

# DEBRIS MANAGEMENT

## North East Nigeria

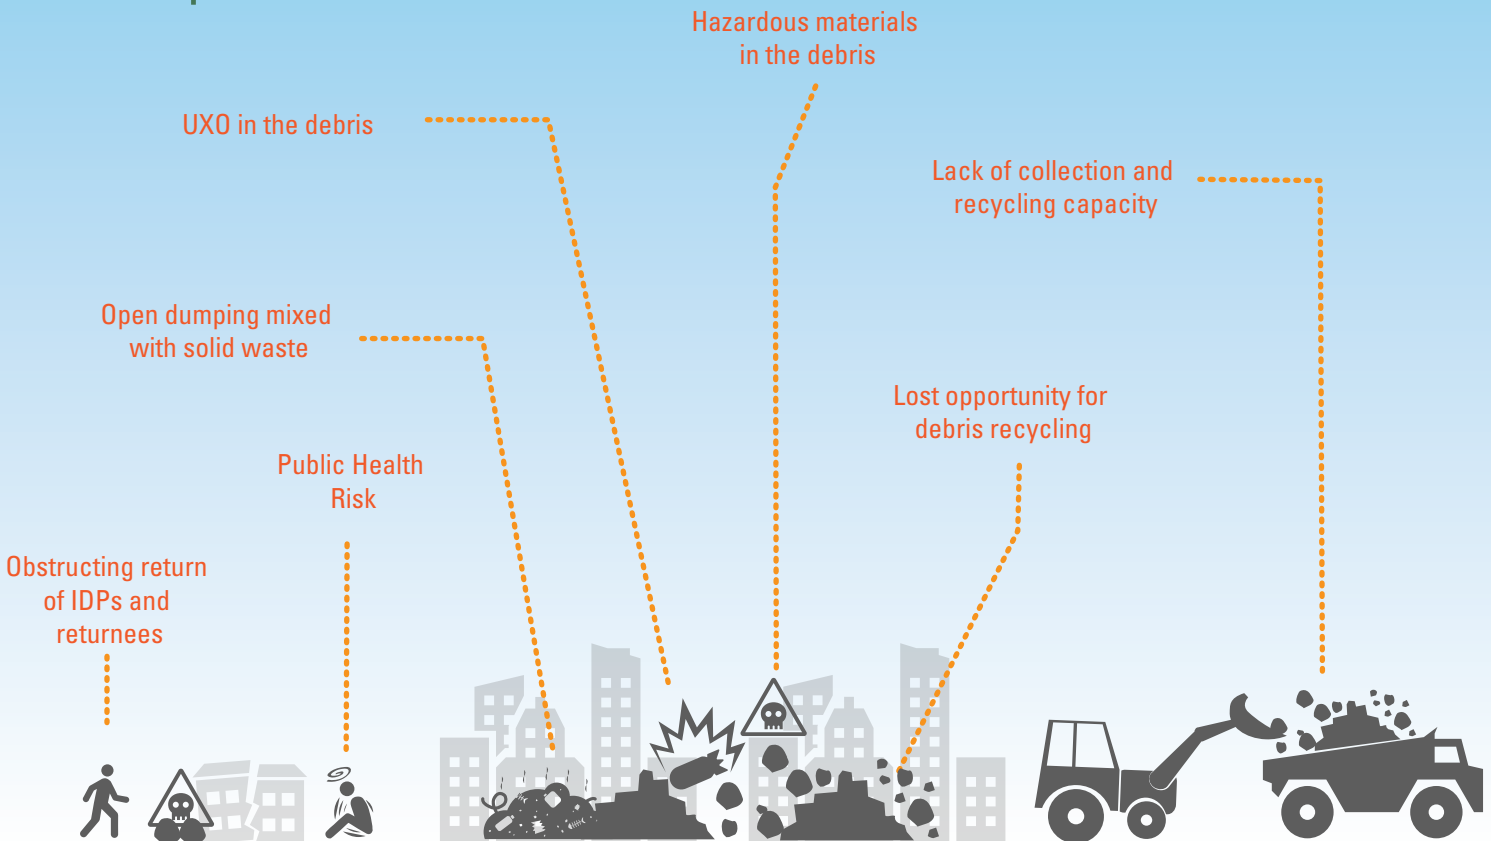

### Current situation

Based on the UNDP and Disaster Waste Recovery (DWR) Debris and Waste Assessment (Jan 2015) there is wide scale damage to homes and public buildings in the North East as a result of the on-going armed conflict between Boko Haram, the Nigerian military and the Multi National Task Force. In the state of Yobe alone more than 20,000 structures have been either destroyed or damaged. The debris from damaged buildings is a health & safety risk to returnees and an obstacle for their safe return unless measures are undertaken for its removal. The assessment recommends the initiation and scale-up of a comprehensive labour intensive debris clearing and recycling program, with safety at its core. This will provide emergency employment as well as opportunities to recover and recycle many valuable materials resulting in long-term sustainable solutions.

### Nigeria's Early Recovery and Livelihoods Sector Working Group

### Current problem

\* Risk Education sits with the Protection Sector Working Group within the 2016 Nigeria HRP framework

Support Early Recovery through

