

Empowered lives.
Resilient nations.

ANNUAL PROGRESS REPORT 2016

Comprehensive Disaster Risk Management Programme (CDRMP)

Project beneficiaries, *Tharu communities*, doing well with Fishery, Maadi, Chitwan

OUR PARTNERS

PROJECT PROFILE

About the Project	Geographic coverage of the project	
Project Title: Comprehensive Disaster Risk Management Programme (CDRMP) Award ID :00061320 Web link: www.np.undp.org/cdrmp/	National level coverage (Yes/No): Yes Number of Regions covered: 5 Number of Districts Covered: 55 Number of Municipalities Covered: 37 Number of VDCs Covered: 92	
Strategic Results		
UNDP Strategic Plan Outcome 5: Countries are able to reduce the likelihood of conflict and lower the risk of natural disasters, including from climate change		
UNDP Strategic Plan Output 5.2: Effective institutional, legislative and policy frameworks in place to enhance the implementation of disaster and climate risk management measures at national sublevels		
UNDAF Outcome 7: People living in areas vulnerable to climate change and disasters benefit from improved risk management and are more resilient to hazard-related shocks		
UNDAF/CPAP Outputs: 7.1 Government officials at all levels have capacity to lead and implement systems and policies to effectively manage disaster risks 7.2 Urban populations are better able to prepare for and manage hazard and climate change adaptation risk 7.3 Vulnerable populations have increased knowledge about disaster risk management and capacity for climate change adaptation and mitigation of risks 7.4 National preparedness and emergency systems are able to effectively prepare for and respond to hazard-related disaster		
Project Duration (day/month/year)	Implementing Partner(s)	Implementation Modality
Start Date: 21/02/ 2011 End Date: 31/12/2015 (Original) 31/12/2017(Extended)	Primary Partner: Ministry of Home Affairs. Other partners include: Ministry of Federal Affairs and Local Development, Ministry of Urban Development, National Planning Commission, Ministry of Science, Technology and Environment, Ministry of Forests and Soil Conservation and Ministry of Agriculture Development Kathmandu Valley Development Authority National Government Training Institutions: Nepal Administrative Staff College (NASC) Local Development Training Academy (LDTA) and Tribhuvan University-Central Department of Environmental Science (TU-CDES).	Direct Implementation Modality (DIM)
Project Budget (US\$)		

UNDP Contribution (CPR/BCPR/TRAC): USD 8,072,179.00

1. EXECUTIVE SUMMARY

Comprehensive Disaster Risk Management Programme (CDRMP), started in 2011, is being implemented by UNDP in collaboration with the Ministry of Home Affairs (MoHA) as focal ministry in collaboration with other ministries and line departments including National Planning Commission (NPC). The programme intends to contribute towards achieving Nepal's UNDAF (2013-017) Outcome 7, which states: people living in areas vulnerable to climate change and disasters benefit from improved risk management and are more resilient to hazard-related shocks. The activities implemented in 2016 contribute towards achieving this outcome.

In 2016, results have been achieved under the major four components of CDRMP: (i) Institutional and Legislative Systems for DRM and Capacity Building, (ii) National Building Codes and Risk Sensitive Land Use Plan implementation, (iii) Emergency Preparedness, Response and Early Recovery and (iv) Integrated Climate Risk Management.

CDRMP continued its support and contribution in 2016 to the Government of Nepal's overall effort in improving disaster risk management at community, sub-national and national level through several interventions. UNDP, being co-lead for "policy/institutional support for DRM" to the Ministry of Home Affairs – lead ministry, has begun formulation of National Disaster Risk Management (DRM) Policy and Strategic Action Plan, in line with the Sendai Framework of Disaster Risk Reduction (SFDRR) 2015-2030. A study entitled "Gorkha Earthquake 2015: Experience and Learning" was carried out and the findings were shared with the national stakeholders for informing future interventions. Two episodes on Gorkha Earthquake 2015: Experience and Learning were developed and aired through Nepal TV for wider dissemination. With lead role of National Planning Commission, a Mainstreaming Guideline for Disaster Risk Reduction and Climate Change Adaptation (DRR-CCA) has been drafted in a participatory manner after regional consultations carried out for all the five development regions since 2014 and a national workshop in Sep 2016. A study was carried out on "Risk Informed Development Planning" by the project which was utilized by the National Planning Commission (NPC) for 14th Three-Year Periodic Development Plan. These efforts are expected to contribute to increase in allocations by government ministries in Disaster/Climate Risk Management (D/CRM) from the 4.85% in 2014 (UNDP/CDRMP) in coming years. Disaster Risk Reduction and Climate Change Adaptation (DRR-CCA) focal persons and Gender Equality and Social Inclusion (GESI) focal persons from the key ministries were also oriented towards improved DRM planning and implementation.

While the country is passing through a transition towards recovery from loss and damages due to the April 2015 earthquake, the project mobilized additional resources for facilitating the process of reconstruction in Dolakha, Sindhupalchowk, Kavre and Gorkha districts through awareness raising campaigns and building capacity of municipalities, local masons and working engineers on safer construction in line with owner driven reconstruction model as conceived by the Government. 18,571 people (approximately 40% women) from these districts have been oriented on national building code and safer construction practices. 40 most affected and vulnerable house-owners from 10 VDCs of Sindhupalchowk and Dolakha have initiated construction of Technology Demonstration House (TDH) through on-the-job training of the masons, integrating resources provided by the Government. For effective outreach to affected communities on knowledge and skills relating to safer construction, two technology demonstration centers in Gorkha and six in Sindhupalchok and Kavrepalanchok (two each at Chautara, Panchkhal and Melamchi municipalities) are being constructed. Panchkhal, Chautara and Melamchi municipalities have begun issuing permits through the code-compliant building permit system supported by the project while Chautara municipality has adopted the Risk Sensitive Land Use Plan and Bye-laws, duly endorsed by the municipal council, which was prepared by the project.

Noting the significance and contributions of Emergency Operation Center (EOC) system during the EQ 2015, District Emergency Operation Centers (DEOCs) were established and activated in four

additional districts- Gorkha, Nuwakot, Rasuwa and Solukhumbu, strengthening the network now comprising 56 EOCs across the country including National Emergency Operation Center (NEOC) based in the premises of the Ministry of Home Affairs. Staff working at EOCs and Assistant CDOs and other officials in-charge were oriented for improved disaster information management and functioning of EOCs. National Early Recovery Framework was also prepared as a technical support to the Ministry of Federal Affairs and Local Development.

Community Based Disaster Risk Management activities were implemented mainly in the four districts namely Dolakha, Surkhet, Chitwan and Sindhupalchowk in 2016. The latter two district activities were supported through funding from MDGs Trust Fund Initiative of the Government of Republic of Korea and UNDP (RoK-UNDP). Over 15,000 families have been benefited from livelihood promoting activities, restoration of community small infrastructures and bio-engineering structures in these four districts. Last mile connectivity to safeguard lives from sudden hydro-meteorological disasters has been strengthened by linking DEOCs of Sindhupalchowk, Dolakha, Surkhet and Chitwan with six Early Warning System (EWS) stations established in Maadi, Chitwan, Sindhupalchowk (four locations- Tatopani, Balefi, Sarmangthan, Melamchi) and one in Surkhet and by activation of 14 stations installed at the Tsho Rolpa Glacial Lake in Dolakha. Five Local Disaster Risk Management Plans (LDRMPs) were prepared and five were upgraded in Dolakha while preparation of four LDRMPs commenced in Sindhupalchowk.

Out of the total planned budget of USD 2,856,904.00, US\$ 2,726,277.00 has been spent with 95.42% financial progress in 2016.

Five Key Results achieved in 2016

1. DRM mainstreaming into development planning:

National DRR Policy and Strategic Action Plan formulation has begun under leadership of the Ministry of Home Affairs (MoHA) and in consultation with all DRR stakeholders including donors and development partners. A study report on "Gorkha Earthquake 2015: Learning and Experience" has been printed and to better communicate the learning and experience, two episodes of Video Documentary have also been developed and aired by Nepal Television on 15th October, 2016 (first episode) and on 30th Nov, 2016 (second episode).

Technical support to the National Planning Commission (NPC) on mainstreaming disaster risk reduction in national level planning and implementation process led to a study on "Risk informed planning" ensuring issues of disaster and climate risk management are well addressed in the fourteenth periodic plan 2016/17-2018/019. Consolidation of learning, issues, gaps and way forward for effective mainstreaming of DRR in the planning process was achieved through a Mainstreaming Guideline on DRR-CCA drafted based on a regional level DRR mainstreaming workshop held in Biratnagar for eastern region stakeholders (fourth in series- one for central development was organized in 2015 and two for western-, mid-western- and far-western development regions were organized in 2014) and a national workshop organized in Sep 2016. A has been drafted under leadership of the National Planning Commission following the national and district level consultations.

2. National Building Code Implementation and Risk Sensitive Land Use

Over 500 masons including 25 women and 111 engineers (trainers) have been trained to facilitate earthquake-resistant reconstruction in 14 earthquake affected districts. More than 18,571 house owners (about 40% women) have been oriented on earthquake safe house (re) construction in 114 VDCs/Municipalities of Gorkha, Sindhupalchowk, Dolakha, Kavre, Bhaktapur, Lalitpur and Chitwan through 295 events of awareness raising campaigns. They were oriented through various mediums including audio-visuals by organizing Mobile Technology Clinics (MTCs) or Mobile Van campaigns. Electronic Building Permit System (e-BPS) has been successfully established by Lalitpur Sub-Metropolitan City and Kirtipur Municipality. Kathmandu was the first to launch e-BPS in 2015. Adoption of e-BPS by these municipalities has improved municipalities' performance in e-governance, increasing transparency and accountability and with on-line features the systems have been easier for house-owners to obtain permits and to check their application status. The three municipalities (Melamchi and Chautara of Sindhupalchowk district and Panchkhal of Kavre district) have started implementation of National Building Codes in issuing building permit. Risk Sensitive Land Use Plan (RSLUP) for Chautara municipality was prepared and the plan was approved by the municipality council.

3. Emergency Preparedness and Response

Emergency Preparedness and response capacities have been strengthened through four District Emergency Operation Centers (DEOCs) established, Gorkha, Rasuwa, Nuwakot and Solukhumbu districts, resulting in augmentation of national network of 56 EOCs (1 NEOC, 49 DEOCs, 5 REOCs, and 1 MEOC). Capacities of DEOCs, REOC, NEOC have been enhanced through training on DIMS including integration of SAHANA Disaster Information Management System into the DRR portal for 113 personnel including 5 women and five from NRCS. Assistant CDOs (also in-charge for DEOCs) from 40 EOCs were oriented on preparedness, disaster information management and dissemination. National Early Recovery Framework has been formulated as a part of continued support to the Ministry of Federal Affairs and Local Development (MoFALD).

4. Climate Risk Reduction at community level and Community based Early Warning System

Over 15,000 households/families from 18 VDCs/municipalities of four districts- Surkhet, Chitwan, Sindhupalchowk and Dolakha have been benefitted from community based DRR activities comprising of livelihood improvement, restoration of small infrastructures and bioengineering works. Over 2,200 community members with around 50% women (LDRMCs/CBDRMCs) have been trained/oriented on DRR-CCA, First Aid, Search and Rescue, Livelihood improvement and other orientation trainings.

10 Local Disaster Risk Management Plans (LDRMPs) have been prepared/ revised in Dolakha and preparation of five LDRMPs in Sindhupalchowk initiated.

Community based early warning system in Maadi, Chitwan has been strengthened through 5 Automatic hydrological and meteorological stations set up at Bankatta, Chharchare, Kalyanpur, Govindabasti and Thori. One EWS station has been installed in Sot-khola sub-watershed of Surkhet.

5. House-owner driven reconstruction supported in two districts

Ten VDCs in Sindhupalchok (Sipapokhare, Bhotsipa, Badegaun, Irkhu, Kubhinde) and in Dolakha (Fasku, Katakuti, Lakuridanda, Magapauwa, Boch) has initiated reconstruction of houses with support from the project. 40 most vulnerable, marginalized house-owners are receiving support as beneficiaries of on-the-job-training of 450 local artisans/masons leading to construction of 40 Technology Demonstration Houses. Awareness raising on safer reconstruction has reached about 2475 people through mobile technology clinics (MTC).

2. BACKGROUND AND RATIONALE

Nepal is exposed to risks from a range of natural hazards and human induced disasters. More than 80 percent of the population is at high risk of natural hazards, like floods, landslides, windstorms, hailstorms, fires, and Glacial Lake Outburst Floods (GLOFs). The country is among the 20 most disaster-prone countries in the world. In part, this is because Nepal is located in a seismically active zone with a high risk for a massive earthquake. Globally, Nepal ranks 4th and 11th in terms of its relative vulnerability to climate change (Maplecroft, 2011) and earthquakes (MoHA, GoN, 2015) respectively. Out of 21 cities around the world that lie in similar seismic hazard zones, Kathmandu city is at the highest risk in terms of impact on people.

The Ministry of Home Affairs and other ministries and departments have been the main agencies of the Government of Nepal to reduce the disaster risks in Nepal in collaboration with development partners. In this context, CDRMP was launched in 2011 with an aim to support the Government of Nepal to strengthen the institutional and legislative aspects of Disaster Risk Management (DRM) by building the capacity of the Ministry of Home Affairs, other line ministries and local governments. In addition, its objective was also to support implementation of the Government of Nepal's National Strategy for Disaster Risk Management (2009).

