

THIS IS ARAL SEA

CONSEQUENCES OF THE TRAGEDY:

Cancer and tuberculosis cases are 50% more frequent than in other regions

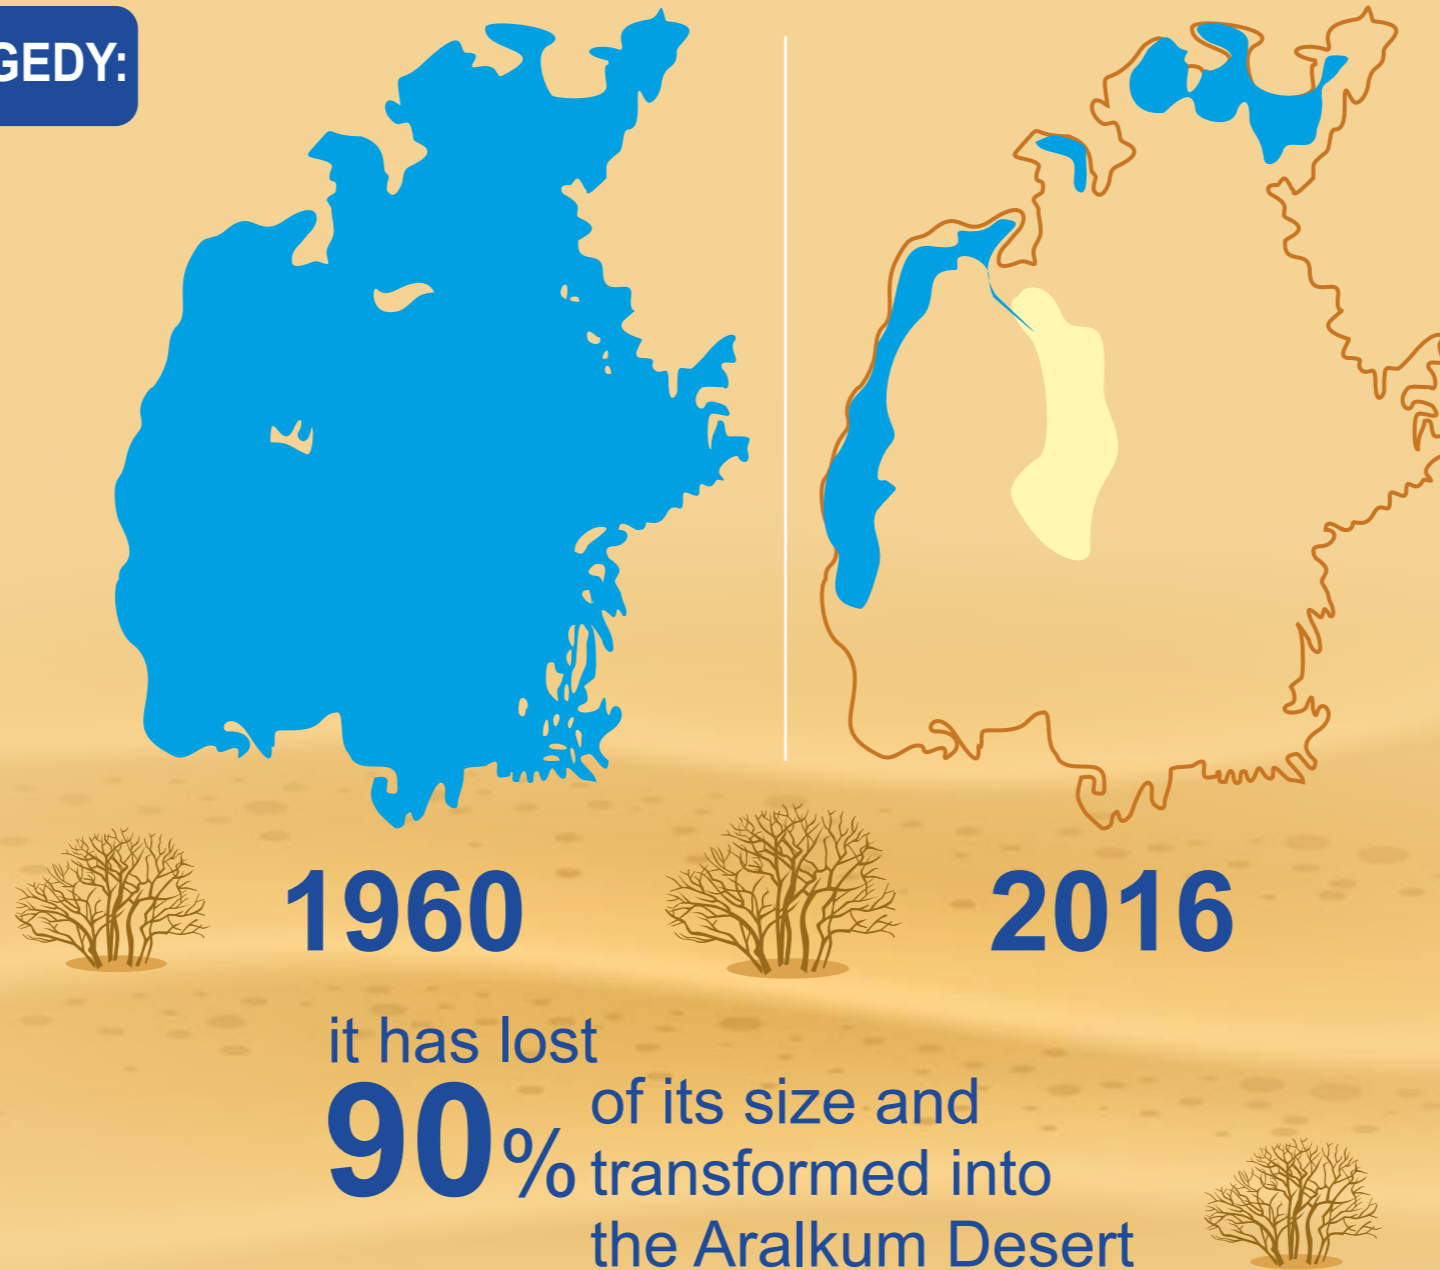

Only half of population has access to safe drinking water

Poverty rate is the highest in the region

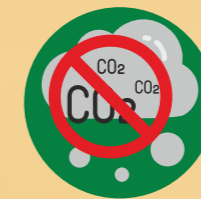

75 million tons of toxic salt and sand are spread every year

OUR GOAL:

Prevent spread of toxic salt and sand across the region

Mitigation of climate change by reducing CO₂ emissions

Cover the seabed with green blanket – improve biodiversity with positive impact on environment

Create and support sustainable livelihoods and opportunities for people in the Aral Sea region

How can you support?

Scan this QR and with just a few clicks you can help us plant

Raise awareness about the tragedy and remind people about consequences of careless attitude towards the environment

Spread information about this initiative and engage more people
