# Report on Thailand Gender-Disaggregated Statistics 2008 

Office of Women's Affairs and Family Development Ministry of Social Development and Human Security in collaboration with
United Nations Development Programme

## Preface

In the past, the lack of gender-specific data in national statistics has made it difficult to carry out effective development planning for women in Thailand. It has been hard to estimate the extent of problems that women face, such as women's health issues and violence against women and girls. Data is also dispersed, having been produced and disseminated by many different government agencies.

In response, the Ministry of Social Development and Human Security's Office of Women's Affairs and Family Development, together with UNDP, have launched Thailand's first "Gender-Disaggregated Data and Database Project". The project establishes an integrated database that allows for the easy access and use of data disaggregated by gender; for use in the planning and implementation of policy that promotes the equality and advancement of women.

For the first time information such as the average income of households headed by men and women, computer and internet literacy of men and women, number of women and men in the media, number of hours women and men spend on household maintenance, in specific areas will be readily available to all government agencies, the academics, NGOs, and the public. The database and associated information systems will also help Thailand meet its obligations to important international commitments such as the Beijing Declaration and Action Plan, the Convention on the Elimination of All Forms of Discrimination Against Women, and the Millennium Development Goals.

The following report presents gender-disaggregated and gender-related statistics collected or processed from the files and databases of various government and non-government agencies. The report presents 2002-2006 statistics by sex, administrative area and region and, in some cases, province. Definitions, calculation methods, data sources, as well as data development plan are included. We hope that this report will be useful for policy-makers, officials, academics, and the public, and that it will support all concerned in the promotion of gender equality and the protection of women's rights.

Last but not least, we would like to thank all the government and non-government organizations for their kind collaboration in providing these important data to the project.

(Mr. Chanyut Kosirinond)
Deputy Permanent Secretary for Permanent Secretary, Ministry of Social Development and Human Security

(Ms. Gwi-Yeop Son)
UN Resident Coordinator UNDP Resident Representative in Thailand

## Introduction

The Gender-disaggregated Database represents the Bureau of Gender Equality Promotion, Office of Women and Family Development, Ministry of Social Development and Human Security (BGEP/OWAFD/MSDHS) and the United Nations Development Programme (UNDP) Thailand's endeavour to develop a database system that promotes pubic awareness on gender issues and policy-making and programme targeting towards gender equality.

The Gender-disaggregated Database will support the fulfillment of Thailand's obligations to important international commitments such as the Beijing Declaration and Action Plan 1995, the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW), and the Millennium Development Goals 2000.

## Structure and Scope of the Gender-disaggregated Database

The structure of the database is based on the Bejing Declaration and Action Plan's 12 most discerning issues, namely (1) women and poverty, (2) education and training of women, (3) women and health (4) violence against women, (5) women and armed conflicts, (6) women and the economy, (7) women in power and decision making, (8) institutional mechanism for the advancement of women, (9) human rights of women (10) women and the media, (11) women and the environment, and (12) the girl-child.

Other references are the Human Development Index (HDI), the Gender-related Development Index (GDI), the Gender Empowerment Measure (GEM), the Millennium Development Goals (MDGs), and the Human Achievement Index (HAI).

The Gender-disaggregated Database is a continuing project. It starts off with the first installment of selected indicators and data that support these indicators. The data will be updated periodically, at least annually. The database is also expected to expand with more indicators, more data, more detailed disaggregation, for the purpose of highlighting the gender aspect to support the analyses and policy formulation of various government agencies.

## Data Sources and Data Management

In most cases, the scope of the data is a five-year span. Area disaggregation is administrative (urban -rural), regional, and provincial when possible. Gender-disaggregation is the primary concern. In some cases, data are processed from the database to produce gender-disaggregated data at various levels. For example, data that were disaggregated by region or by sex are now disaggregated by region and sex. Data that were disaggregated by region and sex, or by administrative area and sex, are now disaggregated by region and administrative area and sex. In other cases, administrative records were processed and calculated into gender-disaggregated data and indicators.

A large part of the data are from censuses or surveys conducted by the National Statistical Office (NSO). Some data are available in the NSO's data tables, but some have to be processed from the NSO database. Some data are from administrative records or registration which have not been
processed, or processed in a non-gender-disaggregated manner. Some data are dispersed among various sources, and there has not been an integrated data collection system, agreed definition, or standard. This project has filled some, but not all of these gaps.

Standardization was a great challenge. The data collected from various government and non-governmental organizations are structured differently. For example, some agencies include Bangkok in the Central Region, some feature Bangkok separately, some put Bangkok and Bangkok vicinity in one cluster. When possible, data are reprocessed to present the data in the same regional classification system - Bangkok and 4 regions (Central, North, Northeast, and the South).

This report also provides basic information concerning definitions, calculation method, data sources, data collection, agencies responsible for data collection, data processing, data dissemination.

## Data Gap

Most data have some data gaps. The project took temporary measure to close some gaps. In other cases, the project suggests a data development plan to close the gap permanently. This varies from identifying appropriate data source (s), changing the data collection system, processing or reprocessing the data, restructuring or recalculate the data, etc. In most cases, the data development plan requires an inter-agency collaboration, especially between the agency responsible for the data and the BGEP/OWAFD/MSDHS. In some cases, the responsible agencies agreed to produce the data as per the specified format, upon the request of the BGEP/OWAFD/MSDHS. In other cases, data reprocessing and restructuring to show gender breakdowns should be the responsibility of the BGEP/OWAFD/MSDHS.

## Data Dissemination

All in all, the Gender-disaggregated Database and the Gender Statistics Report represent an attempt to promote the production, exchange, use, and development of gender data and data system, which in turn will support the analysis, advocacy, and policy-making related to gender development. Database will be available on-line at www.gender.go.th to facilitate convenient access to the data by government agencies, academics, NGOs and the public.

## Selected Interesting Statistics:

## Women in Poverty:

■ Poverty incidence was slightly lower among women, compared with men. But in the South, it was on the rise among women and poverty incidence was higher among women than men in 2006.

■ Female-headed households scored better than male-headed households. But the male-headed households fared better in Bangkok and the North.

- But average income of female-headed households was lower than that of male-headed households in every region, with the largest gap in the South. An encouraging sign is that the gap became smaller in 2006.

## Education and Training of Women:

- Men's mean years of schooling was more than women's. But the largest gap was between the urban and rural areas. Bangkok had the most years of schooling, and women had more years in school than men. The Northeast lagged behind other regions
- The enrolment rates for both sexes at the primary and lower secondary levels were very high. The rates dropped off at the upper secondary and tertiary levels, where women scored higher enrolment rates.
- Among the youth, women posed higher computer and internet literacy rate than men throughout the country. In the South, more women than men used computer.
- In so far as literacy is concerned, men fared better than women in all regions. The largest gender gap was observed in the North.
- In the 6-29 age group, women read more or as much as men. But after the age of 30, men surpassed women in both urban and rural areas.

## Women and Health:

- The South had the lowest coverage of standard pregnancy check-ups and birth attended by health personnel, and the highest maternal mortality rate.
- Most women practiced birth control. Most popular contraceptive methods were oral pills, female sterilization, and injection. Male sterilization accounted for only $1.1 \%$.
- In the past two years, smoking among population dropped, but women's smoking rate increased. So was women's alcohol drinking.
- Women's illness rate was higher than men, but women had longer life expectancy at birth. The Northerners, men and women, had the highest illness rate and the shortest life span.
- Elderly women outnumbered men in all areas and regions, and a large number lived alone.

## Violence against Women:

- Twenty One Stop Crisis Centers - OSCCs were established in 2002. The number increased to 171 in 2006. Various types of shelter under the MSDHS expanded from 35 to 66 during 20032006.
- Number of women and children seeking assistance at the Ministry of Social Development and Human Security's shelters and assistance centers almost doubled in the last two years, largely due to sexual violence.
- Closed court cases related to rape and other sexual violence against women rose steadily from 4,896 to 9,653 during 2002-2006.

## Women and Armed Conflict:

- Women made up only $16.7 \%$ of the National Reconciliation Committee, appointed by the Cabinet to provide advice on peaceful solution to the violence in the Southernmost provinces.

## Women and the Economy:

■ Women's labour participation rate was lower than men, but unemployment rate was lower among women, especially urban women.

- Women were outnumbered by men in non-agricultural employment and women's income was $94 \%$ of men's.

■ In 2005, 32\% of the executives of the 1,399 labour unions were women.

- In 2006, women accounted for $21.65 \%$ of the directors of the companies registered at SET. The share of female directors of the companies registered at the Ministry of Commerce was higher - at $35 \%$.
- On average, women spent 2.7 hours per day on unpaid household maintenance and 3.3 hours per day on unpaid care for own household members, compared with 1.5 hours, and 2 hours, respectively by men. The largest gender gap was in the rural North.