UNDP, being coordinating agency in Nepal for the erstwhile Nepal Risk Reduction Consortium (NRRC) Flagship Area 5: Policy and Institutional Support for Disaster Risk Management, has been supporting the GoN in policy and institutional systems as well as to enhance communities' resilience to manage the effects of disaster and climate risks. The support has been even more relevant in the context of post EQ 2015 for ensuring safe construction/reconstruction practices in the EQ affected districts. The CDRMP is being implemented by UNDP in Nepal since 2011 with UNDP's internal resources (CPR TTF, TRAC) and financial support from several donors, which include: DFID, ECHO, World Bank, UNISDR, Government of Japan and KOICA. Together, these partners aim to address the issues and challenges concerned with disaster and climate risks in Nepal.

3. PROJECT SUMMARY AND OBJECTIVES

UNDP has been implementing Comprehensive Disaster Risk Management Programme since 2011 as part of the Strategic Partnership Framework (SPF), signed between the Geneva based UNDP/BCPR and UNDP Nepal and in accordance with the Nepal Risk Reduction Consortium. The programme aims to strengthen the institutional and legislative aspects of disaster risk management (DRM) in Nepal by building the capacities of MoHA, MoFALD, other partner ministries, departments and local governments as well as empowering vulnerable communities toward increased resilience. The programme intends to contribute towards achieving Nepal's UNDAF Outcome 7, which states: people living in areas vulnerable to climate change and disasters benefit from improved risk management and are more resilient to hazard-related shocks.

The programme comprises of five components as briefly mentioned below:

1. Institutional and Legislative System for DRM and Capacity Development:

This component focuses on two aspects: i) support the GoN in formulating, amending and implementing policy and legal frameworks in coordination with the concerned government and non-government institutions; and ii) focus on enhancing the capacities of government officials as well as personnel from non-government organizations (NGOs), private companies and local communities. The two leading government training institutions are NASC and Local Development and Training Academy (LDTA). Both have been supporting CDRMP in building the capacities of government and other officials. Additionally, CDRMP has been mainstreaming D/CRM into academia through TU-CDES. (This component contributes to CPAP output 7.1).

2. National Building Codes (NBC) Implementation and Risk Sensitive Land Use Planning (RSLUP):

Under this component, CDRMP aims to support the Kathmandu Valley Development Authority (KVDA) and the DUDBC for safer building construction practices in municipalities and VDCs of Kathmandu Valley. It also supports policy revision and implementation. (This component contributes to CPAP output 7.2).

3. Integrated Climate Risk Management (ICRM):

This component aims to enhance the capacities of local communities in responding to disaster and climate risks. It focuses on training local communities on the early warning system, search and rescue, and other social and technical aspects. It also promotes Climate Change (CC) Adaptation measures (i.e. income generation activities, plantations, etc.), and supports the implementation of community based disaster risk management plans (CBDRMPs) in coordination with NRRC Flagship 4 partners. (This component contributes to CPAP output 7.3).

4. Emergency Preparedness and Response and Early Recovery (EPRER):

This component focuses on strengthening the national capacity for emergency preparedness, response and early recovery. It supports the GoN on policy and legal frameworks, enhances the capacity of first responders, builds a network of EOCs and focuses on strengthening early recovery network and ER capacity building initiatives. (This component contributes to CPAP output 7.4).

5. Nepal Risk Reduction Consortium Flagship 5 (F5):

As the focal organization in supporting the facilitation of Flagship 5 (F5), UNDP has been working on different initiatives in coordination with NRRC consortium members and other stakeholders for policy and institutional strengthening on D/CRM. (This component contributes to CPAP output 7.1).

Crosscutting issues such as Gender Equality and Social Inclusion (GESI), Monitoring and Evaluation (M&E) and Knowledge Management & Communication have been integrated in all of the above components.

Theory of Change (ToC) of CDRMP

UNDP intends to bring changes at different levels, from community to policy level, through implementation of CDRMP activities. Contributing to the spirit of "*Managing for Development Results (MfDR)*" achievements of CDRMP lie in bringing changes in the contexts of DRM in the country at wider level rather than just outputs from the implemented activities. Support to vulnerable communities associated in Local Disaster Risk Management Committee for their plan (LDRMP) preparation and implementation and capacity building effort involve local stakeholders like VDCs, DDCs and other government and non-government actors, which ultimately lead to improved DRM at local levels by all concerned. Other areas supported by CDRMP include capacity building of professionals, masons and Kathmandu valley authorities including municipalities for effective implementation of NBC and RSLUP for safer building construction practices. Support to the ministries and departments for policy, legal frameworks and capacity building initiatives of CDRMP contributed for improved institutional and legislative system in DRM in the country. Integration of D/CRM into periodic development plans including D/CRM monitoring framework developed by NPC further contributes in progressive national effort of DRM. Support to MoHA for operationalization of EOCs network across the country involve other stakeholders as well which is expected to contribute at wider level for emergency preparedness, response and for recovery effort through disaster information management systems. CDRMP's priority of integrating GESI and M&E and Knowledge Management across the programme components reinforce the overall intended changes in the DRM sector in Nepal.

Thus, with regard to natural disasters, UNDP is best placed to: help operationalize DRR plans and priorities through effective use of UNDP's engagement on governance issues whether legislative and regulatory frameworks to set normative standards, systems for accountability and reporting, coordination and delineation of roles and responsibilities in decentralized settings, and/or application of 'whole-of-government' and 'whole-of-society' approaches that bring together government agencies with civil society and the private sector; strengthen country institutional capacities, from end-to-end early warning systems that cover the full spectrum of risks to contingency planning, development of local government and community based disaster preparedness measures, such as evacuation, search and rescue, and implementation of cost-effective communication systems; incorporate gender-sensitive approaches to address the specific roles, responsibilities and vulnerabilities affecting women and girls.

Thus, above explanation on ToC of CDRMP complies with all the three major criteria/principles of: (i) plausibility- because the intended changes are logical, (ii) feasibility- they are feasible and being achieved, and (iii) testability - changes can be assessed with the pre-determined set of criteria and indicators.

Assumptions:

1. Governments have the lead responsibility for DRR, to establish effective policy and legislative frameworks provide resources and capacity to implement comprehensive DRR, and ensure the safety of citizens.
2. Development partners will successfully align with national frameworks and coordinate and collaborate to maximize complementary strengths and minimize duplication.
3. Partnerships are critical as no single group or organization is in a position to address all aspects of DRR.
4. Synergies between DRR and climate change adaptation make practical sense as part of an integrated risk management framework that can address issues across different time scales.
5. Participation of women, communities and community-based organizations is vital, not just an option.

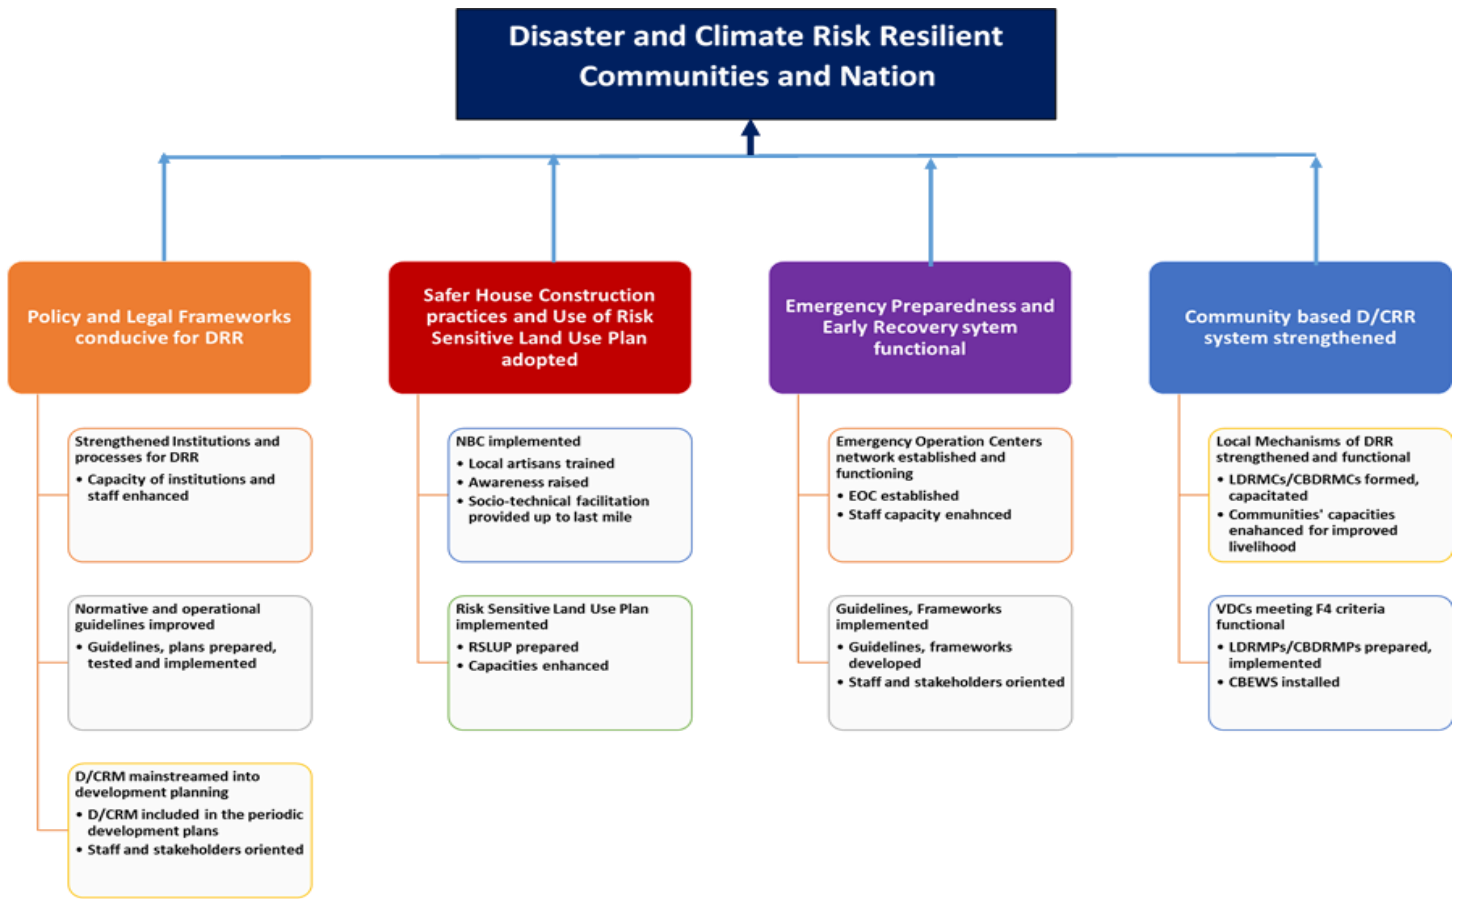

Fig 1: Schematic Diagram of CDRMP's ToC

Risk and mitigation measures:

Risk	Risk Mitigation Strategy
Occurrence of disasters that redirect attention and resources to emergency response and recovery, away from addressing the underlying causes of disaster risk.	Working with national and international partners to ensure that DRR approaches are fully integrated into recovery responses; 'building back better'.
Weak and uncertain governance arrangements with negative implications for establishing effective institutional and policy arrangements for DRR.	Building national capacities and forging partnerships for DRR at the local level, especially with elders and community leaders, who can encourage and promote risk reduction.
Poor security or violence that hampers access to high risk areas and vulnerable populations.	Ensuring better coordination with actors – national, UN or bilateral - engaged in peace-building or violence reduction efforts, so that access to high-risk populations can be secured.
Sustained engagement in and support for DRR is not possible due to reliance on short-term funding sources, i.e. from humanitarian assistance, instead of dedicated allocations for DRR from development budgets.	Sustained advocacy on the concrete benefits of effective DRR; better measurement and dissemination of evidence on the impact of successful DRR; high quality advice on practical policy and investment options.

Risk	Risk Mitigation Strategy
Constraints on commitment to institutionalising and prioritising DRR in view of other more pressing or urgent needs; and risk of political changes affecting country priorities.	Same as above, but with national advocates and counterparts, and in alignment with national budget cycles.
Brain drain and frequent turn-over or transfer of staff.	Securing agreement with national counterparts on stable resourcing of core DRR functions and institutions. Developing targeted remedial options such as training and orientation, use of South-South staff exchanges, and utilisation of UNVs.

4. PROGRAMMATIC REVISIONS

To address the needs of EQ 2015 affected families of Dolakha, Sindhupalchowk, Kavre and Gorkha districts, some additional initiatives have been carried out in 2016. Under funding from the Government of Japan, NBC implementation has been supported in the three earthquake affected municipalities (Panchkhal, Melamchi and Chautara). Similarly, through additional resources mobilized from ECHO, house-owner driven reconstruction is being facilitated. In addition, exchange and learning from disaster management have been initiated in Surkhet and Sindhupalchowk districts under Community based Disaster Management (CBDM) phase II. Besides, UNDP has mobilized TRAC fund as well for technology development, testing and demonstration such as the Galvanised Iron (GI) containment stone-mud masonry housing, Compressed Stabilized Earthen Block (CSEB), upcycled debris block preparation, re-clustering of settlements and training of masons and trainers on safer constructions. Some of these initiatives are planned to be completed in 2017, which justifies extension of CDRMP till end of 2017. PEB meeting held on 20 Nov 2016 has accordingly approved the extension of the project till Dec 2017.

5. NARRATIVE ON KEY RESULTS ACHIEVED IN 2016

CDRMP contributes for Outcome 7 of the current UNDAF (2013-017). The table given below shows the linkage of UNDAF outcome and associated UNDAF output statements that the project contributes for. The four outputs, as in the below table, of the CPAP have been contributed through implementation of CDRMP activities under various components.

