

# IMPACT COLLECTIVE

The path to community-driven impact investing

### Who we are

Asia's first and the largest, community-driven investment program accelerating early-stage impact startups in the region

***#co-creation #collective impact #local-driven sustainability***

### Why we started

Asia is the most affected region of the global challenges: the fast growth of their local impact startups with innovative solutions is the key to resolve the challenges and to regenerate the values.

***#collective intelligence #direct impact through capital***

### What we have done

Building a community of local & international players in impact startup ecosystem: public, private, supporters and the builders! 2x Annual acceleration programs applied by 700+ startups from 39+ nations & equity investments in 20+ startups with \$5M fund

***#impact-profit alignment #opportunities for underserved markets***

### What we have learned

Impact Startups have higher demands on **the cross-sectoral partnerships & comprehensive supports** both from the local and international. Investors of Impact Startups have different expectations: **from zero/under return to above the average.**

The acceleration and investment should be much diversified to cater both the needs from Entrepreneurs and investors.

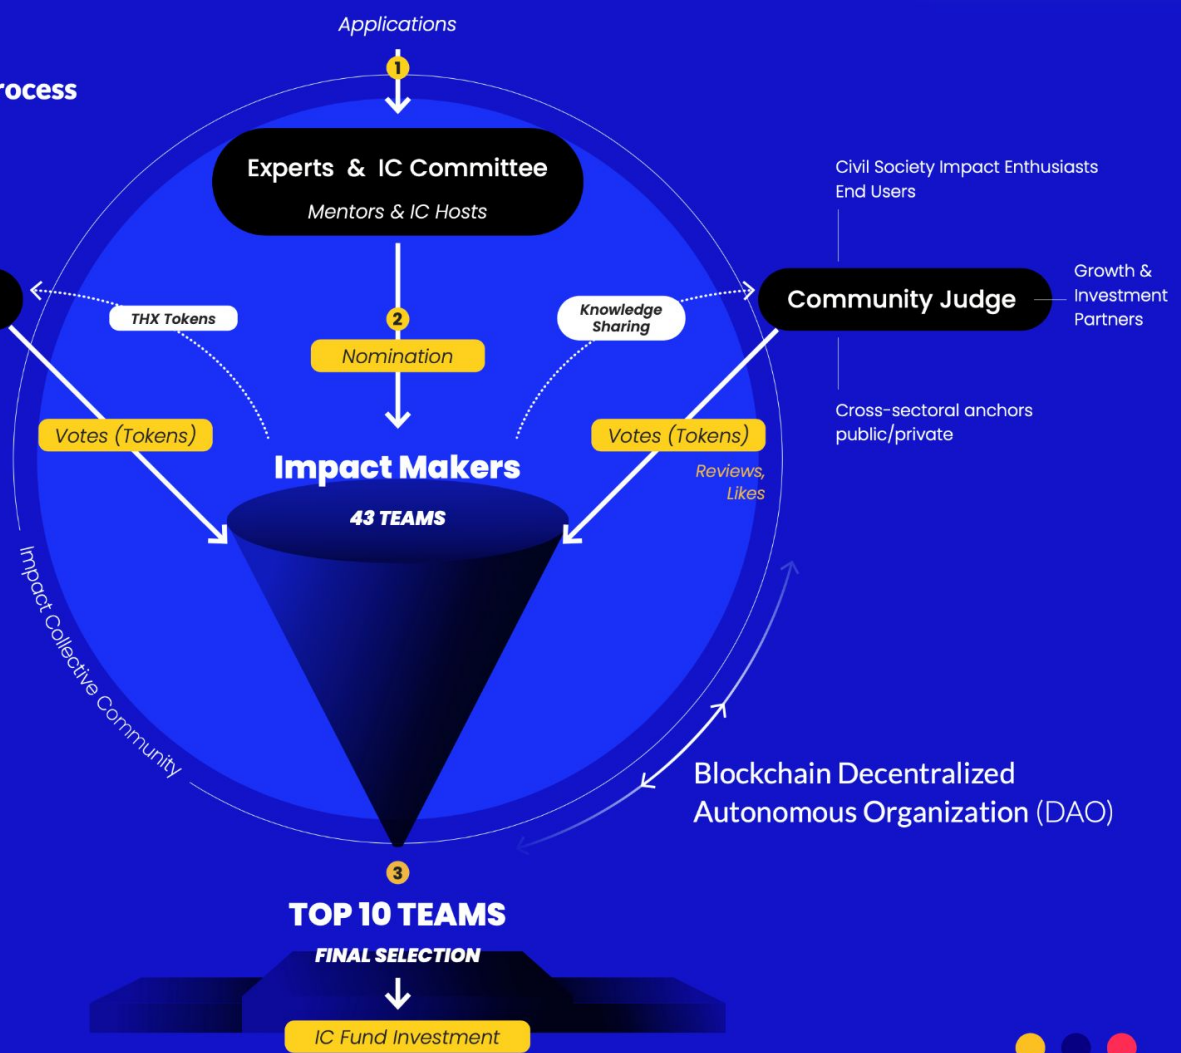

***#diversification #decentralization accelerated #strong community***

## ► Pioneering Asia-Pacific's First Community-driven Investment Process

Impact Collective has created a new and radical investment model that relies on the 'wisdom of the crowd' to democratize capital allocation. Regardless of where they come from and whether they are investment professionals or not, we believe people have the 'collective intelligence' to tell which companies or projects make better impacts on our society and, ergo, which ones are best-suited to receive investments and community support.

The aim of our community-driven approach is to achieve significantly enhanced diversity in the decision-making landscape for sourcing inclusive solutions with greater financial performance, as well as scale positive impact for people and the planet.

Using the framework of the SDGs, we want to invest in startups that place as much importance on making profit as nurturing and protecting our planet, expanding access to digital tools and quality healthcare, and supporting more sustainable and diversified economies/societies.