## Women in Power and Decision-making:

- In the 2005 general election, women made up $11.4 \%$ of the House of Representatives. The representation was lowest in the South and the Northeast. The highest representation 21.6\% was in Bangkok.
- During 2001-2006, Thailand had 3 Cabinets, with a very low but rising women representation; it was $8.6 \%$ in 2006.
- In 2007, women accounted for $11.3 \%$ of the executives of major political parties, an increase from 8.4\% in 2005
- During 2002-2005, the proportion of female executives in the civil service increased to $23.1 \%$. The increase took place at all levels, except at the highest level - C 11.

■ In 2006, women outnumbered men as eligible voters. Women's and men's vote turnout rates were very close, at $65.9 \%$ and $65 \%$ respectively.

## Institutional Mechanism for the Advancement of Women:

- In 2006, there were 129 Gender Focal Points, and the ratio of Gender Focal Points to government agencies at department-level and higher was 0.84.

## Human Rights of Women:

- The first National Human Rights Commission of Thailand consisted of 11 commissioners, 5 men and 6 women.

## Women and the Media:

- The proportion of women in the media reached $38.4 \%$ in 2006. In general, women were slightly more active in the broadcast media than the print media.

## Women and the Environment:

- The proportion of women attending the natural resources and environmental training organized by the Environment Research and Training Center, Ministry of Natural Resources and the Environment dropped from 58.6\% in 2002 to 45.7\% in 2006.

## The Girl-Child:

■ Males outnumbered females at birth. Sex ratio at birth was approximately 0.94 in every part of the country.

- While low birth weight was higher among female newborns, especially in the North, infant mortality rate and under 5 mortality rate were higher among males, especially in the South.
- Among children 5 years and under, the underweight rate was higher among boys, especially in the Northeast and the South.

## Table of Contents

The Gender-disaggregated Database now features 74 indicators. This includes some indicators that bear significant implications on women's development and gender equality, but data are not currently available.

1. Women in Poverty (3 indicators)
1.1 Poverty Incidence ..... 13
1.2 Poverty Incidence among Female-headed Households ..... 21
1.3 Average Income of Female-headed Households as Proportion of ..... 24
Average Income of Male-headed Households
2. Education and Training of Women (14 indicators)
2.1 Mean Years of Schooling of Population 15 Years and over ..... 27
2.2 Gross Enrolment Rate ..... 29
2.3 Female and Male Gross Enrolment Rate ..... 31
2.4 Retention Rate ..... 33
2.5 Ratio of Female to Male Students in Selected Subjects of Tertiary Education ..... 35
2.6 Ratio of Women to Men in ICT Occupations ..... 38
2.7 Computer Literacy Rate among Population 6 Years and over ..... 42
2.8 Internet Literacy Rate among Population 6 Years and over ..... 40
2.9 ICT literacy rate among Population 15-24 Years Old ..... 50
(1) Computer Literacy Rate among Population 15-24 Years Old ..... 50
(2) Internet Literacy Rate among Population 15-24 Years Old ..... 54
2.10 Literacy Rate among Population 15-24 Years Old ..... 57
2.11 Literacy Rate among Population 40 Years and over ..... 60
2.12 Literacy Rate among Population 15 years and over ..... 63
2.13 Ratio of Women to Men in Occupational Training ..... 66
2.14 Proportion of Population 6 Years and over with Reading Habit ..... 69
3. Women and Health (13 indicators)
3.1 Life Expectancy At Birth ..... 73
3.2 Proportion of Pregnant Women Receiving Standard Check-ups ..... 75
3.3 Proportion of Births Attended by Health Personnel ..... 81
3.4 Maternal Mortality Rate ..... 86
3.5 Abortion Rate ..... 92
3.6 Birth Control Rate ..... 93
3.7 Women's Smoking Rate ..... 97
3.8 Women's Alcohol Consumption Rate ..... 100
3.9 HIV Prevalence among Pregnant Women ..... 103
3.10 HIV Prevalence among Women in Reproductive Ages ..... 108
3.11 Illness Rate ..... 109
3.12 Proportion of the Elderly and Elderly Living Alone ..... 113
3.13 Population with Disability ..... 116
4. Violence against Women (7 indicators)
4.1 Number of Women Shelters ..... 119
4.2 Number of Women and Children Victimized by Domestic Violence ..... 121
4.3 Incidence of Sexual Violence against Women ..... 125
4.4 Number of Court Cases Related to Sexual Violence against Women ..... 126
4.5 Number of Court Cases Related to Prostitution ..... 128
4.6 Number of Court Cases Related to Human Trafficking ..... 130
4.7 Number of Women and Children Seeking Assistance from Women Shelters ..... 131
5. Women and Armed Conflict (1 indicator)
5.1 Proportion of Women in Peaceful Conflict Resolution ..... 132
6. Women and the Economy ( 13 indicators)
6.1 Proportion of Women Receiving Skills Training for Income Generation ..... 133
6.2 Proportion of Job Placement and Job Placement Success Rate for Women in Thailand and Abroad ..... 135
6.3 Labour Participation Rate ..... 138
6.4 Unemployment Rate ..... 140
6.5 Ratio of Women's to Men's Income from Waged Employment in Non-Agricultural Sector ..... 142
6.6 Ratio of Women to Men in Waged Employment in Non-Agricultural Sector ..... 144
6.7 Proportion of Women in the Labour Unions ..... 148
6.8 Proportion of Female Executives in the Private Sector ..... 150
6.9 Provision of Unpaid Domestic Services ..... 152
(1) Hours on unpaid household maintenance by population 10 years and over ..... 152
(2) Hours on unpaid care for own household members ..... 154
6.10 Proportion of Non-formal Workers ..... 156
6.11 Proportion of Population Desiring Skills/Capacity Development ..... 160
6.12 Migration Rate ..... 164
6.13 Average Time of Population 10 Years and over by Activity ..... 169
7. Women in Power and Decision-Making (7 indicators)
7.1 Proportion of Women in the Parliament ..... 172
7.2 Proportion of Women in the Cabinet ..... 175
7.3 Proportion of Women in Political Party Executive Committees ..... 176
7.4 Proportion of Women in Executive Positions in the Civil Service ..... 178
7.5 Proportion of Women in Local, Village, and Sub-district Administration ..... 180
7.6 Proportion of Women's Votes and Women's Vote Turnout ..... 183
7.7 Proportion of Female Government Officials in Leadership Training ..... 185
8. Institutional Mechanism for the Advancement of Women (3 indicators)
8.1 Proportion of Women in Parliamentary Committees on Women Affairs ..... 188
8.2 Ratio of Gender Focal Points to Government Agencies ..... 190
8.3 Proportion of Female Government Officials Participating in Gender Training ..... 191
9. Human Rights of Women (1 indicator)
9.1 Proportion of Women in the National Committees on Human Rights ..... 193
10. Women and the Media (1 indicator)
10.1 Proportion of Women in the Media. ..... 194
11. Women and the Environment (3 indicators)
11.1 Proportion of Women in the National Committees on the Environment ..... 197
11.2 Proportion of Women in Natural Resources and Environmental Training ..... 198
11.3 Proportion of Women as Leaders in Natural Resources and Environmental Management ..... 200
12. The Girl-Child (8 indicators)
12.1 Sex Ratio at Birth ..... 201
12.2 Infant Mortality Rate ..... 206
12.3 Under 5 Mortality Rate ..... 212
12.4 Low Birth Weight ..... 218
12.5 Proportion of Underweight Children 5/6 Years and under ..... 224
12.6 Proportion of Births by Women Under 20 Years Old. ..... 231
12.7 Number of Child/Minor Abuse Cases ..... 237
12.8 Number of Abused Children/Minors ..... 238

## 1. Women and Poverty

## Indicator 1.1 Poverty Incidence

Poverty incidence by sex shows the proportion of men and women under the poverty line. The data are useful for targeting, planning and evaluating poverty programmes.

## Definition

Poverty line is a measure of poverty, calculated from necessary food and non-food expenditures each person needs for subsistent living (Baht/person/month). Poverty line can be expenditures-based or income-based.

Poverty incidence (based on expenditures) refers to proportion of population that have necessary food and non-food expenditures less than the poverty line.

## Calculation method

Calculate food and non-food expenditures required for subsistence living of every family member into monetary term. Compare with actual household expenditures. A household is considered "poor" if the household expenditures are less than the amount required for subsistence living (the poverty line). Each and every member of that family is considered "poor".

Poverty incidence (expenditures-based) = Population whose household expenditures are less than the poverty line/Population X 100

## Data source/dissemination

The Community Economic Development and Income Distribution Office, the Office of the National Economic and Social Development (NESDB) calculates poverty statistics from the National Statistical Office's Household Socio-Economic Survey conducted every two years. The NESDB has produced poverty statistics every two years since 1988.