Table 1: Outcome and Output Statements

Outcome Statement	Output Statement
Outcome 7: People living in areas vulnerable to climate change and disasters benefit from improved risk management and are more resilient to hazard-related shocks	Output 7.1: Government officials at all levels have the capacity to lead and implement systems and policies to effectively manage disaster risks and adapt to climate change
	Output 7.2: Urban populations are better able to prepare for and manage hazard and climate change adaptation risk
	Output 7.3: Vulnerable populations have increased knowledge about disaster risk management and capacity for climate change adaptation and mitigation of risks
	Output 7.4: National preparedness and emergency systems are able to effectively prepare for and respond to hazard-related disasters

5.1 Progress towards the UNDAF Outcome and CPAP Outputs

The CDRMP outputs contribute to the four outputs of CPAP and ultimately to the CPAP Outcome 7 as shown in table 1 above. The key achievements of CDRMP against the CPAP outputs have been mentioned in the table 2 below:

Table 2: Progress on Outcome Indicators

CPAP Output Statements	Outcome indicator	Baseline	Cumulative Target for 2013 - 2017	Total target achieved till 2015	Milestone for 2016, if any	Achievement 2016	Year for the latest data	Source of data
Outcome 7: People living in areas vulnerable to climate change and disasters benefit from improved risk management and are more resilient to hazard-related shocks								
Output 7.1: Government officials at all levels have the capacity to lead and implement systems and policies to effectively manage disaster risks and adapt to climate change	% of resources allocated for disaster risk management and climate change in each of the eight key ministries (Ministry of Home Affairs, Ministry of Physical Planning and Works, Ministry of Local Development, Ministry of Agriculture and Cooperatives, Ministry of Health and Population, Ministry of Forests and Soil Conservation and Ministry of Environment	no allocation	5%	4.85%	Continues support to NPC for D/CRM mainstreaming in Development planning	A regional workshop held in Biratnagar, National workshop held in Kathmandu. 14 th 3-year plan contributed through "Risk Informed Planning" study; mainstreaming guideline for DRR-CCA drafted.	2016	CDRMP
Output 7.2 Urban Populations are better able to prepare for and manage hazard and climate change adaptation risk	National Building Codes implemented in municipalities of Kathmandu Valley	0 VDCs in KV, No RSLUP, 0 Municipality outside KV	6 urbanizing VDCs and 3 municipalities, and KMC/LSMC in KV. 3 municipalities outside KV	6 VDCs, 3 municipalities and in KMC and LSMC. 3 municipalities outside KV	Further strengthening in KV. NBC implementation started in 3 municipalities. Support to 3 municipalities outside KV	Kirtipur and LSMC launched e-BPS. Chautara, Melamchi and Panchkhal municipalities started NBC implementation	2016	CDRMP
Output 7.3 Vulnerable populations have increased knowledge about disaster risk management and capacity for climate change adaptation	VDCs/Municipal wards fulfil at least 3-4 of the minimum characteristics of Disaster Resilient communities as per FS 4	187 VDCs for NRRC (national target) 0 for UNDP	100 VDCs/wards of municipalities by UNDP	63 VDCs	Further strengthening to maintain at least 3-4 characteristics achieved earlier	3 VDCs Kunathari, Lekhgaun and Gardi) in Surkeht, 1 municipality (Maadi) of Chitwan, 3 VDCs (Haibung,	2016	CDRMP

CPAP Output Statements	Outcome indicator	Baseline	Cumulative Target for 2013 - 2017	Total target achieved till 2015	Milestone for 2016, if any	Achievement 2016	Year for the latest data	Source of data
and mitigation of risks						Bhotechaur, Thakani), 4 wards of Melamchi municipality (earlier Sindhukot and Bansbari VDCs), 10 VDCs (Kalinchowk, Lamidanda, Babare, Lapilang and Khopachagu, Marbu, Khare, Suri, Jhayku, Chankhe) in Dolakha supported with CBDRM activities. 10 LDRMPs in Dolakha reviewed/prepared.		
Output 7.4 National preparedness and emergency systems are able to effectively prepare for and respond to hazard-related disaster	National Coverage of Emergency Operation Centers increased	1 NEOC in 2011. 1 NEOC, 16 DEOCs in 2013	30 districts	45 DEOCs, 1 NEOC, 5 REOC and 5 MEOCs.	Additional 4 DEOCs replacing 4 MEOCs as per MoHA/MoFALD decision.	4 DEOCs (Rasuwa, Nuwakot, Gorkha and Solukhumbu) established/activated.	2016	CDRMP

Progress towards Outcome 7:

UNDP through CDRMP has been supporting the National Planning Commission for better integration of Disaster and Climate Risk Management in sectoral planning and implementation. A study carried out by CDRMP in 2014 revealed that around 5% of resource allocation from the key ministries is directed for D/CRM and it needs to be increased. In 2016, a study entitled "Risk Informed Development Planning" was carried out to support NPC for better integration of D/CRM in the Approach Paper for the 14th Three-Year plan. Further, national stakeholders were oriented at regional level (eastern region) and central level towards better integration of D/CRM into planning; the workshops concluded that NPC would lead implementation of the action plans for budget planning agreed during the consultations. These efforts are expected to facilitate increased resource allocation by the key ministries in coming fiscal years.

The other areas CDRMP has been supporting the GoN are to institutionalize the implementation of National Building Codes and project has already achieved remarkable progress in Kathmandu Valley. Kathmandu Metropolitan City (KMC) in 2015 and Kirtipur Municipality and Lalitpur Sub Metropolitan City (LSMC) in 2016 have formally launched electronic building permit system (eBPS) which has made obtaining permits easy for house-builders as well as municipality through streamlined and efficient processes leading to improved governance. Manual Building Permit system has been adopted by 8 other municipalities in the Kathmandu Valley. Due to increased significance after EQ 2015, NBC implementation has begun in Panchkhal municipality of Kavre district and Chautara and Melamchi of Sindhupalchowk district. Similarly, Risk Sensitive Land Use Plan (RSLUP) has been drafted for Chautara Municipality after the successful completion and ownership of RSLUP for KV by Kathmandu Valley Development Authority (KVDA).

The project's effort towards making communities disaster resilient is continued. Over 17,000 families from Sindhu-khola sub-watershed of Sindhupalchowk and Riu-khola sub-watershed of Maadi Chitwan have been benefited through project activities. The outcomes of the project intervention since 2012/013 are visible-CBDRMCs are able to implement and increase partnership with other projects and stakeholders and in 2016 19 CBOs (CBDRMCs, Forest User Groups, Women Networks) successfully implemented resilience-building project activities under MCG, which shows increased institutional capacity of CBDRMCs/CBSOs and thus, community level resilience building.

National Emergency Operation Center (NEOC) and its network with DEOCs and REOCs have been doing well in disaster information collection and dissemination during pre-, during and post disaster context. Experience of 2015 EQ was quite encouraging as DEOCs, REOCs and NEOCs played vital role in disaster information collection and dissemination. Based on the learning, 4 additional DEOCs were established, one each in Rasuwa, Nuwakot, Solukhumbu and Gorkha and overall disaster information system through EOC network is improvin

5.2 Progress on Project Outputs

This section provides details of the activities accomplished by CDRMP in 2016. The narrative in this section has been articulated with the different accomplishments that contribute to the respective CPAP outputs. The table 3 in this section provides details of the progress against the indicators for project level outputs.

Table 3: Progress on Output Indicators

Project Output statement	Output indicator	Baseline	Cumulative Target for 2013 - 2017	Progress up to 2015	2016 Milestone	2016 Progress	Cumulative progress up to 2016	Means of verification
CPAP Output 7.1: Government officials at all levels have the capacity to lead and implement systems and policies to effectively manage disaster risks and adapt to climate change								
National DRR/CCA policy frameworks supported, Focal points are capable of coordinate D/CRM functions,	Development of National DRR Policy and Strategic Action Plan	No DRR Policy, No Strategic plan in SFDRR context (Jan 2016)	Development of National DRR Policy and Strategic Action Plan	Conceptualized, discussed with MoHA	National DRR Policy and Strategic Action Plan document prepared	Inception meetings held, works started with wider consultation	Inception meetings held, works started with wider consultation	Inception reports, consultation report
	Documentation of "Response and Learning of Gorkha EQ 2015"	No proper documentation under MoHA's ownership (Jan 2016)	A study and Video-documentary	NA	1 Study report, Video-documentary	Study "Gorkha EQ 2015: Response and Learning" carried out, two volumes of Video-documentary developed, aired by Nepal TV	Study "Gorkha EQ 2015: Response and Learning" carried out, two volumes of Video-documentary developed, aired by Nepal TV	Study report/printed, Video-documentary

Project Output statement	Output indicator	Baseline	Cumulative Target for 2013 - 2017	Progress up to 2015	2016 Milestone	2016 Progress	Cumulative progress up to 2016	Means of verification
	"Landslide Hazard Assessment in EQ affected districts"	No study after EQ 2015 (Jan 2016)	One study to be carried out	Conceptualized	Completion of the study	Study carried out through TU	Study carried out through TU	Study report
	Development of Mainstreaming Guideline for DRR-CCA	No baseline (Jan 2016)	Guideline developed under NPC ownership	Conceptualized	Preparation of Guideline	Guideline drafted	Guideline drafted, submitted to NPC for feedback	Guideline document
	Risk Inform Planning for DRM mainstreaming	No such specific study under NPC ownership (Jan 2016)	One study to be carried out	Conceptualized	Completion of the study	Study carried out	Study done under leadership of NPC	Study report
Districts level stakeholders are capable for integrating D/CRM (GESI integrated) into the bottom up planning process with considerable fund allocations for D/CRM	Regional and district level GoN Officials oriented on D/CRM mainstreaming at local level	No orientation to district officials before 2014	Officials of all 5 development regions oriented	Officials of central, western, mid-western and far-western oriented	consultation for eastern development region and national workshop	consultation for eastern development region and national workshop organized	Over 500 Government officials and stakeholders benefitted through 4 regional and 1 national consultation workshops. done.	Workshop reports
	No. of studies (theses, community works and case studies) undertaken by the university focusing on D/CRM	No D/CRM specific research effort	Theses - 24 Case Studies-30, Community works-40	Theses - 18 Case Studies-22, Community works-30	Theses - 6 Case Studies-8, Community works-10	Theses - 6 Case Studies-8, Community works-10	Theses: 24 Case Study: 30, Community Works: 40	Report

Project Output statement	Output indicator	Baseline	Cumulative Target for 2013 - 2017	Progress up to 2015	2016 Milestone	2016 Progress	Cumulative progress up to 2016	Means of verification
Capacities of CTEVT's Trainers (140) enhanced and local masons (280) trained on safe construction in post EQ 2015 scenario	# Curriculum revised # No. of Trainers trained # No. of masons trained in EQ affected districts	Inadequate trained masons in EQ affected districts	1 curriculum revised, 140 trainers and 280 masons trained	1 curriculum revised, 65 trainers (4 women) and 176 masons (4 women) trained	75 trainers and 204 masons trained	81 trainers including 3 women and 200 masons with 11 women trained	1 curriculum revised, 146 trainers (7 women) and 376 masons (15 women) trained	Curriculum, training reports
CPAP Output 7.2 Urban Populations are better able to prepare for and manage hazard and climate change adaptation risk								
Implementation of building code strengthened at municipality level started in 6 VDCs: (Gongabu, Dhapasi, Jorpati, Mahankal, Imadole and Balkot), 3 municipalities (Kirtipur, Madhyapur and Bhaktapur) and KMC and LSMC	# No. of municipalities and VDC of KV implementing NBC # e-BPS operationalized in KMC and LSMC	No NBC implementation in KV	NBC implemented in 3 municipalities and 6 VDCs of KV, e-BPS operationalized in KMC and LSMC	NBC implementation started in 6 Urbanizing VDCs 3 municipalities. e-BPS in KMC operationalized	e-BPS launched by LSMC and Kirtipur municipality	e-BPS launched by LSMC and Kirtipur municipality	NBC implementation started in 6 Urbanizing VDCs 3 municipalities. e-BPS in KMC, LSMC and Kirtipur operationalized	Report

Progress on Output - Government officials at all levels have the capacity to lead and implement systems and policies to effectively manage disaster risks and to adapt to the climate change. (UNDAF/CPAP Output 7.1).

The project continued support to the government agencies for strengthening policy and legal frameworks in the context of Third World Conference on Disaster Risk Reduction (WCDRR), Sendai 2015, the mega Gorkha Earthquake 2015 and Asian Ministerial Conference on Disaster Risk Reduction (AMCDRR), New Delhi 2016. Technical support to the Ministry of Home Affairs (MoHA) has been provided to conduct a study on "Gorkha Earthquake 2015: Learning and Experience"; the study has been completed and the report in the form of a book has been printed out. For wider sharing, the report is being translated into English as well. Further, to better disseminate the learnings and experience, two episodes of Video Documentary have also been developed and aired by Nepal Television on 15th October, 2016 (first episode) and on 30th Nov, 2016 (second episode).

Cover page of the Book - "Gorkha EQ 2015: Experience and Learning"

In the context of the Sendai Framework 2015-2030, National DRR Policy and Strategic Action Plan formulation has also begun under leadership of the Ministry of Home Affairs (MoHA) and in consultation with DRR stakeholders including donors. In order to improve the overall institutional systems for disaster risk management & climate change adaptation, orientation workshop was organized in Sep 2016 for the national DRR/CCA focal point system to strengthen the operational and technical capacities of senior officials of different ministries and departments who are responsible for ensuring DRR/CCA as a policy priority, allocating sufficient financial resources and encouraging multi-stakeholder partnerships for implementation.

