

Violence and instability has affected almost all Yemeni governorates, impeding access to basic services such as water, sanitation and waste management. Lacking revenues, state institutions are challenged to pay salaries and running costs, while equipment and infrastructure deteriorates. Disparate water availability, leakage, and irregular collection of waste contribute to the spread of serious diseases, including cholera.

Objective

This project, officially referred to as Crisis Support for Solid Waste, Water Supply and Sewage in Institutions in Aden and Mukalla City, is designed to help responsible institutions to provide essential services in two major cities, as a way to reduce epidemics, improve security and enable the people of Yemen to experience the advantages of peace.

Value

Project outcomes are anticipated to reduce water-related diseases; increase human productivity and strengthen the economy; and contribute to peace and stability.

Activities

Project activities include support to the Cleaning Fund and Public Corporation for Water and Sewerage to provide services in Mukalla; and repair of critical infrastructure, including the main sewage network.