Data are disaggregated by sex, administrative area and region, and since 1994 by province. Provincial data by sex are available in 2006 as requested by the BGEP/OWAFD/ MSDHS.

Report on the Poverty and Income Distribution Data 1988-2006 (November 2007) is available at http://poverty.nesdb.go.th

## Data presented in this report

Poverty incidence by sex, administrative area, and region 2002, 2004, 2006.
Poverty incidence by sex, and province 2006.

## Data development plan

BGEP/OWAFD/MSDHS to seek collaboration from the NESDB to produce genderdisaggregated data by sex, administrative area, region, and province.

## Poverty situation

Poverty incidence among men and women was highest in the Northeast, followed by the North, South, Central Region, and Bangkok. The poor were largely rural inhabitants. Poverty incidence was slightly lower among women, compared with men. But in the South, it was on the rise among women and poverty incidence among women was higher than men in 2006.

In 2006, provinces with the highest poverty incidences among women were Mae Hong Son (51.29), Buri Ram (31.09), Narathiwat (27.23), Nakhon Phanom (23.94), Ubon Ratchathani (23.39).

Provinces with the lowest poverty incidences among women were Phang-Nga, Phuket, Samut Prakarn (0), Chonburi (0.14), Nonthaburi, Nakhon Pathom (0.31), Bangkok (0.43), and Rayong (0.46).

## Poverty incidence

Poverty incidence (expenditures-based) by sex, administrative area, and region

| 1) Poverty incidence (\%) | 2002 |  |  | 2004 |  |  | 2006 |  |  |

## Indicator 1.2 Poverty Incidence among Female-headed Households

Female heads of households are likely to have more occupational constraints than their male counterparts. Female-headed households therefore face more difficulties in making ends meet. These data are useful for targeting, planning and evaluating poverty programmes.

## Definition

Poverty line is a measure of poverty, calculated from necessary food and non-food expenditures each person needs for subsistent living (Baht/person/month).
Poor households are households that have necessary food and non-food expenditures less than the poverty line.
Head of household is the person whom other members of the family respect and regard as such, whether or not he or she is responsible for the family's finance and welfare.

## Calculation method

Poverty incidence among female-headed households = Number of female-headed households that have necessary food and non-food expenditures less than the poverty line/Number of female-headed households X 100

## Data source/dissemination

Community Economic Development and Income Distribution Office, the Office of the National Economic and Social Development (NESDB) calculates poverty data from the National Statistical Office's Household Socio-Economic Survey conducted every two years. The NESDB has produced poverty statistics every two years since 1988.

Data are disaggregated by sex, administrative area, and region.

Report on the Poverty and Income Distribution Data 1988-2006 (November 2007) is available at http://poverty.nesdb.go.th

## Data presented in this report

 Poverty incidence by sex of the head of household, administrative area, and region, 2002, 2004, 2006.Data development plan -

## Household poverty

Proportion and number of poor households have continued to drop. In 2006, poverty incidence was $8.7 \%$. Female-headed households scored better than male-headed households at $8.4 \%$ and $8.9 \%$ respectively. But male-headed households fared better in Bangkok and the North.

Poverty incidence (expenditures-based) by sex of the head of households, administrative area, and region

## Indicator 1.3 Average Income of Female-headed Households as Proportion of Average Income of Male-headed Households

Due to some socio-economic constraints, women-headed households may have less income than men-headed households. These data are useful for targeting, planning and evaluating poverty programmes.

## Definition

Head of household is the person whom other members of the family respect and regard as such, whether or not he or she is responsible for the family's finance and welfare.

Household income includes cash and in-kind income.

## Calculation method

Average income of women-headed households as proportion of average income of menheaded households = Average income of women-headed households/ Average income of men-headed households X 100

## Data source/dissemination

The National Statistical Office (NSO) conducts a Household Socio-Economic Survey every two years. Data on average household income are disaggregated by administrative area, and region. Data can be processed to present gender-disaggregated data.

Contact Tel. 02-281-0333

## Data presented in this report

Average household income by sex of the household head, administrative area, and region 2004, 2006

Data development plan
BGEP/OWAFD/MSDHS to seek collaboration from the NSO to produce gender-disaggregated data by sex, administrative area, region.

## Average household income

Average income of female-headed households was lower than that of male-headed households in every region, with the largest gap in the South. An encouraging sign is that the gap became smaller in 2006.

Average Income of female-headed households to average income of male-headed households

| Average household income | 2004 |  |  |  | 2006 |  |  |  |

## 2. Education and Training of Women

## Indicator 2.1 Mean Years of Schooling of Population 15 Years and over

Mean years of schooling is an overall indicator of the population's potential for human and social development. It also reflects the society's capacity to provide an adequate and equal opportunity for education.

## Definition

Number of years that populations aged 15 and over spent in formal education or equivalent.

Calculation method
The National Statistical Office's Labour Force Survey (LFS) includes a question on education attainment (highest level of education).

Calculated from the LFS data (3rd quarter), weighted by population 15 years and over.

Data source/dissemination
Office of the Education Council, Ministry of Education (MoE) calculates this indicator from the LFS every two years. Gender disaggregation is available at the national level, but is not available by administrative area, or by region.

## Data presented in this report

Mean years of schooling calculated from LFS (3rd quarter) by sex, administrative area, and region 2005-2006.

## Data development plan

BGEP/OWAFD/MSDHS to seek collaboration from the Office of the Education Council, MoE for data disaggregated by sex, administrative area, and region.

## Mean years of schooling

Mean years of schooling of population 15 years and over increased from 8.2 in 2005 to 8.3 in 2006. Men were slightly better off than women. But the largest gap was between the urban and rural areas. Bangkok had the highest mean years of schooling, and women had more years in school than men. The Northeast lagged behind other regions.

Mean years of schooling of population 15 years and over

Mean years of schooling of population 15 years and over by sex, administrative area, and region

## Indicator 2.2 Gross Enrolment Rate

Gross enrolment rate shows the government's capacity to provide access to education to children and the youth in every area of the country.

## Definition

Students in each education level as percentage of population in the corresponding education age group. The enrolment rate may exceed $100 \%$ if there are under-aged or over-aged students.

Age group for primary level $=6-11$ years old
Age group for lower secondary level $=12-14$ years old
Age group for upper secondary level $=15-17$ years old
Age group for tertiary education $=18-21$ years old

## Calculation method

Number of students in the education level/Population in the corresponding education age group X 100

## Data source/dissemination

Education Statistics in Brief 2006, Education Management Information System and Communication, Office of the Permanent Secretary, Ministry of Education (MoE)

Population 2001-2003 from Estimated Population by Age Group, Office of the Education Council, Ministry of Education.

Population 2004-2006 from Population by Age Group, Bureau of Registration Administration, Department of Provincial Administration, Ministry of Interior, at 31 December.

## Data presented in this report

Enrolment rates 2002-2006 from the Education Statistics in Brief 2006, Education Management Information System and Communication, Office of the Permanent Secretary, MoE, Table 3: Enrolment rates by class and education level 2001-2006.

## Data development plan

There are 2 data sources providing different sets of data:

1) Education Statistics in Brief 2006, Education Management Information System and Communication, Office of the Permanent Secretary, MoE
2) Thailand Education Statistics 2003-2005, Office of Education Council, and website (13 August 2006) (www.thaiedstat.org/modules.php?name=News\&file=article\&sid=94)

BGEP/OWAFD/MSDHS inquired and received explanations from the Education Management Information System and Communication, Office of the Permanent Secretary, MoE that data from 2) include students in non-formal education and in facilities beyond the MoE's jurisdiction, e.g. schools administered by local administrative organizations.

## Student enrolment

Gross enrolment rates for primary and lower secondary levels which are mandatory education were very high. Tertiary enrolment also increased rapidly.

## Gross enrolment rate

(\%)

## Gross enrolment rate by education level

| Education level | education <br> age group | gross enrolment rate (\%) |  |  |  |  |
| :--- | :---: | ---: | ---: | ---: | ---: | ---: |
|  |  | 2003 | 2004 | 2005 | 2006 |  |
| total | $3-21$ | 75.96 | 75.75 | 81.64 | 82.84 | 84.68 |
| pre-primary level | $3-5$ | 69.94 | 65.00 | 74.44 | 74.95 | 75.03 |
| primary level | $6-11$ | 104.77 | 104.49 | 104.24 | 104.17 | 103.47 |

## Indicator 2.3 Female and Male Gross Enrolment Rates

Gross enrolment rates by sex is a measure of equal access and opportunity for education of girls and boys as well as the government's capacity to provide education to children and youths in every part of the country.

## Definition

Female or male students in each education level as percentage of female or male population in the corresponding education age group. The enrolment rate may exceed $100 \%$ if there are under-aged or over-aged students.