NPC Vice-Chair Dr. Yubaraj Khatiwada, UNDP DCD Ms. Sophie Kemhadze and other guests in regional workshop, Biratnagar

Similarly, technical support to the National Planning Commission is continued for mainstreaming the disaster risk reduction in national level planning and implementation process. A study was carried out on "Risk informed planning" with an objective to ensure the issue of disaster and climate risk management is well addressed in the fourteenth periodic plan 2016/17-2018/019. Further, a regional level DRR mainstreaming workshop was held in Biratnagar for eastern region stakeholders, this was the fourth in series- three were organized in 2015. Following up these regional workshops, a national workshop was also organized in Sep 2016 to consolidate the learning, issues, gaps and way forward for effective mainstreaming of DRR in the planning process. A mainstreaming guideline for DRR-CCA has been drafted

under leadership of the National Planning Commission.

In order to support the Government of Nepal for developing a pool of trained masons in EQ affected districts, UNDP has been training trainers and local working masons for safer constructions in partnership with Council for Technical Education and Vocational Training Centre (CTEVT). During the progress period, 4 events of Master ToT was organized and 81 trainers including 3 women were trained. In addition, ten events

of masons training were conducted in different districts and a total of 200 masons including 11 women were trained.

A study entitled "Landslide Hazard Assessment in EQ affected districts" has also been carried out for Gorkha, Dhading and Rasuwa districts with technical support from Tribhuvan University's Mountain Engineering Research Unit (MERU).

Progress on Output - Urban Populations are better able to prepare for and manage hazard and climate change adaptation risk. (UNDAF/CPAP Output 7.2).

This component of CDRMP has been addressing the issues of safer constructions practices through national building code implementation and implementation of risk sensitive land use plans. The scope of this component has been expanded, merely in Kathmandu valley earlier, outside the Kathmandu valley in the context of post-Earthquake (EQ) 2015. The project activities have been carried out in Gorkha, Sindhupalchowk, Kavre and Dolakha districts in addition to the Kathmandu Valley in awareness raising, technology research and demonstration, and providing institutional support to the municipalities. The key achievements made in 2016 have been briefed below.

UNDP/CDRMP has been supporting KMC and LSMC for electronic-building permit system (eBPS) since 2012. KMC formally launched the system in 2015. The project continued support to Lalitpur Sub-metropolitan city and in addition to Kirtipur municipality as well in establishment of electronic-building permit system (eBPS). Both the municipalities have successfully established the system and formally launched implementation of eBPS in 2016 under their jurisdiction.

e-BPS launch event, Lalitpur Sub-Metropolitan City

Design competition for rural housing -“Design Competition of Rural Housing, 2015” was organized between 29th Dec 2015- 1st Jan 2016 in

Hon'ble PM KP Oli distributing prizes for selected designs for rural housing

coordination with the Ministry of Urban Development and in technical support from Nepal Engineers Association (NEA). Applications were called from the two categories: professional and student. Initially, 138 participants for professional and 75 for student category registered for the competition. However, only 62 designs (47 designs from professional and 15 from student) were received. Total of 18 designs (14 from professional and 4 from students) were finally awarded as replicable designs. Then Hon'ble PM Mr. K.P. Oli distributed the award in the ceremony in which over 300 participants from different institutions took part. The PM acknowledged the effort and shared that the selected from the winning ones would be further considered for replication in

recovery/reconstruction effort. Following the design competition, a joint technical evaluation committee led by MoUD further reviewed the submitted designs and final 15 designs have been submitted to MoUD for endorsement and inclusion in the Housing Technology Catalogue Volume-II in order to support safer reconstruction in the EQ affected districts. Moreover, UNDP/CDRMP also supported DUDBC in finalization of the Volume II catalogue on alternative technologies, through procurement of experts in reviewing the

submitted technologies. The selected technologies have been forwarded by DUDBC to MOUD for formal approval.

Awareness raising activities for safer house construction at rural level were conducted in various VDCs and few municipalities in Sindhupalchowk, Gorkha and Dolakha districts. A new initiative of UNDP - "Mobile Video Van- MTC Campaigns" was mobilized in over 114 VDCs in the three districts through which over 18,571 house owners/farmers were oriented on earthquake safe house construction practices. Similarly, intensive technical counseling at house level was also conducted through another initiative "One Mason One VDC- Awaas Nirman Sathi (ANS)". ANS-trained/lead mason was oriented and sent to VDC level for providing on-site technical suggestions to house owners. ANS could reach about 2,000 HHs in 54 VDCs of Sindhupalchowk.

Local people being oriented on safer construction through Mobile Campaigns, Ramche VDC, Sindhupalchowk

Similarly, technological research and demonstration for supporting reconstruction in the EQ affected districts, piloting

Compressed Stabilized Earthen Block (CSEB)
Demonstration House, Saraswati HS School, Gorkha
Bazaar, Gorkha

of four different initiatives namely (i) construction of prototype for GI contained stone masonry building, (ii) construction of prototype for Compressed Stabilized Earthen Block (CSEB), (iii) upcycled Debris Block preparation and (iv) re-clustering of settlement have been successfully completed and the results are going to be disseminated. The fourth one is about the innovative idea, for developing re-clustering approach and process manual by the Government of Nepal. The concept has been piloted in Majhigaun, Melamchi area of Sindhupalchowk district.

Similarly, UNDP/CDRMP has been providing support in preparation and follow up of guidelines and strategic documents for the Government of Nepal and its line agencies to reinforce safer building construction practices. Such as, the

Retrofitting Guideline, which is a three volume document, has been endorsed and approved by MoUD. The Risk Sensitive Land Use Plan (RSLUP) Guideline have been submitted to MoFALD and is in the process of endorsement. Similarly, RSLUP for Kathmandu Valley is in the process of endorsement at Kathmandu Valley Development Authority.

UNDP through CDRMP has initiated for implementation of national building code (NBC) in three municipalities of EQ affected districts - Chautara and Melamchi of Sindhupalchowk district and Panchkhal of Kavre district with the funding support from the Government of Japan (UNDP-Japan Trust Fund). The main objective of this intervention is to support the three municipalities for code compliant constructions. All the three municipalities have been provided with technical support (deployment of two Civil Engineers/architects at each of three municipalities) and some equipment for establishment of NBC unit. The key progress made in these three municipalities include:

- all these three municipalities have started checking NBC compliance applications and issuing the construction permission with revised building permit application form in place. With support from project, 210 applications were approved out of 270.
- weekly orientation on NBC implementation for public is being conducted and 2672 people (1009 women) have been oriented.
- 6 Technology Demonstration Centers (TDCs), 2 TDCs each in the three municipalities, are being constructed. A total of 859 women were oriented about the constructions on the site.
- Risk Sensitive Land Use Plan (RSLUP) and Building Bye-Laws of Chautara municipality have been prepared and endorsed by the municipal council.
- 271 masons including 12 women from Sindhupalchowk and Kavre districts were trained. In addition, 30 trainers (Engineers/Sub-engineers) including 2 women were trained for supporting safer reconstruction in EQ affected districts. In addition, 30 engineers include one woman trained on advanced SAAP software for NBC compliance monitoring.
- Preparation of Local Disaster Risk Management Plans (LDRMP) of four VDCs: Irkhu, Bhotsepa, Sipapokhare, Badegaun and 2 wards of Chautara municipality (earlier Kuvinde VDC) have been initiated.

Local people gathered for project interaction, Panchkhal Municipality, Kavre

ToT trainees in practical sessions for safer construction

Progress on "Resilient Communities through Building Back Better" Project – ECHO funded

Under this component, CDRMP continued its support to the government of Nepal, especially the National Reconstruction Authority (NRA) for safer reconstruction in Sindhupalchowk and Dolakha, the two of most-hard hit districts by EQ 2015, with funding support from ECHO. The project was commenced in the ten VDCs in the two districts (5 VDCs: Sipapokhare, Bhotsipa, Badegaun, Irkhu and Kubhinde of Sindhupalchowk and 5 VDCs: Fasku, Katakuti, Lakuridanda, Magapauwa and Boch of Dolakha).

The project team was hired and deployed at Kathmandu and in the two districts. Two local NGOs, one each in the two districts, were contracted to effectively mobilize the junior staff team (comprising Junior Engineers, Awaas Nirman Sathi, Community Mobilizers) for supporting a team of three project officers (one Project Officer, one District Engineer and one Senior Social Worker) deployed by the project. Project Coordinator has been based in CDRMP's Kathmandu Office to look after the project implementation at field level as well as keeping close coordination with central level stakeholders. Some of major achievements of the project in 2016 are briefly mentioned below:

Figure 1 District level Inception, Charikot, Dolakha

VDC level consultation, Katakuti, Dolakha

Inception Meetings: Inception meetings were organized in both the districts and district stakeholders were briefed about the project's working approach, targets groups, expected outputs and coordination mechanism. The inception workshops concluded to move with the implementation in coordination with all the stakeholders. At VDC level, inception consultations were organized. A total of 647 local people (194 women) were oriented about the project through VDC level meetings and 4,277 people (1498 women, 549 Dalits, 2139 Janajatis) were oriented about the project activities and approach through ward level consultations in all the 10 VDCs in two districts.

Reconstruction Action Plan (RAP): Reconstruction Action Plan has been envisaged by the project to guide the VDCs in moving forward for effective reconstruction with the principle of Building Back Better. Availability of reconstruction materials, trained masons, other resources and major issues are the key attributes a RAP should have. In 2016, consultations at ward and VDC level were initiated. VDC secretaries of the project VDCs and district stakeholders were consulted to share importance of RAP and to gather feedback for moving forward in a participatory way.

Technology Demonstration Houses (TDH): One of the main objectives of this project is to provide EQ affected people locally relevant and appropriate safe house technology. For this purpose, project has initiated construction of 40 TDHs (4 each in the 10 VDCs) which serve as housing models to local people to adopt in reconstruction of their houses. In order to ensure that the TDHs are well owned locally and are available for local people to learn about the technology for a longer period, the project adopted an approach to select most vulnerable families in the VDC who are not able to build their houses through only government's NRs. 3,00,000 grant. These house-owners were selected in very participatory manner involving local people including members of ward citizen forums and other local institutions. In the two districts, 40 House-owners (23 women, 21 Janajatis, 8 Dalits and 13 Disabled) have been selected for construction of their houses under close support and facilitation of the project in order to demonstrate them as Technology Demonstration Houses (TDHs) for others in the villages. Out of 450 targetted, 360 local masons have been identified to be trained on TDH construction process through On-the-Job training. In addition, 51 local working masons were trained on building safer houses of GI wire containment through two events, one each in Sindhupalchowk and Dolakha, of the training entitled ("Random Rubble Masonry with GI

VDC level consultation for Reconstruction Action Plan, Irkhu, Sindhupalchowk

Trainees of GI Wire Containment training, Katakuti, Dolakha

wire containment reinforcement system") to facilitate the reconstruction process in the project VDCs.

Socio-technical Facilitation to House Owners with awareness raising activities: Raising awareness among the house-owners i.e. local people on different aspects of EQ safe housing models is major among its

objectives. Awaas Nirman Saathi (ANS) who have been trained by the project have been mobilized to visit door-to-door and orient people on safer houses constructions. Community Mobilizers (CMs) have also been mobilized to encourage house-owners from poor and vulnerable groups (Dalits, Janajatis, people with disabilities) in different consultations organized by the project to address their needs and thoughts in the reconstructions. Another approach for raising awareness among the local people for adopting safer housing models, Mobile Technological Clinics (MTCs) have been organized at different locations in project VDCs. MTC involves different Information, Education and Communication (IEC) materials including audio-visuals embedded in a mobile van (jeep). A technical staff (Civil Engineer /Architect) leads the campaigns by showing videos, distributing printed materials and inspiring communities on safer reconstruction followed by responses to the queries and concerns of the local people. Between Jan-Dec 2016, total of 2477 people (37% women) were oriented through 44 events of MTC campaigns in project VDCs. These events include few events organized by UNDP/CDRMP before the project commenced.

MTC Campaign, Lankuridanda, Dolakha

Progress on promoting exchange of learning and experiences on safer building construction under "Community Based Disaster Management in Asia- CBDMA-II"

Furthering support to safer construction, some initiatives were initiated in 2016 under Community Based Disaster Management in Asia (CBDMA – phase II), a project being led by UNDP China with funding support from DFID/UK Aid and being implemented in China, Nepal and Bangladesh. Following activities were initiated under CBDMA II in 2016:

- Electronic Building Permit System (e-BPS) learning documentation has been completed, which is based on the intervention and experience with KMC, LSMC and Kirtipur Municipality.
- Learning on the process of Risk Sensitive Land Use Plan development and implementation by Kathmandu Valley Development Authority/MoUD has been documented.
- Building Inventory Creation Technology and Demonstration (Rapid Vulnerability Assessment of Buildings in Kathmandu valley) is being piloted in ward number 29 of Kathmandu Metropolitan City. A mobile based app has been developed and is in the process of testing.
- Mobile based App for NBC compliance monitoring has been developed and is being piloted in the three municipalities: Melamchi and Chautara of Sindhupalchowk and Panchkhal of Kavre districts under support from UNDP/CDRMP.

Progress on Output - Vulnerable populations have increased knowledge about disaster risk management and capacity for climate change adaptation and mitigation of risks (Output 7.3).

This component mainly deals with enhancing capabilities of local communities, who are vulnerable to climate and disaster risks, for their increased resilience to these risks. As mentioned below, the first part deals with the progress on "ICRM Initiatives" implemented under funding from UNDP Bureau of Crisis Prevention and Recovery (BCPR) and the second part deals with the progress on "Fast Tracking Millennium

Development Goals and Safeguarding Development Gains" under Millennium Development Goal Trust Fund Initiative (MDGTFI) of the Republic of Korea/KOICA and UNDP (ROK-UNDP).

