

# CB Country Weekly Highlights

01-05 February 2021

## URUGUAY

### PDNA/CRNA adaptation to National Context

UNDP has been working with the government to strengthen the disaster risk management system in Uruguay, as this area has been recently incorporated into the country's institutional and legal framework. One of the most promising results of this cooperation is a digital platform, MIRA (Monitor Integral de Riesgos y Afectaciones), that helps manage risk and impact information coming from different institutions. During the COVID-19 response, MIRA was extremely useful in guiding the emergency response in the health sector. In this context, the GoU has requested support to adapt the PDNA/CRNA methodology to the national context and expand the MIRA platform to include baseline information by sectors and identify the recovery needs generated by different crisis; the support will include methods and strategies to accelerate data collection for the analysis of the effects, impacts and recovery needs. The CB Disaster Risk and Recovery Team in HQ and the Panama Regional Hub will provide financial and technical assistance for the adaptation of the methodology.