Age group for primary level $=6-11$ years old
Age group for lower secondary level $=12-14$ years old
Age group for upper secondary level $=15-17$ years old
Age group for tertiary education $=18-21$ years old

## Calculation method

Number of female or male students in the education level/Female or male population in the corresponding age group $\times 100$

Data source/dissemination
Education Statistics in Brief 2006, ICT Center, Office of the Permanent Secretary, Ministry of Education (MoE), Table 2: Number and enrolment rates of students in formal education by class and education level, 2006

In 2006, the Education Management Information System and Communication, Office of the Permanent Secretary, MoE began collecting student data by school, class, and sex, covering all 11 categories of educational facilities.

Population by sex at 31 December 2006 from Bureau of Registration Administration, Department of Provincial Administration, Ministry of Interior.

## Data presented in this report

Gross enrolment rate by sex, and education level 2006.

Data development plan -

## Enrolment rates of girls and boys

Girls and boys in Thailand have equal access and opportunity for education. The nine-year mandatory education has mobilized all children and youth into the school system to complete lower secondary education. As a consequence, the enrolment rates for both sexes at the primary and lower secondary levels were very high. The rates dropped off at the upper secondary and tertiary levels, where women scored higher enrolment rates.

Gross enrolment rate by sex, 2006

Gross enrolment rate by sex, and education level

| Education level | educatio n age group | 2006 academic year |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| tertiary level | 18-21 | 1,868,233 | 1,809,601 | 3,677,834 | 1,138,571 | 1,363,388 | 2,501,959 | 60.9 | 75.3 | 68.0 |

## Indicator 2.4 Retention Rate

Retention rate indicates the ability of students to stay in the school system. Some students may have to drop out of school, which represents lost opportunity for both the students and the society. Drop-out students face difficulties in obtaining and qualifying for good positions in the job market.

## Definition

Number of students in the first academic year of the education level as percentage of the last academic year of the same education level for the same class. The retention rate for the primary level is the percentage of students in grade 1, compared with students in grade 6 of the same class five years ago.

## Calculation method

Primary retention rate $=$ Number of students in grade $6 /$ Number of students in grade 1 five years ago X 100

Lower secondary retention rate $=$ Number of students in grade $9 /$ Number of students in grade 7 two years ago X 100

Upper secondary retention rate $=$ Number of students in grade $12 /$ Number of students in grade 10 two years ago $\times 100$

## Data source/dissemination

Thailand Education Statistics, Education Analysis and Forecast Center, Research and Development Bureau, Office of the Education Council, Ministry of Education (MoE).

## Data presented in this report

Retention rates (no gender disaggregation) 1991-2002, 1994-2005

Data development plan
Office of the Permanent Secretary General, MoE's priority is on the collection of all key education data, after which the Center will attempt to collect gender-disaggregated retention data.

## Student retention

During 1994-2005, retention rate at the primary level was $79.1 \%$, a noticeable decline from $85.9 \%$ during 1991-2002. No significant change was observed at the lower and upper secondary levels.

Retention rate 1991-2002

Retention rate 1994-2005

Retention rate by education level

## Indicator 2.5 Ratio of Female to Male Students in Selected Subjects of Tertiary Education

Ratio of female to male students in tertiary education indicates the equality of access and opportunity in higher education. The predominance of male or female students in selected subjects may reflect unequal opportunity, preferences, or the influence of social perception on gender roles.

## Definition

Tertiary education includes diploma, bachelor's, graduate, post graduate, and doctoral programmes. Tertiary education is categorized by the International Standard Classification of Education (ISCED) into 10 subjects.

## Calculation method

Ratio of female to male students in selected subjects of tertiary education = Number of female students in selected subjects of tertiary education/Number of male students in the same subjects

## Data source/dissemination

The Higher Education Data and Information, Office of the Commission on Higher Education, Ministry of Education (MoE) collects data on students in tertiary education. There was a data gap during 2003-2005 as some tertiary institutions did not report their data.

In 2006, the Office of the Commission on Higher Education, MoE resumed the data collection. This system is now based on individual records.

Gender disaggregated data are available for only public universities/colleges.
Data presented in this report
Students in selected subjects of tertiary education by sex 1997-2002.
Data development plan
BGEP/OWAFD/MSDHS to seek collaboration from the Office of the Commission on Higher Education, MoE, to produce gender-disaggregated data that include private universities/colleges.

## Tertiary education

In tertiary education, women outnumbered men in Humanities, Religion and Theology, Medicine and related subjects, Social Science, Education, and Teaching. Men outnumbered women in Engineering, Law, Agriculture, Forestry and Fishery, Fine and Applied Arts. In recent years, more women chose to study Law while more men were enrolled in Humanities, Religion and Theology, Medicine and related subjects.

## Indicator 2.6 Ratio of Women to Men in ICT Occupations

Ratio of women to men in ICT occupations indicates the degree of access and participation of men and women in ICT sector, which is the fast-growing and significant driving force of the economy.

## Definition

Women and men 15 years and over in ICT occupations, categorized into high-skilled group and low-skilled group

Calculation method
Number of women in ICT occupations/Number of men in ICT occupations

## Data source/dissemination

The National Statistical Office (NSO) collects data on population in ICT occupations by category of work. Data from the Labour Force Survey are used for the preparation of a report on ICT professionals and workers.

Contact Tel 02-281-0333.

## Data presented in this report

ICT professionals and workers by sex, and category of work 2003-2006, as per the BGEP/OWAFD/MSDHS's request.

## Data development plan

BGEP/OWAFD/MSDHS to seek collaboration from the NSO to process the data by sex, and category of work.

## ICT occupations

In 2006, ratio of women to men in ICT occupations was very low at 0.12. In the high-skilled group, largely those in computer and computer-related works, the ratio was 0.51 . In the low-skilled group, largely electrical and electronic equipment mechanics and fitters, the ratio was 0.02.

## Indicator 2.7 Computer Literacy Rate among Population 6 Years and over

Computer literacy rate shows the level of access to and use of computer by population in various areas of the country. Computer has become a very crucial learning, occupational, and communication tools. Computer illiteracy may be due to the lack of infrastructure (electricity), socio-economic constraints, or the lack of awareness and learning opportunity.

## Definition

Population 6 years and over having used computer.

## Calculation method

Computer literacy rate among population 6 years and over $=$ Population 6 years and over having used computer/Population 6 years and over X 100

Data source/dissemination
The National Statistical Office conducted the first ICT(Household) Survey in 2001. Starting in 2003, the ICT survey was conducted in parallel with the Labour Force Survey (LFS), except in 2005 when the ICT survey was conducted separately to accommodate additional questions. In 2006, the ICT survey was attached to the LFS, 3rd quarter.

Data presented in the report
Computer literacy rate among population 6 years and over by sex, administrative area, and region 2005-2006.

## Data development plan -

## Computer literacy rate

Computer literacy rate among population 6 years and over was only $25.9 \%$ in 2006. Men and women had equal access to and use of computer in every region, except for the South where women fared better than men. But the urban-rural gap was noticeably large.

## Data presented in this report

Internet literacy rate among population 6 years and over by sex, administrative area, and region 2005-2006.

Data development plan -

## Internet literacy rate

Population 6 years and over having used internet increased from 12\% to 14.2\% during 2005-2006. Women had higher literacy rate than men in every region except for Bangkok where men's rate was slightly higher. Urban population had higher literacy rate than rural population.

## Indicator 2.9 ICT Literacy Rate among Population 15-25 Years Old

## 1) Computer Literacy Rate among Population 15-25 Years Old

Computer literacy is specially important for the youth as they prepare themselves for higher education or the job market.

## Definition

Population 15-24 years old having used computer.

Calculation method
Computer literacy rate among population 15-24 years old $=$ Population 15-24 years old having used computer/Population 15-24 years old X 100

## Data source/dissemination

The National Statistical Office conducted the first ICT (Household) Survey in 2001. Starting in 2003, the ICT survey was attached to the Labour Force Survey (LFS), except in 2005 when the ICT survey was conducted separately to accommodate additional questions. In 2006, the ICT survey was attached to the LFS, 3rd quarter.

Data presented in this report Computer literacy rate among population 15-24 years old by sex, administrative area, and region 2005-2006.

## Data development plan -

## Youth computer literacy

Population 15-24 years old having computer skills was $48.9 \%$ and $50.4 \%$ in 2005 and 2006, respectively. Women posed higher computer literacy rate than men throughout the country. The rate was highest among the Bangkok youth. In the South, more women than men used computer. In every region, computer was more extensively used among urban youth, compared with their rural peers.

## Indicator 2.10 Literacy Rate among Population 15-24 Years Old

Literacy rate among population 15-24 years old indicates the potential for learning and selfdevelopment of the youth as they are becoming an important part of the national workforce.