The key progress made in 2016 under Community based Climate Risk Management initiatives in Dolakha and Surkhet (under ICRMP, Sweden-UNDP) are as mentioned below:

- Consultations with DHM were held to provide technical support for improved database administration and Geospatial data analysis. A high resolution Digital Elevation Model (DEM) of Riu-Khola Sub watershed, Chitwan extracted from the stereo pair images as well as the DEM of Rolwaling valley, Dolakha extracted from the secondary data have been prepared.
- The Agro-met Automatic Station along with Display system has been installed at Baddichaur, Kunathari VDC-4, Surkhet.
- A community based Climate risk management and livelihood promotion interventions especially focusing on the thematic sectors as Livelihood Promotion, Bioengineering and Natural Resource Management have been implemented in three sub-watersheds namely Khare-Suri khola and Sorungkhola sub-watersheds in Dolakha district and Sot-khola sub-watershed in Surkhet district. Key progresses include:

- Local Disaster Risk Management Committees and Community Based Disaster Risk Management Committees (LDRMCs and CBDRMCs) have been supported with off-season vegetable farming and goat farming, Construction of tanks for irrigation and drinking water; Construction of cardamom nursery, conservation ponds, plastic tunnels, dry cemented canal for flash flood control and gabion structures have been completed in Dolakha collectively benefitting about 3588 people (1836 women & 1752 men) from 1516 HHs of Babare, Khopachangu, Lapilang, lamidanda, kalinchok VDCs of Sorungkhola subwatershed and Khare, Suri, Jhyaku, Chankhu, Marbu VDCs of Kharesuri khola subwatershed in Dolakha.
- 1,713 persons (CBDRMCs/LDRMCs/VDC Secretaries) including 914 women have been trained on different aspects: livelihood, skills, SAR, First Aid, DRR/CCA, etc.
- 15 ECO-DRR clubs have been supported/oriented involving 160 students of 15 schools in the ten VDCs; ECA guidelines have been prepared for all the clubs.
- 5 new LDRMPs (Khare, Suri, Jhyaku, Chankhu, Marbu VDCs) have been prepared and 5 LDRMPs (Babare, Khopachangu, Lapilang, lamidanda, kalinchok VDCs) have been reviewed/updated benefitting entire 22,725 (12425 female, 505 dalits and 13280 janajati) population.

A woman farmer in her vegetable farm, Dolakha

- Similarly, in Surkhet, the construction of drinking water reservoir tanks and collection chamber, filter tank and rainwater harvesting ponds, plastic tunnels, Construction of irrigation canals and fitting of pipes, installation of Bio-gas plants, bamboo plantation, gabion structures and establishment of school garden have collectively benefitted about 7,905 people (4028 women and 3,877 men) from 1,155 HHs of Kunathari, Lekhgaun and Gadhi VDCs of Sot khola sub-watershed in Surkhet.
- The results and achievements of the project activities implemented in the two districts were shared with local, district and national stakeholders by organizing a sharing workshop on 11 - 12 September 2016 in Kathmandu and the workshop was participated by the representatives from central GoN as MoFALD, DSCWM, DHM, DWIDM, DoA and district GoN as VDC secretaries of Surkhet and Dolakha, and DADO Surkhet.
- A CRM Strategy to serve as a guidance for integrating CCA and DRR approaches into programmes and projects supported by UN agencies in Nepal has been developed which is under finalization process.
- A Training Module on Integrated Climate Risk Management Approach in Structural and Non-Structural Measures for Department of Water Induced Disaster Management (DWIDM) officials has been prepared based on the training need assessment.

Tanks constructed with project support, Lekhgaun Drinking Water Scheme, Lekhgaun, Surkhet

The key progress made in 2016 under MDGTFI (with funding support from RoK-UNDP) project in Chitwan and Sindhupalchowk are mentioned below:

- The activities under this sub-component also includes both, national level and community level. At community level, activities were carried out through 6 CBOs in Chitwan and 10 CBOs in Sindhupalchowk district under MCG modality.
- Some of main activities carried out as central level are presented with below points:
 - Completion of research activities by 7 students, in funding support of MDGTFI, linking climate risks in agriculture sector in collaboration with the Institute of Agriculture and Animal Science (IAAS), Kirtipur.
 - Agri Apps with the collaboration of MoAD/ DoA/ DADO was launched in Sindhupalchowk district where 80 participated the inauguration ceremony and 33 individuals provided with master ToT on the Agri App application.
 - DEOCs of Sindhupalchowk and Chitwan were supported after the consultations were held with District Administration Offices (DAOs) of Sindhupalchowk and Chitwan to identify the need for strengthening the respective District Emergency Operation Centre (DEOCs) towards making them model DEOCs.
 - In Sindhupalchowk district, construction of multipurpose nursery with the collaboration of DFO Sindhupalchowk was done. Further, Operational Plan (OP) and Constitutions of 17 Community Forest User Groups (CFUGs) of Sindhu khola sub-watershed, Sindhupalchowk were prepared/ revised in coordination with the DFO. An orientation workshop involving CFUG members, District Forest Office and other stakeholders was organized at the beginning and sharing was also conducted at the end.
 - Micro-capital Grant (MCG) result sharing workshop organized in Sindhupalchowk and Chitwan to share the key achievement and lessons learnt. 16 CBOs developed their capacity to implement project interventions related to integrated climate risk management and livelihood promotion. A better linkage with local and district level agencies was found to be developed. As per the CBOs,

presentation, their intuitional, capacity on decision making, planning and implementation and documentation was improved.

- Compilation of best practices: the MCG project completion reports, reflection photo stories and video will be knowledge management tool for MDGTFI.
- In Riu-khola sub-watershed Maadi, Chitwan, mainly three types of activities were accomplished, they are: livelihood promotion related, community infrastructure/bio-engineering works and capacity building. The key progress includes:
 - Excavation of 13 ponds was completed and support with fishing equipment, fingerlings etc. was also provided to the farmers. 21 farmers started mushroom cultivation through the project support. One market information and collection centre was constructed in Maadi for easing the marketing of the agri-products of the project beneficiaries. Another construction for community seed bank was also started in the first quarter.
 - Furthermore, home gardening with drip irrigation 40 HHs, IPM farmers' school 1, support to rehabilitation of small irrigation 5 benefitting 150 HHs, support construction of plastic ponds 4 benefitting 100 HHs, pump-sets for irrigation 41 HHs was accomplished.
 - About 1200 meters of flood control mitigation structures such as check-dam construction using gabion boxes was completed at several vulnerable sites of Riu-Khola, Bandarmude Khola, Magaoi Khola, about 2 Km trench was opened to divert the Riu-khola in Rauteni as river training,
 - 14 Km forest area fencing with mesh-wire to prevent human & wildlife conflicts were also completed.
 - More than 2,000 bamboo clumps were transplanted as bioengineering works at different locations of above structures.
 - In order to promote the agricultural marketing, an agricultural collection and information center is constructed with 7 stalls, one live fish marketing, two roomed-building, 1 hand-pump for drinking water and two room toilets.
 - A workshop on promotion of agricultural marketing and role of different stakeholders was organized in Maadi, Chitwan jointly by DADO and UNDP and in technical support of Directorate of Agribusiness Promotion and Market Development (DABPMD). A market operation committee is formed as per the guidelines of MoAD, Directorate of Agribusiness Promotion and Market Development.
 - Construction of community seed bank of 34 x 18 x 12 cubic feet with a capacity of about 60-70 MT seed storage has been completed. In addition, machines for seed cleaning, grading, treating and generator for operation of those machines has been supported. The community seed bank is construction jointly by UNDP, DADO and Community. It's operation will be managed by Kisan Jagriti Beej Briddhi Samuh, Barua, Maadi, Chitwan. In addition to that 50 sets of metal bins were distributed to the poor and vulnerable farmers to store seed and grains at household level.

Farmers harvesting fish from the ponds constructed with support from the project

Bio-engineering structures, Chandrapuri, Maadi, Chitwan

- For raising household income, different activities like goat keeping, swine rearing and laying poultry birds raising at HHs level was promoted to 200 HHs. Cattle shed improvement 20 HHs and plantation of fodder were done benefiting 70 HHs.
- Seed Production support by foundation seeds 3 MT of wheat (Gautam variety) and 4 MT of paddy (Radha-4 and Sabitri) seeds to 100 HHs was provided. In addition, 10 MT of improved seeds of Sukha 3 & 5 for dry area and Sabha Sab for flooded area was support to 2,000 farmers in Maadi.
- A total of 150 biogas plants were installed in collaboration with Buffer zone committee and Biogas Company.
- In order to enhance the capacity of the community based organizations, one training on institutional development and documentation and 1 exposure visit was organized in which about 100 individuals and local actors benefitted.
- For community based early warning system in Maadi, Chitwan, 5 Automatic hydrological and meteorological stations were established at different locations: Bankatta, Chharchare, Kalyanpur, Govindabasti and Thori. An operation unit and lighting station was set up at Narayani Basin Office, DHM. To orient the relevant local stakeholders EWS Action team, a training manual was also drafted and the orientation training was planned for second quarter.

Figure 2 EWS Station, Riu-khola, Chitwan

- Major accomplishments in Sindhupalchowk through the ten CBOs are briefly mentioned below:
 - The project activities were carried out in the 3 VDCs Haibung, Bhotechaur and Thakani and four wards of Melamchi municipality (earlier Sindhukot and Bansbari VDCs).
 - The main activities carried out were from the three thematic areas and they are restoration of community small infrastructures, livelihood improvement activities and bioengineering measures.
 - In the above 3 VDCs and Melamchi municipality, altogether over 4,000 HHs have been benefitted through one or more activities under the project interventions.
 - About 110 schemes of community small infrastructures were constructed/repared.
 - Bio-engineering schemes (drinking water supply schemes, community buildings, wire-mesh fence, irrigation canals, landslide protection, gabion walls, water source protection) were constructed
 - Income generating activities (goat raising, swine raising, off-season vegetable farming, bee-keeping, poultry, floriculture). The community members were oriented on these activities as well.

Plastic Pond, Giranchaur, Sindhupalchowk

Progress on Output - National preparedness and emergency systems are able to effectively prepare for and respond to hazard related disaster. (Output 7.4).

CDO of Rasuwa Mr. Krishna Prasad Adhikari activating DEOC, April 2016, Rasuwa

As per the consensus between MoHA and MoFALD, four Municipal Emergency Operation Centres (MEOCs) were converted into DEOCs, thus DEOC was established in four new districts: Gorkha, Rasuwa, Nuwakot and Solukhumbu. Installation of VHF Radio Base Stations in a total of 34 EOCs including all five REOCs and 29 DEOCs covering all five development regions. Likewise, the long pending Workshop on Disaster Preparedness and Response for the disaster focal persons at DAO, the ACDOs and the assigned officials, and also from Regional Administration Offices (RAO) were conducted successfully in this period where a total of 40 EOCs participated. Strengthening support to the EOCs, as an immediate intervention, recommended by the EOC Network Evaluation, has also been provided to EOCs from across the country. The strengthening support, installation of VHF Radio

Base Stations and conduction of the workshop of DM focal persons from each district having EOCs comprised efforts in further institutionalizing the operational performance of EOCs in meeting its functional benchmark. Four events of DIMS training were organized for far-western, mid-western, western, central and eastern development regions' EOCs. 113 persons including 5 women from DEOCs, REOC, NEOC and five NRCS were oriented on DIMS including integration of SAHANA into the DRR portal. The Early Recovery framework was reviewed by MOFALD and their concurrence obtained for finalization and printing. It is also expected to be translated into Nepali.

As part of strengthening the EOCs, three staff, one each at NEOC, DEOC Sindhupalchowk and Surkhet have been deployed to provide technical support to the EOCs for improved disaster information management, coordination with local stakeholders.

Participants and MoHA-UNDP team in EOC Focal Persons Orientation, Nepalganj

6. BUDGET AND EXPENDITURE

The approved annual budget for 2016 was US\$ 2,856,904.00. The total expenditure of 2016 is US\$ 2,726,277.00 i.e. 95.42% of annual budget. As shown in the table below expenditures for most of the outputs, except output 6, CBDMA-II and ECHO are above 90%. Project activities for both CBDMA II and ECHO project started lately then expected which resulted in comparatively lesser expenditures than planned.

Table 4: Output wise annual budget and corresponding expenditures

Amount in US\$

Output	Annual Budget	Annual Expenditure through project	Annual Expenditure through UNDP	Total Expenditure	Budget Utilization%
Activity 1	619,509	631,143.79		631,143.79	102%
Activity 2	133,459	127,819.51		127,819.51	96%
Activity 3	191,765	183,192.28		183,192.28	96%
Activity 5	150,703	141,588.97		141,588.97	94%
Activity 6					
Activity 7	31,001	29,702.99		29,702.99	96%
Activity 8	406,891	426,014.69		426,014.69	105%
KOICA	932,300	928,446.24		928,446.24	100%
CBDMA II	193,364	120,037.55		120,037.55	62%
ECHO	197,912	138,330.98		138,330.98	70%
Total	2,856,904	2,726,277.00	0	2,726,277.00	95.42%

The table 5 shows the details of the budget and yearly expenditures of CDRMP for the period of 2011 to 2016. It also shows the funds received from different donors for the different durations. The activities under ECHO funding and UNISDR funding were completed in 2013 and that under World Bank were completed in 2015. The project on seismic resilience under DFID funding also ended in the first quarter of 2016. However, two projects i.e. CBDMA II with DFID funding through UNDP China and Resilient communities through Building Back Better funded by ECHO started in 2016. Similarly, Government of Japan funded "Support to three municipalities for National Building Codes Implementation" also started in January 2016.