01 Building the resilience of affected communities and enhancing service provision.

02 Restoring disrupted livelihoods.

Will be achieved through:

- Provide safe access to buildings.
- Provide emergency employment opportunities.
- Debris collection.
- Ensure safe handling.
- Reuse and recycle of debris.
- Skills and people.

Implementation activities

PHASE I 0 to 6 month

Area of Damage

- Emergency employment for debris removal.
- MRE training.
- Safe demolition guidelines.
- Truck and equipment rental.
- Community Mobilisers.
- Local Authority capacity building.

Local/State/Federal Capacity Building

- Debris Guidelines including Reuse/Recycling opportunities
- Safe Demolition and Demolition Management
- State-wide Debris management

PHASE II 6 to 12 month

Area of Damage

- Continue EE for debris removal
- Carry out safe demolition

Debris Recycling

Establish debris reuse and recycling enterprises

Durable Solutions

Train IDPs and Youth with debris skills

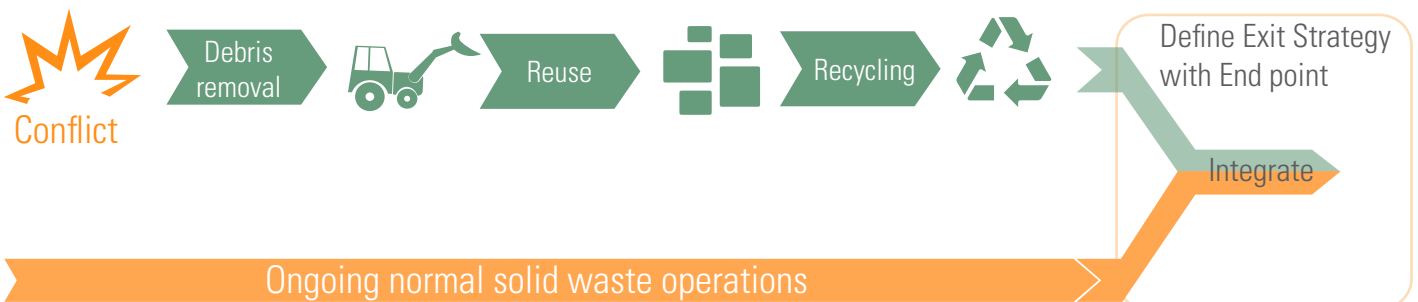

Establish small scale debris recycling operations with IDPs and Youths

FINAL IMPLEMENTATION PHASE

Final Implementation Phase

Ensuring Early Recovery and Livelihoods has a robust exit strategy

Potential partners