## Definition

Literacy means the ability to read and write any language, not necessarily Thai.

## Calculation method

Literacy rate among population 15-24 years old = Population 15-24 years old having the ability to read and write any language/Population $15-24$ years old X 100

## Data source/dissemination

The National Statistical Office (NSO) conducts the Population and Housing Census every 10 years to collect data on population and their households. The 2000 Census was the 10th population census and the 4th housing census. Data were collected during April 2000.

The NSO conducts the Survey of Population Change (SPC) every 10 years at mid point between the two population censuses to update the data on births, deaths, and changes of population characteristics. The 2005-2006 SPC was conducted between July 2005 and July 2006.

## Data presented in this report

Literacy rate among population 15-24 years old by sex, administrative area, and region 2000 and 2005.

## Data development plan -

## Youth literacy rate

Literacy rate of population 15-24 years old was very high at 98.1\% In general, women's rate was slightly behind men's, but the gap was minuscule. There was no significant difference between urban and rural population. The North was, however, lagging behind other regions, and the gender gap was largest there. On the contrary, Southern women had higher literacy rate than men.

## Indicator 2.11 Literacy Rate among Population 40 Years and over

Thais, especially the youth, have attained high literacy rate, as a result of the expansion of mandatory education and non-formal education to reach out to those who did not attend school during their childhood. Still, some population groups especially those over 40 years old may not be able to overcome the barriers, and have to face formidable challenges in self-improvement, working, taking care of one's family, and entering into contractual agreements.

## Definition

Literacy means the ability to read and write any language, not necessarily Thai.

## Calculation method

Literacy rate among population 40 years and over = Population 40 years and over having the ability to read and write any language/Population 40 years and over X 100

## Data source/dissemination

The National Statistical Office (NSO) conducts the Population and Housing Census every 10 years to collect data on population and their households. The 2000 Census was the 10th population census and the 4th housing census. Data were collected during April 2000.

The NSO conducts the Survey of Population Change (SPC) every 10 years at mid point between the two population censuses to update the data on births, deaths, and changes of population characteristics. The 2005-2006 SPC was conducted between July 2005 and July 2006.

## Data presented in this report

Literacy rate among population 40 years and over by sex, administrative area, and region 2000 and 2005.

Data development plan -

## Literacy rate among population 40 years and over

Population 40 years and over had $88.7 \%$ literacy rate. The rate was relatively low in the North and the South. The gender gap was more prominent than the urban-rural gap, and the largest gap was in the North and the South.

## Indicator 2.12 Literacy Rate among Population 15 years and over

This is commonly referred to as literacy of the workforce - one of the basic indicators of the quality of the workforce.

## Definition

Literacy means the ability to read and write any language, not necessarily Thai.

## Calculation method

Literacy among population 15 years and over = Population 15 years and over having the ability to read and write any language/Population 15 years and over X 100

## Occupational training

Ratio of women to men in the Ministry of Labour's job training and skills development training increased from 0.72 in 2002 to 0.94 in 2006. The increase was most outstanding in the North and the Northeast. The number of women participating in training organized by the Ministry of Social Development and Human Security's Protection and Occupation Centers increased during 20022004, but declined in 2005.

## Indicator 2.14 Proportion of Population 6 Years and over with Reading Habit

Reading is very important for life-long learning, and is the fundamental basis for self-development for all population groups. Population with reading habit is a prerequisite for a knowledge-based society.

## Definition

Reading means all kinds of reading, including text books and on-line reading.

## Calculation method

Proportion of population 6 years and over with reading habit = Population 6 years and over with reading habit/Population 6 years and over X 100

## Data source/dissemination

The National Statistical Office conducts the first Reading Behaviour of the Population Survey in 2003 in response to the Government's policy to promote reading in all population groups. The second survey was conducted in May 2005 to collect data on readers and non-readers, their reading behaviour, and reason for not reading.

Contact Tel. 02-281-0333

## Data presented in this report

 Population 6 years and over with reading habit by sex, age group, and administrative area 2005
## Data development plan -

## Reading habit among population 6 years and over

Among the 59.2 million population aged 6 years and over, 40.9 millions or $69.1 \%$ were readers. $71.6 \%$ of men read, compared with $66.7 \%$ among women. In the 6-29 years old age group, women read more or as much as men. But after the age of 30, men surpassed women in both urban and rural areas.

Population 6 years and over with reading habit by sex, age group, and administrative area, 2005

## 3 Women and Health

## Indicator 3.1 Life Expectancy at Birth

Life expectancy at birth is an overall indicator of health. Progress in medicine and healthcare and the public's awareness about healthy living has extended life expectancy of peoples around the world. Women generally live longer than men who face more health risks during their youth. But longevity also means health problems during old ages for women. Menopause, for example, comes with many health problems. The elderly are also economically and socially vulnerable and need special attention and care.

## Definition

Number of years that an average newborn is expected to live.

## Calculation method

Adjust death data from the death certificates with missing data from the National Statistical Office (NSO)' s Survey of Population Change (SPC) to calculate the death rate, and the vital statistics.

## Data source/dissemination

Institute of Population and Social Research (IPSR), Mahidol University produces the estimation based on data from the Population and Housing Census, conducted every 10 years, the latest in 2000, and the SPC conducted every 10 years, the latest in 2005, data from the Bureau of Registration Administration, Department of Provincial Administration, Ministry of Interior, health statistics of the Bureau of Policy and Strategy, Office of the Permanent Secretary, Ministry of Public Health, and other IPSR's data.

IPSR produced a 20-25 year estimation, disaggregated by sex, and region. Data are updated and disseminated in the "Population Gazette, Mahidol University" issued every January.

Data are available at http://www.ipsr.mahidol.ac.th/gazetteth.htm.

## Data presented in this report

Life expectancy at birth from Thailand's Population Projection 2000-2025, Health Systems Research Institute and the IPSR (January 2003) by sex and region, 2000, 2005, 2010, 2015, 2020, 2025.

## Data development plan -

## Life expectancy at birth

Thai people live longer. The extended life expectancy at birth represents one of Thailand's healthcare achievement. Women live longer than men. In 2005, life expectancy at birth for women was 75.4 years, 7 years longer than men's, due to biological factors and life styles. The Southerners live longer than people in other regions. The Northerners had the shortest life span.

## Indicator 3.2 Proportion of Pregnant Women Receiving Standard Check-ups

Regular pregnancy check-up is an important health promotion measure that reduces pregnancy and birth complications, maternal mortality, as well as enhances the likelihood of a safe delivery and a healthy baby.

## Definition

Standard pregnancy check-ups consist of 4 check-ups during the following periods:

1) 1 st -27 th week (preferably before the 12th week)
2) $28 \mathrm{th}-31$ st week
3) 32nd - 35th week
4) 36th - 39th week

Technical term for this indicator is "Rate of Completed Antenatal Care".

## Calculation method

Proportion of pregnant women receiving standard check-ups = Number of pregnant women receiving standard check-ups/Number of women giving births X 100

## Data source/dissemination

The Maternal and Child Health Group, Bureau of Health Promotion, Department of Health (DoH) received reports from the Ministry of Public Health (MoPH)'s facilities in 75 provinces.

Data did not include private facilities, but included part of Bangkok facilities, disseminated in the Report on Maternal and Pre-Natal Healthcare. The 3 latest issues cover the 1997-2001, 2001-2003, 2004-2005 periods. (Until 2003, DoH included Ratchaburi,Kanchanaburi, Nakhon Pathom, Samut Sakhon, Samut Songkhram, Phetchaburi and Prachuab Kiri Khan in the Southern Region. Starting 2004, these provinces are classified as part of the Central Region as per the National Statistical Office (NSO)'s regional classification system)

Starting in 2005, the Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH is responsible for processing data that the Provincial Health Offices send to the MoPH's Health Database System (excluding data on private hospitals). The web-based database system presents the most-up-to-dated data at the national and provincial levels (no regional data) at http://healthdata.moph.go.th Contact Tel. 02-590-1495.

Data from both sources are based on fiscal years.

## Data presented in this report

Pregnant women receiving standard check-ups by region 2002-2005 from the Maternal and Child Health Group, Bureau of Health Promotion, DoH, (Regional classification as per the DoH's regional classification system).

Pregnant women receiving standard check-ups by region, and province 2006, processed and calculated from data from the Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH (Regional classification as per the NSO's regional classification system).

Data development plan
BGEP/OWAFD/MSDHS to download the data from http://healthdata.moph.go.th in the last quarter of the calendar year and process the data into indicator at national, regional and provincial levels.

## Standard pregnancy check-ups

Pregnant women receiving standard check-ups increased from 73.2\% to 88.7\% during 2002-2005, and $92.53 \%$ in $2006 .{ }^{1}$ The best coverage was in the Northeast. The 2006 data suggests that the Southern Region needs special attention.