Table 5: Sources of funds Budget and Utilization of the project period

Amount in US\$

Source of Fund	Funding period (Start - End Date)	Total Project Budget	Expenditure up to 2015	Expenditure in 2016	Total expenditure till 2016	Total Budget utilization %	Budget Balance US\$
UNDP/TRAC	2011-2016	4,864,785	4,016,454	869,713	4,886,167	100%	-21382
CPR TRUST	2011-2016	255,516	147,484	108,429	255,913	100%	-397
BCPR	2011-2016	2,951,878	2,817,867	134,089	2,951,956	100%	-78
DFID	2011-2016	8,463,522	8,360,005	103,511	8,463,518	100%	6
Baidu	2016-2017	99,113		87,519	87,519	88%	11,594
ECHO	2011-2013	998,789	998,789		998,789	100%	0
UNISDR	2011-2013	29,853	29,853		29,853	100%	0
World Bank	2013-2015	627,522	623,874		623,874	89%	3,648
KOICA	2014-2016	1,972,777	1,040,477	928,446	1,968,923	100%	3,854
GoJ	2016-2017	318,654		250,266	250,266	79%	68,338
CBDMA II	2016-2017	540,568		120,037	120,037	22%	420,531
ECHO	2016-2017	707,932		124,266	124,266	18%	583,666
Total		21,830,909	18,034,803	2,726,277	20,761,079	95.42%	1,069,830

CDRMP has been following the recommendations given by the Annual Financial Audit 2012 for effective and efficient utilization of the project funds. In addition, CDRMP received guidance and supervision from UNDP country office for preparation of annual work plan and budget, tracking expenditures and procurement process. The project admin and finance staff visited some of the MCG grantees as well as service providers on sample basis to ensure procurement and expenditures are done as per the rules and regulations. In addition, financial review of the project for 2015 was also done in 2016 and the recommendations of the review have been implemented in the implementation.

Project expenditures on Monitoring and Evaluation (M&E) in 2016: As elaborated in table 6, around 4.38% of the total expenditures of the project in 2016 has been spent on quality assurance of the project activities. Two events of orientation to MCG grantees were organized to ensure that the grantees follow administrative and financial procedures in a transparent way. Staff from center including UNDP country office and field level offices have visited regularly for effective implementation of the project activities. A review was also carried out by outsourcing national independent consulting firm to assess the results of MDGTFI/UNDP-RoK funded project implemented in Sindhupalchowk and Chitwan districts.

Table 6: M&E Expenditure in 2016

S. N.	M & E Items	Expenditures 2016 (US\$)
1.	Monitoring related activities/events (workshops, trainings etc.)	30,000.00
2.	Project Reviews/Evaluations	9,500.00
3.	Travel (National)	45,000.00
4.	Staff salaries	35000.00
	Total M&E Expenditures in 2016	119,500.00
	Total expenditures of CDRMP in 2016	2,726,277.00
	M&E expenditures in % of total	4.38

7. CROSS CUTTING ISSUES

7.1 Targeting and voice/Participation of Target groups

CDRMP supports the Government of Nepal for overall improvement in disaster risk management system in the country. It works from community level to policy/strategy level. Thus, it has two categories of beneficiaries: at-risk communities from disaster and climate risks and Government institutions, officials and others working in D/CRM sectors. In 2016, some additional districts were added to address the post EQ 2015 context. District Emergency Operation Centers (DEOCs) were added in Gorkha, Nuwakot, Rasuwa and Solukhumbu. In terms of community level interventions, three municipalities (Chautara and Melamchi of Sindhupalchowk and Panchkhal of Kavre district) and 10 VDCs (Fasku, Katakutti, Lankuridanda, Bocha and Magapauwa in Dolakha district and Sipapokhari, Irkhu, Kubhinde, Bhotsipa and Badagaun in Sindhupalchowk) were added in 2016 exclusively to address post EQ 2015 contexts by facilitating safer reconstruction of houses. The project continued its community level activities in 3 VDCs (Kunathari, Gadhi and Lekhgaun) of Surkhet, Maadi municipality of Chitwan, 4 VDCs/municipality in (Haibung, Bhotechaur, Thakani, Sindhukot and Bansbari, later two being now 4 wards of Maadi municipality) and 10 VDCs (Marbu, Chankhu, Jhyaku, Khare, Suri, Khopachagu, Babare, Lapilang, Kalinchowk and Lamedanda) of Surkhet. District and VDCs have been selected in coordination with the concerned government agencies to address

the needs of local people. Community Based Organisations(CBOs) that project has been working with consist of 36% women, 10% Dalit and 43% Janajatis respectively. In community level capacity building events, about 45% of participants have been women.

7.2 Gender Equality, Women's Empowerment, and Social Inclusion

- GESI has been integrated in the annual work plan (AWP) 2016 with targets and indicators wherever applicable. Different studies and reviews (e.g. Study on Gorkha Earthquake 2015: Experience and Learning, Result Review of MDGTFI project) carried out under the project have been reviewed with GESI perspectives and comments/inputs have been provided by the project team as well as by the concerned Government officials.
- Follow up consultations with the Ministry of Home Affairs (MoHA), Department of Women and Children were done to activate GESI Action Task Force formed in 2015 before the EQ and the action group has been active now. Three meetings were held and different aspects of GESI mainstreaming were discussed. The meetings identified a need to orient GESI focal persons/officials and DRR focal persons jointly to enhance understanding of mainstreaming GESI in DRR planning, implementation and project cycle.
- 45 GoN officials (GESI Focal Persons and DRR Focal Persons) were oriented on integration of GESI in DRR/CCA planning and implementation through two days' workshop.
- Contributing 16 days (25 Nov-10 Dec 2016) campaign against Gender based violence, CDRMP organized six events, five in Dolakha and one in Sindhupalchowk, and these events were integrated in its ECHO funded "Resilience Communities through Building Back Better" project. Total of 369 community members (139 women, 37%) participated. Community members were oriented on the background and importance of the campaign, its theme (slogan) for 2016 and roles of local people for elimination of different kind of gender based violence. Speeches and presentations were followed by open discussions where community members put forward their views and commitment to stop such violence. The discussions concluded that both men and women should work together against the gender based violence.

7.3 Scaling up

CDRMP has been working in close coordination with the line ministries and concerned departments of the Government of Nepal to ensure that the interventions could be continued even after the completion of the project activities. The support by CDRMP in different legal, policy and normative documents have been owned by the government and were being implemented by the concerned ministries, departments including National Planning Commission. The partnership completed and/or ongoing with the Administrative Staff College, Local Development Training Academy and TU Central Department of Environmental Science, Council for Technical Education and Vocational Training Center and other institutions have been envisaged to build their capacities towards delivering the trainings and researches on DRM even after the completion of CDRMP. The results are apparent and consultation with NASC and LDTA has revealed that these institutions have planned to deliver the D/CRM trainings from GoN fund. Similarly, the capacities building support provided to TU-CDES are being utilized. Likely, the intervention at the community level has been done in close coordination and consultation with the concerned ministries and departments at the central level and with line agencies of district level including DDC and VDC and other CBOs at the local level. The coordination and consultation with these institutions have been done to ensure that the intervention will go beyond the project for benefiting the local vulnerable communities in a sustainable way.

7.4 National Capacity Development

In 2016, CDRMP continued to build capacities of national institutions. The programme supported the Ministry of Home Affairs through conducting study on "Gorkha Earthquake: Response and Learning", orienting EOC network staff including Assistant CDOs for improved functioning of EOCs, strengthening support to over 25 EOCs. Technical support was provided to National Planning Commission through a study "Risk Informed development planning" with an aim to integrate D/CRM issues in the 14th periodic plan. Around 125 officials from regional and national level were oriented on integration of D/CRM into national and local level planning and implementation. NPC was provided with technical support for development of mainstreaming guideline for disaster risk reduction and climate change adaptation. Technical support was provided to Kirtipur municipality and Lalitpur Sub Metropolitan City, which resulted into formalization of e-BPS by both the institutions towards improved governance in safer construction practices. The programme supported the Department of Soil Conservation and Watershed Management (DSCWM) for development of IT based watershed prioritization which helps the department and district agencies to prioritize the watersheds/sub-watersheds for resource allocation and interventions. Support to the Department of Hydrology and Meteorology (DHM) was continued in 2016 which resulted in establishment of Community based Early Warning System in Maadi, Chitwan and Surkhet. Besides, other support such as Digital Elevation Model (DEM) development for Maadi and Tsho Rolpa, 3 days weather forecast and website upgrade were also provided to DHM. Thus, capacities of different ministries and departments have been enhanced for improved DRM planning and implementation.

7.5 Sustainability

The project continued its effort to implement its activities with prime objective to institutionalize the key achievements at community, institutional and policy level. Local committees namely Community based Disaster Risk Management Committees and Local Disaster Risk Management Committees have been formed as per prevailing policy framework of the GoN and have been registered in the respective VDCs. These committees have been capacitated with different technical and social trainings and have owned their plan of actions. Support provided to MoHA and other ministries and NPC belonged to the national legal and policy initiatives which have inherently been owned by the GoN. EOC network established and supported in 54 districts across the country has already been taken up under MoHA's NEOC functions. The programme's initiatives to facilitate NBC implementation in Kathmandu Valley have been well taken up by the municipalities and Kathmandu Valley Development Authority. Electronic building permit system (e-BPS) has been formally operationalized by Kirtipur municipality and Lalitpur Sub Metropolitan city in 2016, Kathmandu Metropolitan City had formalized in 2015. Ministry of Urban Development has approved the Retrofitting guidelines and RSLUP of Kathmandu Valley, project's housing designs have been included in the DUDBC's design catalogues. Support for safer reconstruction has been done to the municipalities and municipalities are progressing towards assurance of continuity of the interventions.

7.6 South-South and Triangular Cooperation

A team of seven persons (one each from MoHA/NEOC, MoFALD, MoUD, TU-CDES, and NEA and two from UNDP) visited China to attend a learning workshop under "Sharing and Learning on Community Based Disaster Management in Asia (CBDMA Asia)" project of China. The workshop aimed to enhance experience sharing of Phase I and explore the essential challenges, requirements and opportunities of multi-stakeholder partnership in future. Representatives from the Government, UNDP, University, professional institutions of Nepal, China and Bangladesh and DFID UK attended the workshop. The participants from the three countries shared their learning and experiences on D/CRM. The participants from Nepal shared their experiences and learning of April 25 Earthquake and response-recovery-reconstruction effort that had been taken by the government and other actors. The field visit to 2008 earthquake hit areas provided extended opportunities

to learn on different aspects of recovery, reconstruction and relocation of affected families. Learnings also provided some insights about the participation of the community people on post disaster reconstruction process that was also embedded with mitigation and preparedness initiatives for DRM. The participants of the workshop are officials, researchers and experts who are involved in the field of D/CRM and working closely with the government. Thus, the learning from the workshop including field visits would be beneficial in upcoming recovery and reconstruction planning and implementation in Nepal.

UNDP China with support from DFID has been supporting Nepal for improved D/CRM planning and implementation through exchange of knowledge and experiences with China, Bangladesh and UK under Community Based Disaster Management in Asia Phase II. Two teams of delegates visited China in 2016 to share and learn different aspects of CBDM. First team of 7 members (MoHA, UNDP and CBDRMCs) participated in experience sharing workshop in Chengdu from 28-29 June. Another team of 8 members (MoHA, UNDP, UNRCO, NEA, Nepal Army, OMPCM, Redcross) visited in October 2016. Similarly, a team of 7 members from National Disaster Reduction Center of China (NDRCC) also visited Nepal in December 2016. In addition, mid-term review team of two members also visited Nepal in November 2016. These exchange visits have mutually benefitted the three countries towards improved emergency preparedness, response and recovery learning. More specifically, learning and experience gained from these visits have been utilized in planning and implementation of activities in 2016 and forward planning of 2017 as well.

7.7 Partnerships

UNDP has continued partnerships with different donor agencies and has mobilized resources for CDRMP activities implementation in 2016. Besides its own resources (TRAC, CPR TTF), DFID, GoJ, ECHO, RoK-UNDP, Baidu Foundation, CDBMA/DFID were the principal partners that provided financial resources for project implementation. ECHO funding was new one mobilized in 2016 for supporting National Reconstruction Authority in safer reconstructions in 10 VDCs of Sindhupalchowk and Dolakha.

Project was implemented under overall guidance and oversight of Project Executive Board (involving MoHA, MoFALD, MoUD, NPC, MoF, MoAD as board members). Project executed its annual plan of activities in close consultation and collaboration with concerned departments, district level agencies, municipalities for increased efficiency and effectiveness. Partnership with CTEVT for building capacities of masons and engineers in safer construction/reconstructions, that with TU-CDES and NASC for capacity building of officials and practitioners, that with Nepal Engineers Association, Institute of Engineering and other national NGOs were done for better implementation of the project. The partnerships with Institute of Animal and Agriculture Science (IAAS) resulted into researches related to climate risks management and that with TU-MERU resulted into study on landslide hazards in two of the EQ 2015 affected districts..

In addition, interagencies collaborations within UN system was also followed. Project has discussed collaboration with UN Habitat for reconstruction project implementation, wider consultations were undertaken with UN agencies: UN Women, UNFPA, UNICEF, FAO, UNRCO for national level strategy formulation, conducting strategies and strengthening institutional capacities at different level.

These partnerships have fostered the capacities of government institutions towards delivering technical services on D/CRM in long run.

7.8 Promotion of Civic Engagement

Civic engagement has been promoted through project implementation at different levels. Local communities and groups who are vulnerable to climate and disaster risks have been involved in project planning, implementation and monitoring through the projects. Local NGOs and CBOs were selected for delivering project activities through contractual services as well as through Micro-Capital Grants (MCGs). Women Networks, Forest User Groups, Ward Citizen Forums and other CBOs were also encouraged in project implementation. Local representatives from the political parties, representatives from communities' groups/networks were also consulted at different stages of project implementation. National NGOs and Consulting Firms as well as international service providers were also involved in project implementation.

