

A Malaria-Free Vanuatu, Contributing to the Good Health and Well-Being of the Population

2021 RESULTS AT A GLANCE

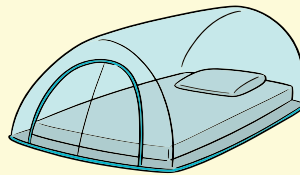

The project supports the Vanuatu Ministry of Health's vision to reduce local transmission of malaria to zero in all provinces and achieve a 'malaria-free Vanuatu' by the end of 2023. It is supported by the Global Fund, with UNDP as the Principal Recipient and the Ministry of Health as the Sub Recipient.

Distributed a total of **37,090** long-lasting insecticide-treated net (LLINs)¹

Malampa: 2,990 Shefa: 21,571
 Penama: 4,120 Torba: 2,497
 Sanma: 5,912

And ensuring **81%** of people slept under a LLIN the previous night

69%

Percentage of health facility reports received against total expected

100%

Suspected malaria cases that receive a parasitological test at public sector health facilities

6%

Annual blood examination rate²

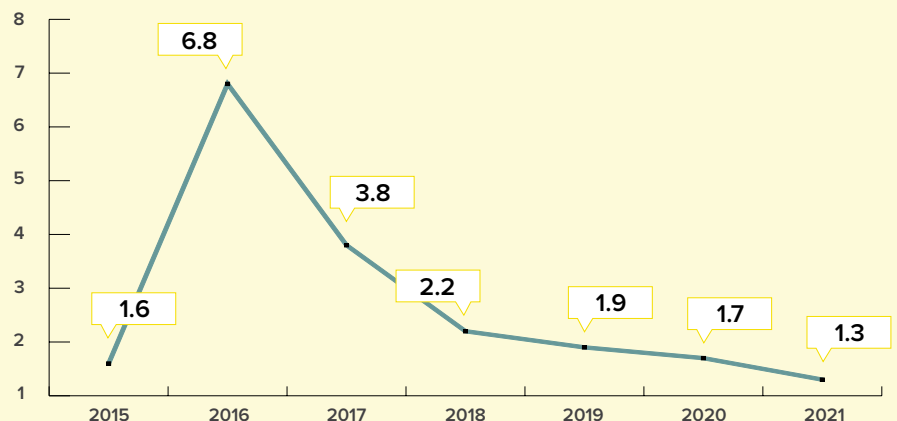

100%

malaria foci fully investigated and classified

94%

confirmed malaria cases that received first-line antimalarial treatment at public sector health facilities

Annual parasite incidence over the life of the programme

¹ Long lasting insecticide treated nets (LLIN): A factory-treated mosquito net made of netting material with insecticide incorporated within or bound around the fibres. The net retains its effective biological activity without re-treatment for 3 years of recommended use under field conditions.
² Annual Blood Examination Rate (ABER): This indicator monitors the percentage of suspected malaria cases that are examined with a parasite-based test.