In 2006, pregnancy check-ups were most extensive in Chai Nat (99.97), Ang Thong (99.79), Yasothon (99.54), Samut Prakan (99.30), Singburi (99.14).

Provinces with the smallest coverage were Loei (64.73), Nakhon Si Thammarat (72.40), Mae Hong Son (81.30), Prachuab Khiri Khan (83.68), and Kampaeng Phet (83.87).

Proportion of pregnant women receiving standard check-ups, 2006

## Indicator 3.3 Proportion of Births Attended by Health Personnel

Having birth delivery attended by health personnel is an important indicator of maternal and child health situation. In the past, many women died during the delivery.

## Definition

Health personnel includes physician, nurse, and obstetrician.
A live birth occurs when a fetus, whatever its gestational age, exits the maternal body and subsequently shows any sign of life, such as voluntary movement, heartbeat, or pulsation of the umbilical cord, for however brief a time and regardless of whether the umbilical cord or placenta are intact.

## Calculation method

Proportion of births attended by health personnel = Number of pregnant women giving births attended by health personnel/Number of live births X 100

Health Information Center, Bureau of Policy and Strategy, Office of the Permanent Secretary, Ministry of Public Health (MoPH) does not collect data on number of women giving birth, and use number of live births as proxy.

## Data source/dissemination

Maternal and Child Health Group, Bureau of Health Promotion, Department of Health $(\mathrm{DoH}), \mathrm{MoPH}$, received reports from the MoPH's health's facilities in 75 provinces.

Data did not include private facilities, but included some Bangkok facilities, disseminated in the Report on Maternal and Pre-Natal Healthcare. The 3 latest issues cover the 1997-2001, 2001-2003, 2004-2005 periods. (Until 2003, DoH included Ratchaburi, Kanchanaburi, Nakhon Pathom, Samut Sakhon, Samut Songkhram, Phetchaburi and Prachuab Kiri Khan in the Southern Region. Starting 2004, these provinces are classified as part of the Central Region as per the National Statistical Office's regional classification system).

At present, the Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH is responsible for processing 1) number of births by type of attendant, 2) number of live births from birth certificates, Bureau of Registration Administration, Department of Provincial Administration, Ministry of Interior. Data are available at the MoPH's Health Database System, but are not used to calculate this indicator. Contact Tel 02-590-1491

Data presented in this report
Births attended by health personnel by region 2002-2006, by province 2006 (processed and calculated from data from the Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH)

## Data development plan

BGEP/OWAFD/MSDHS to obtain data from the Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH for processing and calculating national, regional and provincial indicators.

## Birth attendance

During 2002-2006, the number of births attended by health personnel increased from $93.8 \%$ to $97.2 \%$. The upward trend was observed in all regions although the North and the South still had lower rates than others at $93.7 \%$ and $95.6 \%$ respectively. The Department of Health has placed an emphasis on quality improvement by training health personnel to observe and analyze signs of possible complications and to implement appropriate preventive measures.

Provinces with the highest attendance rates were Samut Prakan and Phuket (99.90) Nonthaburi (99.87) Saraburi (99.81) Nakhon Pathom and Ang Thong (99.72) Ayutthaya (99.71).

Provinces with the lowest attendance rate were Tak (65.66), Mae Hong Son (75.38), Narathiwat (84.17), Pattani (85.56) and Yala (88.23).

## Indicator 3.4 Maternal Mortality Rate

Maternal mortality is a very important indicator of women's health. Although maternal mortality has dropped over the years, it is still high in some areas. Responsible agencies are focusing on improving the quality of maternal care by upgrading the capacity of health personnel so that they can detect signs of complication early on.

## Definition

Maternal mortality means the death of a pregnant woman or within 42 days after the end of the pregnancy, regardless of the age of pregnancy, from causes relevant to or induced/exacerbated by the pregnancy or birth delivery, excluding accidents and factors pertinent to the conception.

A live birth occurs when a fetus, whatever its gestational age, exits the maternal body and subsequently shows any sign of life, such as voluntary movement, heartbeat, or pulsation of the umbilical cord, for however brief a time and regardless of whether the umbilical cord or placenta are intact.

Calculation method
Maternal mortality rate $=$ Number of maternal deaths/Number of live births in the same year X 100,000

## Data source/dissemination

There were 2 important data sources.
1.) The Maternal and Child Health Group, Bureau of Health Promotion, Department of Health, Ministry of Public Health (MoPH) processed data from the MoPH's health facilities in 75 provinces.
2.) The Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH processes data from death certificates by region, and province. Data from death certificates are under the responsibility of the Bureau of Registration Administration, Department of Provincial Administration, Ministry of Interior.

The Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH is now the responsible agency. Data are presented by region, and province in "Maternal Mortality Statistics" at http://203.157.19.19. Regional data are also presented in the Annual Report on Health Statistics. Contact Tel. 02-590-1491

## Data presented in this report

Maternal mortality rate by region 2002-2006, by province 2006 (processed and calculated from data from the Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH).

Data development plan -

## Maternal mortality

During 2002-2006, maternal mortality dropped from 13.5 to 11.7 per 100,000 live births. The Central Region and the Northeastern Region witnessed an increase, which may be due to an improvement in autopsy and death diagnosis and reporting system. Although the trend showed a positive sign in the South, maternal mortality was noticeably higher there than in other regions; it was 18.7 per 100,000 live births in 2006.

In 2006, provinces with the highest maternal mortality rates were Pattani (50.99), Tak (49.50), Yala (49.16), Satun (43.52), and Ang Thong (35.09).

No maternal death was reported in 12, 10, 8, and 6 provinces in the Central Region, the North, the Northeast, and the South, respectively.

## Indicator 3.5 Abortion Rate

Women have an abortion for different reasons, e.g. family, socio-economic problems, birth control failure, etc. In most cases, abortions take place in private clinics and carry a high risk of infection, or even a loss of life. Data collection is extremely difficult. There are no systematic up-to-date data, which makes it difficult to develop appropriate policies and measures.

## Definition

## Calculation method

## Data source/dissemination

No government agency is responsible for collecting these data.

In 1999, the Family and Population Planning Division, Department of Health (DoH), Ministry of Public Health (MoPH), with the support of the World Health Organization, conducted a Survey on Abortions in Thailand. Samples included women seeking treatment from complications related to abortion in 787 public hospitals throughout the year. The survey included 45,990 samples, of which $28.5 \%$ were abortion cases. The abortion rate was 19.54 per 1,000 live births. $46.8 \%$ of the samples were 24 years and under, and $30 \%$ were under 20 years of age. Average age of pregnancy at termination was 13.01 weeks, which was a dangerous period. $60.2 \%$ aborted their pregnancy due to socio-economic reasons, $39.8 \%$ due to medical reasons.

At present, the Reproductive Health Division, DoH, MoPH is not responsible for data collection, and does not have any plan to conduct another survey.

## Data presented in this report

## Data development plan

It is difficult to collect data from a survey or administrative records. Other alternatives should be considered.

## Indicator 3.6 Birth Control Rate

Birth control plays an important role in improving the quality of life for women and the family. But this responsibility falls largely on women.

## Definition

Married women 15-49 years old practicing birth control by various methods including condom and male sterilization (The National Statistical Office (NSO)'s definition in the Reproductive Health Survey).

Married women 13-50 years old practicing birth control by various methods including condom and male sterilization (The NSO's definition in the Survey of Population Change).

## Calculation method

Proportion of women practicing birth control = Number of married women 15-49 years old practicing birth control/Number of married women 15-49 years old X 100

## Data source/dissemination

There are 3 data sources.
1.) Survey of Population Change, conducted every 10 years by the NSO, presenting data by age group, administrative area, and region. The latest survey was in 2005.
2.) Reproductive Health Survey, conducted every 10 years by the NSO, presenting data by age group, administrative area, and region. The latest survey was in 2006.

In both cases, data are presented in the survey reports and at www.nso.go.th Contact Tel 02-281-0333.
3.) Reproductive Health Division, Department of Health, Ministry of Public Health, presenting data at national level, with no administrative area, regional or provincial breakdowns. Latest data are from an evaluation project on the reproductive health standards of the Thai people 2006. At present the Reproductive Health Division does not have any plan to collect these data and will use data from research and other surveys.

## Data presented in this report

Women practicing birth control by administrative area, region and contraceptive method 2006. Data are from NSO's Reproductive Health Survey 2006, queried by the NSO programme to show disaggregation by administrative area, region, and contraceptive method.

Data development plan
BGEP/OWAFD/MSDHS to use the NSO data query programme to disaggregate data from the Reproductive Health Survey by administrative area, region, and contraceptive method.