7.9 Expanding opportunities for youth

Youth have also involved and benefited through project activities. ECO-DRR clubs have been formed in Dolakha, Sindhupalchowk, Chitwan and Surkhet districts and students and teachers are capacitated through different DRR-CCA sensitization activities. In 2016, around 160 students from 15 schools were oriented on disaster risk reduction and environmental conservation activities. Students, children, youth have been encouraged to participate in awareness raising activities on safer reconstruction in EQ affected districts through Mobile Van Technological Clinics (MTC) and house-to-house campaigns by project's Aawas Nirman Saathi (trained masons). Local youths have also been trained as "masons" from the EQ affected districts to contribute for safer reconstructions towards building resilient communities.

7.10 Innovation

Several innovative works were carried out in 2016. Technological research and demonstration for supporting reconstruction in the EQ affected districts were carried out through four different initiatives namely (i) construction of prototype for GI contained stone masonry building, (ii) construction of prototype for Compressed Stabilized Earthen Block (CSEB), (iii) upcycled Debris Block preparation and (iv) re-clustering of settlement. The fourth one is for developing re-clustering approach and process manual to support the Government of Nepal. The concept has been piloted in Majhigaun, Melamchi area of Sindhupalchowk district. Furthermore, a mobile based App has also been piloted to track reconstruction in EQ affected district and is being revised for approval and scale up. Development of a tool "Rapid Vulnerability Assessment of buildings" has also been initiated in Kathmandu Valley to facilitate assessment of existing buildings and future planning toward EQ safety in the valley.

7.11 Knowledge Management and Products

CDRMP's results and achievements have been disseminated with a wider level audiences through different ways. Project progress and achievements have been shared in different level of workshops and sharing events. Moreover, success stories, event news, photo stories and others have been produced and disseminated including posting in UNDP website, Facebook, twitter, etc.

A study was carried out on "Gorkha Earthquake 2015: Response and Learning" and book has been printed to share with wider audiences. Similarly, two episodes of Video-Documentary (Gorkha Earthquake:

Response and Learning Vol I & II) have been produced to share what went well and what didn't during response to the EQ 2015.

A video documentary, a photo story and 10 short videos for You Tube have also been produced for dissemination of the achievements of the project - Fast Tracking MDGs and Safeguarding Development Gains funded by the Republic of Korea. Two books, one each for Maadi, Chitwan and Sindhukhola Chitwan have been printed out and being distributed to reflect different activities accomplished under MCG by the CBOs/CBDRMCs.

Different publications and IEC materials have been produced on safer construction practices. A book on "Urban Growth Trend and Multi-Hazards in Kathmandu Valley" has been printed and the book was launched on 28 Nov 2016 by Honorable Arjun Narsingh KC, the Minister for Urban Development. Mobile Technology Clinics (Mobile Van Initiatives) have been organized in over 100 VDCs of Gorkha, Sindhupalchowk and Dolakha districts. For such clinics different IEC materials on safer construction have been produced and being distributed to local people, CBOs, civil society organizations and practitioners.

Project progress and different IEC materials, publications have been uploaded in the project website: www.undp.np/cdrmp as well.

Event news on project interventions, events are disseminated through UNDP websites, face book, twitter etc. Some of the have been given below:

1. Launch of eBPS by Lalitpur Sub Metropolitan City

<http://kathmandupost.ekantipur.com/news/2016-12-17/lalitpur-launching-e-mps-starting-today.html>

2. Dissemination of Dissemination of Krish Apps for farmers to access information on climate resilient cropping techniques, etc.

5. MTOT for Engineers for Safer Construction practices

http://www.np.undp.org/content/nepal/en/home/operations/projects/environment_and_energy/cdrmp/news/

7.12 Monitoring and Evaluation

Monitoring of the project activities is being done on regular basis and it involves communities, donor representatives as well as stakeholders. Monitoring was carried out on regular and periodic basis by CDRMP staff and staff from UNDP Country Office. During the monitoring visit, government staff and representatives

from DDC, VDC and CBOs had participated and feedback from the monitoring were utilized in the project implementation.

In 2016, CDRMP carried out review of results of the MDGTFI project implemented in Chitwan and Sindhupalchowk districts. In addition, CDRMP implemented some of applicable recommendations received from the two interventions: (i) Evaluation of the partnership with Nepal Administrative Staff College (NASC), Local Development Training Academy (LDTA) and Tribhuvan University Central Department of Environmental Science (TU-CDES) for assessing the effectiveness of capacity building on D/CRM and mainstreaming D/CRM into academia, and (ii) Evaluation of Emergency Operation Centres (EOCs) network in 53 districts across the country carried out in 2015.

8. LESSONS LEARNED

The below points are some of the key lesson that project realized during implementation of activities in 2016:

- Awareness raising on earthquake and safe construction practices in EQ affected districts, Gorkha, Sindhupalchowk and Dolakha have been effective to motivate local people for adoption of safe construction practices for reconstruction. It has also created enabled environment for project implementation.
- Implementation of project activities under MCG through LDRMCs/CBDRMCs/Women Networks/Forest User Groups has been a good learning in terms of their capacities enhancement and for sustainability of the project interventions. They were contracted to implement MDGTFI project activities through Micro-Capital Grant (MCG).
- Study on Gorkha Earthquake 2015: Response and Learning has been very useful to understand the contexts and different ways of response. This will be helpful for government and non-government agencies for preparedness, response and recovery planning in the future.
- Development of trained pool of engineers and masons by the project before and after the EQ 2015 has been meaningful as the trained engineers and masons have been involved in the reconstruction process during 2016 as well.
- Study carried out by the project in 2012/13 - Urban Growth Trend and Hazards in Kathmandu Valley was relevant for development for RSLUP for Kathmandu Valley. The RSLUP experience from Kathmandu Valley became a knowledge base for developing RSLUP guidelines in Nepali for all the municipalities in Nepal and is being used for development of RSLUP of Chautara municipality
- Project's intervention done jointly with the government agencies has been owned by the government system/mechanisms. Examples include formalization of eBPS by KMC, LSMC and Kiritpur municipality, increased ownership of EOC network across the country.
- Implementation of e BPS has become even more effective after the earthquake and there has already been a huge demand for integrating the entire building inventory of Kathmandu Valley in e BPS. E BPS has become an integral part of KMC and will be integrated in ADB supported Municipal Administration and Revenue System (MARS) software tool.

9. IMPLEMENTATION ISSUES AND CHALLENGES

- Institutionalization of an intervention takes time. As NBC and RSLUP are new interventions, there is need for continued and sustained efforts. Long term engagement is needed for issues like NBC implementation and enforcement.
- Coordination and collaboration at local level has been a challenge due to a large number of actors present at district level in EQ affected districts.
- Wider consultations and involvement of multiple stakeholders in policy level engagement e.g. finalization of National Early Recovery Framework, ongoing National DRR Strategic Action Plan preparations, studies/reviews are taking more time than expected.
- Due to priorities of stakeholders in reconstruction, delay in project implementation and delivery were realized.

10. A SPECIFIC STORY

Changes brought by the water source conservation and its utilization for drinking water purpose by lifting system in Lekhgaun VDC Surkhet

Lekhgaun Dharapani Drinking water resource located at Lekhgaun VDC ward-9 is a natural water resource for all seasons. The local people have been using this source for drinking and irrigation purpose. However, for the last few years, they have been complaining that the area parched due to prolong drought that seems to be resulting from climate change. As a result, the local people including the local bodies like schools, VDC office and the health post are facing scarcity of drinking water. Women and children from this ward are compelled to set aside half an hour to one hour twice a day to fetch water. Every day, the students of Shree Sarashwoti Higher Secondary School have to fetch drinking water

for their class room. In each class room, the school provides a 7-liter gallon for the students to fetch water turn by turn.

There are 120 households in the community (Dalit=31, Janajati=56 and Others=33); institutions include: two schools, Lekhgaun VDC and one Health Post. Beneficiary population 640 (Dalit=176, Janajati=287 & Others=177), organizations: Lekhgaun VDC (4 men staff), Health Post (10 staff: 4 women & 6 men) and Shree Saraswoti Higher Secondary School (511: 241

Girls, 245 Boys and 25 Staffs) in the ward 7,8, 9 & one school i.e Shree Nepal Rastriye Lower Secondary School (114: 61 Girls, 48 Boys, 5Staffs) in ward 2.

Having to face the scarcity of water, long time, the local people of Lekgaun VDC demanded to prioritize the conservation of the water source on Local Disaster Risk Management Plan in 2014. The CDRMP/ICRMP project decided to provide financial aid of NRs. 16 lakhs thirty-eight thousand for Lekhgaun Dharapani Drinking Water Project.

The local community based organization "Gaun Nagarik Manch – Ward Citizen Forum" implemented project activities under CDRMP's ICRM. Under this project, it has completed the construction of a water collection chamber of 80000 L capacity and two reservoir tanks of 20 cubic meter capacity each. Moreover, it has completed the construction of 24 community taps to distribute water to VDC, Health Post and two schools plus 24 private connections (households). Technically, water has been lifted 94 m vertically up to the

reservoir tanks from the collection chamber. This way, the construction helped conserve water source and also provided drinking water facility to the community in this ward.

Even though the financial aid to the community was not enough to fulfill all the requirements of the project, the initiation was impressive enough to bring benefit for the whole community. Especially it is saving time of women and children who are often responsible for fetching household water. An irrigation pond of 42.5 cubic meter capacity has also been constructed in support of UNDP/Nepal. The excess water overflown from the collection chamber is collected to the irrigation pond built aside. Evidently, 13 households are able to irrigate their land. A village of scarce water supply which was fighting against the drought turned into a model village in the field of water conservation and utilization. In addition to the drinking water benefits, personal hygiene and toilet sanitation have also been improved.

Local people are very much excited by these activities. Further, they are planning to utilize the waste water for their own benefit. In the VDC ward-7 and 8, 35 households have already initiated setting up kitchen gardens. It will improve their nutritional status as they can consume vegetables from their own garden and eventually it will uplift their economic status as well.

Local people and Shree Gaun Nagarik Manch heartily thanked UNDP/CDRMP project for the financial support to the water source conservation project as well as providing support to the drinking water supply project in each of twenty-four households and twenty

four community taps. A hotel owner Mrs. Khagisara Adhikari 28 says, *"I am very happy to have drinking water facility in my own house. It saves my time and has improved sanitation. Now I can utilize the extra time to join the cookery classes in Birendranagar so that I can increase the cuisines in my hotel. I am sure it will increase my income."*

Mrs. Sunita Lamichane, president of Gaun Nagarik Manch says, *“I am very happy that the community got a new life. The people were suffering from water scarcity in their households and in the community as well for decades. No other organizations helped in this situation till now. Water supply is crucial in sanitation and also in our lives. The lessons we learnt from this project are self-confidence, passion and accountability. Unity and support from the community lead to success”.*

11. PRIORITIES FOR 2017

Extension of CDRMP till 31 Dec 2017 has been approved by PEB held on 20 Nov 2016. The major activities to be accomplished are briefly mentioned below:

- Formulation of National DRR Policy and Strategic Action Plan, 2017-2030.
- Finalization of Mainstreaming Guideline for DRR-CCA
- Completion of activities under CBDMA II activities
- Completion of activities under ECHO's “Resilience Communities through BBB”
- Completion of activities under GoJ supported “NBC implementation in 3 municipalities”
- Strengthening and follow up support to EOC networks
- Follow up and support to the respective ministries/NPC for sustainability of the interventions.

12. RISK AND ISSUE LOGS

Table 7: Risk Log Matrix

S. N	Description	Category (financial, political, operational, organizational, environmental, regulatory, security, strategic, other)	Likelihood of risk (scale of 1 to 5 with 5 being the most likely) A	Impact (scale of 1 to 5 with 5 being the highest impact) B	Risk factor (A x B)	Mitigation measures if risk occurs	Date risk is Identified	Last Updated	Status
1	Inadequate Political/leadership support	Political	Implementation delays. DRM law may not be enacted; NDMA and other authorities may not be set up P = 4	Regular consultations at senior level and analysis of political developments. Work on developing consensus within the government change in programme priorities accordingly 4	16	Regular consultations have been carried out to enable environment for project implementation	Jan 2011	Nov 2016	No change
2	Poor ownership and coordination among various IPs and end users	Political	Unsustainable results due to lack of ability to adjust/direct the programme results towards the needs P = 2	Regular consultations/coordination meetings with all implementers and end-users to ensure clarity of agreed results, flexibility to adjust to changing needs, put in place advisory committee	4	Regular consultations with stakeholders were carried, which improved the situation.	Jan 2011	Nov 2016	Improved

				mechanism. Two Technical Support Group (TSG) formed and moving ahead. 2					
3	Resistance by local officials and communities to engage with projects	Social	Project activities impeded P = 2	A careful identification of communities' needs and priorities. Need to respond to their aspirations and pressing needs. Awareness raising and collaboration at the local level to build ownership and trust 2	4	Participatory planning at local level was carried out and the risk was managed.	Jan 2011	Nov 2016	Improved
4	Difficulty in funding and finding high quality experts on a timely basis	Financial	Delays in implementation and low quality of work P = 3	Maintain close contact with donors, raise the profile of disaster risk reduction consortium and try to establish new ways of mobilizing resources in partnership with other consortium partners 4	12	Sharing of project's interventions results and future potentialities with donor ongoing. Quality expert's selection is prioritized.	Jan 2011	Nov 2016	Increasing
5	Delays in implementing activities	Operational	Delays in overall project	Maintain close contact with IPs and private	9	Project tried to adapt in the changed context.	Jan 2011	Nov 2016	Improved

	by IPS, private professional suppliers etc. beyond UNDP's control		implementation P = 3	professional suppliers and perform regular stocktaking of activities to be informed of any probable delay/adverse situation. Build flexibility of response to delays by identifying alternatives for IPs and private professional suppliers. 3					
6	Major Catastrophic event	Environmental	Major disruption to functioning of government, civil society and stakeholders P=1	Strengthen national-level preparedness and recovery planning. Constant update with UNDMT on contingency planning 2	2	Adaptation to the changed context was followed keeping the implementation in track as far as possible.	Jan 2011	Nov 2016	No Change
7	Medium-Scale to Large Scale natural disasters including April 25 and May 12 2015 EQs	Environmental	CO's capacity overloaded, project implemented adversely impacted P=2	Strengthen ER capacity and mobilise BPPS support in responding to EQs, realign project activities to extent possible to address new situation and requirements 4	8	Project extended support for response and recovery under guidance from Country Office and in consultation with government agencies.	Jan 2011	Nov 2016	No Change

Table 8: Issue Log Matrix

S. N.	Type	Date Identified	Description and Comments	Resolution measures recommended	Status of the issue	Status Change Date
1	Change in the draft RRF, Programme Document and 5 years work plan	Dec 2010	LPAC postponed from December 2010 to Jan 2011 due to more time needed to incorporate the government requested changes in the Programme Document.	. The changes were incorporated in the document	Resolved	March 2011
2	Change in Exchange rate	March 2011	Programme receives grants in both US dollars and Euros. The exchange rate of these currencies is fluctuating significantly exposing the programme in gain or loss.		Resolved	Dec 2015
3	Change in Priority	September 2011	Government has prioritized early recovery in the eastern Nepal affected by September 18 earthquake	Resources were mobilized to address the issue in Ilam and Taplejung.	Resolved	December 2011
4	Transfer of officials from ministries	Dec 2015	Senior officials from MoHA, MoFALD and MoUD transferred Joint secretary and undersecretary at MoHA, MoFALD and MOUD changed. Programme team provided briefing to the new officials.	Facilitation for proper orientation to new staff has been recommended.	Resolved, Ongoing	Nov 2016
5	Departure of CDRMP Programme Manager	August 2013	CDRMP Programme Manager resigned in August 2013	Technical Expert/ Int'l Advisor as OIC.	Resolved	Dec 2014
6	Declaration of new municipalities in KV	December 2014	Could potentially impact NBC implementation in 6 VDCs. and RSLUP formulation. Steering Committee meeting on the issue planned in this regard.	Consultation with the concerned new municipalities done, issue shared.	Resolved	Sept 2015
7	April 2015 mega EQ	April 2015	GoN and project stakeholders' priorities concentrated on response, relief and recovery delaying the project implementation.		ongoing, partly resolved	Dec 2015

FROM SHORTAGE TO SUSTAINABILITY

"There have been days when I left at six in the morning and returned at three in the afternoon. Not only is the distance quite long, we would always have to wait in line for the water."

TEXT AND PHOTOS: PRITHVA GURUNG

Up until earlier this year, Sanita Lamichhane, chairwoman of Sukhet's Lakhgas Drinking Water Committee, lived a gruelling life. Every day around noon break, she would see students from the nearby school rush out of their classes with empty buckets. Water supply was such a rampant household problem that, along with the adults, even the kids had to spend their free time carrying pots of water. Children as young as 12 were obliged to walk for about two hours and carry around 10 liters of water on a regular basis and despite her post at the village, Lamichhane claims to have felt helpless at the sight, every single time.

Since most of his days were spent on bringing water to his house, he rarely had enough time to devote to his business, so he could see his neighbors go through the same struggle. They thought the fate of the village was doomed, and thus many left their homes and chose to migrate elsewhere as well.

Budha Subedi, chairman of the Gadi's Drinking Water Committee, also confesses to have felt utterly powerless over the years. His VDC has a lot of historic significance. It was once even mentioned the capital of Sukhet. It is rather strategically placed as well, offering the only full view of Sukhet ranges and cities. He

also knew that there were investors who were interested in capitalizing these peaks of Gadi and starting various businesses, was it not for the water woes, but despite his best efforts, Bhanderi like Lamichhane from Lakhgas was constantly being stumped by the same problem: lack of funds.

Hanshi from the Regional Monitoring and Supervision Office again explains, "We have an annual budget of Rs. 200,000 to Rs. 400,000 for the VDCs like Gadi and Lakhgas. With this budget, we have tried small scale projects and initiated plans to collect rain water but as mentioned, they are of small scales, we weren't able

UNDP's plan was to help fund the construction of two tanks in Gadi for water storage and lay pipe networks so that they could pull the water directly from the source. But despite his best efforts, Bhanderi like Lamichhane from Lakhgas was constantly being stumped by the same problem: lack of funds.

Over at Lakhgas, they also helped the two villages, especially the one laying claim to the water source, come to a compromise. Then with an investment on two more tanks and a 20-horsepower motor, they planned to take water up to this particular village as well. They even had to construct an electric pole for the sole purpose. The completion of the project is both the

रसायनिक मल

रसायनिक मल घाउने भएकै छन् । शिवाटनगरस्थित रसायनले घानवालीका लागि पर्वान मल सन्चालन । गोदाममा १४ हजार टन सुरिया, ४ हजार ३०० को छ । धान, मूत्र, इन्डो, हल्लाम, निम्बोद, लसब, स्नाभमुसुर मल मौस्यगत रहेको बताइएको छ ।

असिमा पानीले मकै र केराखेती सखाप

भीमग हामाहुटी र असिमा/पानीले समग्ररुममा मकै र केराखेती सखाप पारेको छ । लामो खडेरीपछिको भीमग असिमापानीका कारण मकै र केरा खेतीभन्दा सखाप पारेपछि सहैका कृषक यस समयमा पोषक छन् । असिमापानीका कारण लम्जुङको धुनेनी, नेटा, निजुह, पसमाई, भोजे गाभिस तथा कागपुटा र मध्यनेपाल नगरपालिकाका १० प्रतिशत मकै र केरा खेतीमा क्षति पुगेको कृषि विभाग कार्यालयले तमजुङले जनाएको छ ।

कृषकलाई मोबाइलबाटै सम्पूर्ण जानकारी

दिलबहादुर केसी
देवराज, ८ बेंद

कृषकलाई प्राविधिक तथा बजारको जानकारी दिने कृषि घर एवम् सार्वजनिक गरिएको छ । कृषकलाई प्राविधिक जोड्न यो एवम् ल्याइएको हो । कृषि घरलाई कृषि विभागअन्तर्गत कृषि सुचना तथा सन्चार केन्द्रले एवम् ल्याएको हो ।

आयोजनाले पहिलो चरणमा नेपालका सभ्य जिल्लामा यसलाई प्रयोगमा ल्याउने योजनाको छ । यसपछि देशभरि गर्ने योजना रहेको केसीले बताए । अहिले देवराज, फिचन, तिमपुराल्पको, मुर्झी, पाटिड, रम्झ

गोपिचन्द्र सुनुप नेतृत्व छुन्छ । त्यसमा गृह मन्त्रालय, 'जानकारीहरू' र भेरो कृषि तालिमका अखन विद्यार्थी हुन्छ । गृह मन्त्रालय विभिन्न जानकारी, मीसम, कृषि इयापी, नयाँ जानकारी, तलकारी गृह, कृषि समाचार, जानकारी प्रदायक संस्था, सफलताका कथाकावाक्यावली

एउटैमाफिर्त ७५ वटै जिल्लाका महत्वपूर्ण गतिविधि र जानकारीसमेत पाउन सकिने भएकोले कृषकको साथी नै हुने

गर्दाएको छ । सूचनाको साथै साथी नै हुने बताए । अग्रघोष वृद्धि गरी किसानको जीवनस्तर अकलन यो शीघ्र सहयोगी हुने विश्वासले बताएका छन् ।

कसरी प्रयोग गर्ने ?
यो एवम् प्रयोग गर्ने तरिका सरल छ । एन्ड्रोइड मोबाइल भएकै किसानले आफ्नो मोबाइलमा प्ले स्टोर एप खोल्ने । त्यसमा कृषि घर टावर गरी सर्च गर्ने र डाउनलोड गर्ने । त्यसमा क्लिक

विषय राखिएको छ ।
यसो, 'जानकारीहरू'मा प्रशासन, तालिम, विभिन्न सरकारी सेवा, रोग किरावाको जानकारी लिन सकिनेछ । बाली लगाउने तरिका र विभिन्न जानकारीभूलाक विषय पनि यहाँ समावेश गरिएको छ ।
किसानलाई आवश्यक कुनै सूचना नभए एवम्माफिर्त प्राविधिकलाई प्राप्त गर्न सक्ने व्यवस्था गरिएको छ । यसको उद्देश्य किसानले मोबाइलमा पाउनेछ ।

महानगरमा साउन १ देखि अनलाइनबाटै नक्सा पास

दमोद नौवने, काठमाडौं

असार २९, २०७३-

- फाइल बोकेर वडा कार्यालयदेखि महानगरसम्म धाउने पर्ने झन्डोटबाट मुक्ति
- फाइल के हुँदै छ, कहाँ अडकियो भनेर ट्याकिङ गर्न व्यवस्था
- कति नक्सा पास भए, राज्यस कति उठेजस्ता सूचना सजिलै पाइने

काठमाडौं महानगरपालिकाले १९ वटा वडामा अनलाइनबाटै नक्सा पास गर्न थालेको छ । साउन १ देखि पुरै महानगरभरि अनलाइनबाट नक्सा पास हुनेछ ।

Annex 3: Stories on Women Empowerment

Changes brought in women's daily lives due to Biogas Plant Installation

SURKHET- Tulsi Jaisi, president of the Biogas plant users' group is the first one to install biogas plant in her village Sirichaur, Kunathari VDC Surkhet. She used to cook in a traditional stove that required a lot of firewood and extra effort. The smoke and soot produced by burning firewood caused eye and throat problems to her and her family members. But time has changed now and the daily cooking chores have become much easier after the installation of biogas plant. Her kitchen has a clean cooking system which requires no firewood and this has resulted in improvement in her family's health as no smoke is produced while cooking. Tulsi says she guide her children in their homework at the same time she is busy in cooking. She says *"I am very glad that we took initiative for installing the biogas in our village and now our living standard has improved"*.

The local community based organization Shree Masina Community Forest Users Group (CFUG) has implemented Climate Risk Management and Livelihood Promotion Project in this village. Under this project, it has completed the construction of 8 biogas plants in Sirichaur and 12 biogas plants in Belchaur each with 6 cubic meter capacity. In Sajgaire, the community consists of 20 households, of which 14 are Janajatis and 6 are Bahun/Chhetri). Total no. of beneficiaries population are 104 (Female: 60, Male :44) based on ethnicity. Twenty Biogas plants have been constructed with the support of UNDP/CDRMP. During the period of construction Masina CFUG had also coordinated with K.P Business Pvt. Ltd,

Birendranagar (one technical, fitting materials and cooking stoves under government subsidy), Shree Aampani CFUG, Kunathari, Shree Salleri CFUG for further support to make the program a big success.

The programme provided technical and financial support as well as subsidy to the families to build biogas plants in rural areas and it helped many rural households with low income make biogas technology affordable and accessible to a great extent. Today, other farmers like Jaisi are satisfied for their decision to build plants, as they can reap more benefits than they imagined. *"The biogas technology has brought so many positive changes in our lives. Certainly, all the families who own biogas plants feel the same"* says Jaisi. She used to spend several hours to collect firewood every Saturday in the near forest. But now, due to biogas, her family does not need to spend money on firewood because biogas suffices the fuel requirement for cooking. *"The neighbors often visit us and get impressed by knowing how easy it is to save money, reduce cooking time and hence enable women to take up other activities and increase overall health situation by reducing smoke and soot in the kitchen. It eliminates health hazards caused by indoor air pollution. We have completed 8 biogas plants*

in Sirichaur by helping each other during the construction work. That is how we saved labor cost” explains Jaisi smiling with pride. She says that they were the same people who had agreed to initiate the construction but finally they changed their mind as they considered that they had to carry all the required materials like cement, fitting materials from Baddichaur, Kunathari

and sands from Sotkhola river by themselves due to the lack of transportation. This would take 2-3 hours. They also suspected that the biogas would not be beneficial for them. Jaisi still remembers those days of their hardwork and team building among the 8 beneficiaries in Sirichaur. At that time, she was little upset because she had tried to convince the remaining 12 beneficiaries to construct biogas plant but she couldn't. The users group decided to transfer to the other wards i.e. Belchaur 5, Kunathari. She shows her satisfaction that the biogas users group is planning to collect seed money for maintenance training for their use.

“I was planning to construct an improved cooking stove but I changed my mind when I came to know that Masina CFUG is coordinating to construct biogas plants in my village. It was like I found a diamond while searching for coal” says Bal Kumari Jaisai *“I’m glad that I had used the slurry and the production has improved this year”* says Jaisai she also explains how the digested slurry, discharged from her biogas plant proved to be far more effective than the chemical

fertilizers. Many farmers have realized the difference brought by the use of bio-slurry as fertilizer and they have are gradually reducing the use of chemical fertilizers like Urea, Diammonium Phosphate (DAP) and Potash.

“Environmentally, when we use biogas as energy resource, it contributes to clean environment. Organic wastes are transformed into high-quality enriched bio-manure/fertilizer that reduces deforestation and improves biodiversity. The by-product of the biogas plant is high-quality manure that improves

soil condition” says Manoj Pandey, Secretary of Shree Masina CFUG, Kunathari.

“We are planning to develop Belchaur village as a Namuna (model) Village in Biogas Plant installation as we’ve already started 12 biogas plants construction in Belchaur with the support of UNDP/CDRMP. In addition, the Community Forest Users Groups (CFUGs) are also helping to construct 21 more biogas plants in Belchaur on their own expenses. They are also coordinating with other organizations to develop Belchaur as a Namuna Village in Biogas plant. In Belchaur, there has already been 33 HHs who have constructed biogas plants” says Chandra Gautam (President of Masina CFUG).