## Birth control

81.1 of married women in reproductive ages practiced birth control. In most regions, the contraception rate was quite similar in both urban and rural areas. But the South recorded a very low rate of $69.7 \%$; urban women practiced birth control more than rural women.

Most popular contraceptive methods were oral pills, female sterilization, and injection at 45.3\%, $32.8 \%$, and $15.2 \%$, respectively. Male sterilization accounted for only $1.1 \%$.

## Indicator 3.7 Women's Smoking Rate

Smoking is one of the most significant health risks. Smoking during pregnancy also has negative impacts on the baby. These data are useful for planning and evaluating tobacco-control measures.

```
Definition
    Female smokers mean women 11 years and over who smoke regularly, or
    occasionally.
```

## Calculation method

```
Women's smoking rate = Number of women 11 years and over who smoke regularly or occasionally/ Number of women 11 years and over X 100
```

## Data source/dissemination

```
The National Statistical Office (NSO) has conducted the Health and Welfare Survey since 1974. The survey was initially conducted every year until 1978. During 1981-2001, the survey was conducted every 5 years. To monitor the impact of the universal health programme, Ministry of Public Health asked the NSO to conduct the survey every year during 2003-2007. Data were collected during January-June
The NSO conducted the Survey on Smoking Behavior of the Thai People for the first time in 1976 by attaching the questionnaire to the Health and Welfare Survey. The Cigarette Smoking and Alcoholic Drinking Behaviour Survey in 2004 was the 11th round. Data were collected in April.
Contact Tel 02-281-0333.
```

## Data presented in this report

Smoking behavior by sex, administrative area, and region 2004 and 2006.

Data development plan -

## Smoking among women

Smoking among population 11 years and over dropped from $21.1 \%$ in 2004 to $20.3 \%$ in 2006. But women's smoking rate rose from $2.4 \%$ in 2004 to $2.6 \%$ in 2006 . The increase took place in both urban and rural areas, and in all regions except the Central and Northern Regions. Men's smoking rate dropped from $40.1 \%$ in 2004 to $38.8 \%$ in 2006. The decline was observed in both urban and rural areas, and in every region except for Bangkok.

In 2006, women started smoking at an average age of 23 , compared with men who started at the age of 18 .

Smoking among population 11 years and over

## Indicator 3.8 Women's Alcohol Consumption Rate

Alcohol consumption is another major health risk, and is also responsible for a large part of family, community and social maladies. Data on alcohol consumption among women are important for planning effective control measures.

Definition
Female alcohol consumers mean women 11 years and over who consume alcohol every day, regularly (3-4 times per week), occasionally (1-2 times per week), 1-2 times per month, or once in a while.

## Calculation method

Women's alcohol consumption rate = Number of women 11 years and over who consume alcohol (regardless of frequency)/ Number of women 11 years and over X 100

## Data source/dissemination

The National Statistical Office (NSO) has conducted the Health and Welfare Survey since 1974. The survey was initially conducted every year until 1978. During 1981-2001, the survey was conducted every 5 years. To monitor the impact of the universal health programme, Ministry of Public Health asked the NSO to conduct the survey every year during 2003-2007. Data were collected during January-June.

The Cigarette Smoking and Alcoholic Drinking Behaviour Survey in 2004 collected data on alcohol drinking behaviour, drunk driving and the public's awareness on related penalties.

## Data presented in this report

Alcohol consumption behaviours by sex, administrative area, and region 2004 and 2006.

## Data development plan -

## Alcohol consumption among women

During 2004-2006, the proportion of alcohol-drinking population expanded from $27.2 \%$ to $29.2 \%$ The increase was $45.8 \%$ to $50.5 \%$ among men; the increase was observed in every area and region. More women, especially those in the urban areas, became alcohol consumers. Women's alcohol consumption rate increased from $8.9 \%$ to $9.1 \%$ during 2004-2006. The increase was most prominent among the youth - the 15-24 years old age group.

## Indicator 3.9 HIV Prevalence among Pregnant Women

When pregnant women are infected by HIV, the impact can be life-threatening for the mother and/ or the baby, or it can be long-termed, as HIV-infected babies need special care and are likely to face several health and socio-economic problems when they grow up. It is important that women and men are aware of the significance of safe sex and women's reproductive rights, as well as mitigation measures, e.g. preventing the mother-to-child transmission.

## Definition

Pregnant women tested positive for HIV.

## Calculation method

HIV prevalence among pregnant women = Number of pregnant women tested HIV positive/Number of pregnant women tested for HIV X 100

At the national and regional levels, HIV prevalence rate refers to the median value of the regions and the provinces, respectively. At the province level, HIV prevalence rate refers to the average value.

Data source/dissemination
The AIDS, TB and STIs Epidemiology Group, the Epidemiology Division, Department of Disease Control, Ministry of Public Health (MoPH) has conducted HIV surveillance survey among 7 high-risk groups including pregnant women every June since 1989. (Prior to 1995, there were 2 rounds each year, one in June, the other in December). The survey covers pregnant women who visit the MoPH's health facilities.

The AIDS, TB and STIs Epidemiology Group, the Epidemiology Division, Department of Disease Control, MoPH disseminates data by region, and province through printed materials and at http://203.157.15.12/centeraids/sero-surveillance.php Contact Tel 02-590-1887

## Data presented in this report

HIV prevalence among pregnant women by region 2002-2006, by province 2006.

Data development plan -

## HIV prevalence among pregnant women

HIV prevalence among pregnant women dropped from $1.39 \%$ in 2002 to $0.87 \%$ in 2006. The Central Region was the only area where the rate was higher than $1 \%$, followed by the South at $0.83 \%$. Other regions recorded an improvement over the years.

Provinces with the highest prevalence rates were Rayong (2.42), Singburi (2.29), Tak (1.86), Samut Prakan (1.57), Saraburi and Trat (1.53)

Provinces with the lowest prevalence rates were Nakhon Nayok, Lampang, Mukdahan, Amnat Charoen (0.0), Mae Hong Son (0.19), Chai Nat (0.20), Nong Bua Lam Phu (0.26), Yala (0.29).

## Indicator 3.10 HIV Prevalence among Women in Reproductive

 AgesHIV infection among women in reproductive ages means unsafe sex. Lack of self-protection may be due to ignorance, and inability to practice safe sex, etc. The underlying issue is the lack of awareness of sexual rights and women's right to self-protection that includes refusing unwanted or unsafe sex.

## Definition

Women in reproductive ages tested positive for HIV.

## Calculation method

HIV prevalence among women in reproductive ages = Number of women in reproductive ages tested HIV positive/Number of women in reproductive ages tested for HIV X 100

Data source/dissemination
No agency is responsible for producing these data.

Data presented in this report

Data development plan
No clear development plan as data are difficult to obtain through survey or administrative records.

## Indicator 3.11 Illness Rate

Illness rate is an overall indicator of the health situation of the population. It has direct impacts on the quality of life. Illness constitutes an important obstacle for anyone wanting to lead a productive life. To some extent, it has impacts on the individual and household income. At a macro level, it reduces the national purchasing power.

## Definition

Population reported ill or not feeling well during a period of one month prior to the interview.

## Calculation method

Illness rate = Population reported ill or not feeling well/Population X 100

## Data source/dissemination

The National Statistical Office (NSO) has conducted the Health and Welfare Survey since 1974. The survey was initially conducted every year until 1978. During 1981-2001, the survey was conducted every 5 years. To monitor the impact of the universal health programme, Ministry of Public Health asked the NSO to conduct the survey every year during 2003-2007. The 2005 and 2006 surveys were the 13th and 14th rounds. Data were collected during January-June.

## Data presented in this report

Population reported ill or not feeling well by sex, administrative area, and region 2005 and 2006

Data development plan -

## Illness rate

Population reported ill or not feeling well dropped from $19.7 \%$ in 2005 to $16.3 \%$ in 2006. Women's illness also dropped from $21.7 \%$ to $18.1 \%$ In general, women's illness rate was higher than men. Illness also affected rural population more than the urban population. Both women and men in the North had higher rates than other regions.

These data show that men are healthier than women. But women live longer. It should be noted that the illness rate is based on self-report. Different population groups in different areas may have different perceptions on and different inclinations to report an illness.

## Indicator 3.12 Proportion of the Elderly and Elderly Living Alone

Thailand is becoming an ageing society. Women constitute a larger share of the elderly as they outlive men. The Thai society is also shifting toward a nucleus household. Rural people have to migrate for work in the city, leaving their elderly to live by themselves. Data on the elderly, their way of life, their needs are important for planning and implementing appropriate social programmes.

## Definition

Elderly means man or woman 60 years and over.
Elderly living alone means man or woman who is the only member of the household.

## Calculation method

Proportion of elderly women (or elderly men) = Number of women 60 years and over (or men 60 years and over)/Population 60 years and over X 100

Proportion of elderly women (or elderly men) living alone = Number of women 60 years and over (or men 60 years and over) living alone /Population 60 years and over living alone X 100

## Data source/dissemination

The National Statistical Office conducted the first Survey of the Elderly in 1994, the second in 2002. Data collection was during April-June. (The survey covers population 50 years and over, but elderly refers to population 60 years and over).

Contact Tel. 02-281-0333

## Data presented in this report

Elderly and elderly living along by sex, administrative area, and region 2002

## Data development plan -

## The elderly and elderly living alone

Thailand is famous for its success in family planning. Birth rate has steadily dropped. Medical technology also extends lives, curtails the death rate. As a consequence, Thai people live longer and the proportion of elderly in the population has steadily increased, paving a way for an ageing society in which ageing population accounts for $10 \%$ or more of the total population.

In 2002, out of 63.39 millions, the elderly accounted for $9.4 \%$ or 5.97 millions, 2.73 million men and 3.24 million women. Elderly women outnumbered men in all areas and regions, and a larger number lived alone.

During 2003-2006, elderly women increased from $10.8 \%$ to $11.6 \%$ of the female population, while men's proportion rose from $9.1 \%$ to $9.6 \%$. Health problems and the ability to take care for themselves are becoming a problem for elderly women. ${ }^{2}$

## Indicator 3.13 Population with Disability

Disability has a profound impact on one's health and socio-economic conditions. People with disability have difficulty doing their daily routine. Most find it an uphill battle making a living. They need support from the community and the society.

## Definition

Disability is classified into 5 groups (including 31 deficiencies)

1. Visual impairment
2. Hearing impairment or inability to communicate with other people
3. Physical impairment
4. Psychological impairment
5. Mental impairment

Chronic illness refers to health problem that cannot be cured during a period of 6 months.
Despite some improvement, the problem may recur periodically.
Handicap or immobility means conditions of constraints or inability to perform normal daily routine due to health problem or chronic illness that spans over 6 months or disability.

## Calculation method

Population (or women or men) with disability = Number of population (or women or men) with disability/Population (or female population or male population) X 100

Data source/ dissemination
The National Statistical Office (NSO) included questions on disability as part of the Health and Welfare Survey in 1984. After the 10th round in 2001, the NSO conducted the first Disability and Handicap Survey in 2002, and the second in 2007. In 2007, the survey was changed to Disabled Person Survey. Data were collected in January, February and March.

Data presented in this report
Population with disability by sex, administrative area, and region 2002

## Data development plan -

## Population with disability

In 2002, out of the total population of 63.3 million, 1.098 million or $1.7 \%$ had some disabilities. Men outnumbered women. There were 0.553 million men ( $50.4 \%$ ) with disability, compared with 0.545 million women (49.6\%). The disability rate was $1.8 \%$ for men and $1.7 \%$ for women, $2.1 \%$ for rural population, $1.0 \%$ for urban population. The rate was highest in the Northeast at $2.4 \%$, followed by the South and the North at $1.9 \%$ and $1.8 \%$, respectively.

## 4. Violence Against Women

## Indicator 4.1 Number of Women Shelters

Women and children who are victims of assaults and abuses need counseling, temporary accommodation, physical and emotional assistance, and legal help. Women shelters in the provinces have multi-disciplinary teams to provide a range of assistance. They are also responsible for taking reports, collecting data and coordinate with relevant agencies.

| Definition | Women shelters mean temporary shelters for women and children who are subject to domestic violence. <br> The One Stop Crisis Centers - OSCCs are set up in health facilities under the Ministry of Public Health (MoPH) and other agencies including the Bangkok Metropolitan Authority. Each OSCC has a multi-disciplinary team to provide assistance to women and children who are victims of violence. |  |  |

## Indicator 4.2 Number of Women and Children Victimized by Domestic Violence

Domestic violence, husband abusing wife, parent abusing children, is a manifestation of social problems especially gender relations. An underlying cause is the misperception about the control of men over women, the stronger over the weak. These data should indicate the severity of this problem, stimulate the awareness and lead to reasonable solutions. The Protection Against Family Violence Act 2007 went into force on 12 November 2007. It aims to prevent and protect victims of domestic violence and penalize the offenders.

| Definition | Women and children victimized by domestic violence who seek assistance at the OSCCs, NGOs, the Emergency Home, and other women shelters. |  |  |  |  |

## Women and children victimized by domestic violence

In 2006, more women and children fell victims to domestic violence. The requests for assistance at the One-Stop-Crisis Centers (OSCCs) doubled from 2004 (an average of 39 requests compared with 19 requests per day). Number of women and children seeking assistance at the Ministry of Social Development and Human Security's shelters and assistance centers also increased from 469 in 2004 to 837 in 2006, largely due to cases of sexual violence.

At present, it is difficult to assess the situation from the number of women and children seeking assistance from NGOs. Women seeking temporary shelter at the Emergency Home has dropped. Meanwhile, the Reproductive Health Survey 2006 reported that over one million married women had been physically or emotionally abused over a period of one month.

Number of women and children seeking assistance from the OSCCs

Number of married women 15-49 years old having been physically or emotionally abused

Number of women and children victimized by physical, emotional and sexual abuse seeking assistance from women shelters

## Indicator 4.3 Incidence of Sexual Violence against Women

Most cases of sexual violence against women are committed by acquaints. In many cases, women do not report the incidences. They may not seek medical treatment. It is therefore difficult to collect data to reflect the real situation. A systematic data collection is important for policy planning to protect and rehabilitate the victims and pursue legal actions against the offenders.

## Definition

Number of women victimized by sexual violence seeking treatment at the emergency room of large-scale hospitals that are members of the Violence-related Injury Surveillance network (VIS).

Data source/dissemination
28 large-scale hospitals in the regions and Bangkok Metropolis that are members of the VIS collect data on patients seeking treatment at the emergency room. Data are centrally processed and are not classified by type of violence. It is therefore not possible to identify cases of sexual violence.

Data presented in this report

Data development plan
BGEP/OWAFD/MSDHS to seek collaboration from the Epidemiology Division, Department of Health, Ministry of Public Health to classify the data by type of violence.

## Indicator 4.4 Number of Court Cases Related to Sexual Violence against Women

Cases related to rape as per Sections 276, 277, 277/bis., 277/ter., 278-285 of the Criminal Codes indicate the level of violence against women and the inequality between women and men - the issue that needs to be urgently addressed.

## Definition

Number of closed court cases related to rape and other violations as per Sections 276, 277, 277bis., 277ter., 278-285. The courts involved are the Criminal Courts and the Juvenile and Family Courts all over the country.

## Data source/dissemination

Data System and Statistics Section, Office of the Planning and Budget, the Judiciary of Thailand collects data from various courts throughout the country.

Data are centrally processed and are available at www.judiciary.go.th and in the Report on Statistics on Court Cases in Thailand, 2001-2006.

Contact Tel. 02-541-2284-91

## Data presented in this report

Number of closed court cases related to rape and other violations as per Sections 276, 277, 277bis., 277ter., 278-285, 2002-2006.

Data development plan
BGEP/OWAFD/MSDHS to ask the Royal Thai Police for statistics on sexual violence reported and sexual violence arrested, to compare with closed court cases related to sexual violence against women.

## Rape and other sexual violence against women

Closed cases related to rape and other sexual violence against women rose steadily from 4,896 to 9,653 during 2002-2006.

## Indicator 4.5 Number of Court Cases Related to Prostitution

Closed court cases as per the Prevention and Suppression of Prostitution Act 1996 constitute a fraction of the cases reported to the police or cases filed at the court. A systematic database that links all these data is needed to support an improvement of the legal and judicial system.

## Definition

Number of closed court cases as per the Prevention and Suppression of Prostitution Act 1996. The courts involved are the Criminal Courts, the Juvenile and Family Courts all over the country.

## Data source/dissemination

Data System and Statistics Section, Office of the Planning and Budget, the Judiciary of Thailand collects the data. The 2002 data system did not distinguish prostitution from other sexual offenses. It was in 2003 that data on "prostitution" cases were separated from other sexual offenses.

Data are available at www.judiciary.go.th and in the Report on Statistics on Court Cases in Thailand as per the Prevention and Suppression of Prostitution Act 1996, 2003-2006

Contact Tel. 02-541-2284-91

## Data presented in this report

## Indicator 4.6 Number of Court Cases on Human Trafficking

Prosecution plays an important role in the prevention of human trafficking. But the Draft Bill on Prevention and Suppression of Human Trafficking that aims to expand and improve the effectiveness of the Prevention and Suppression of Women and Children Trafficking Act 1997 to include human trafficking, e.g. labour trafficking has not been enacted. Therefore there has not been any court case.

## Definition <br> Number of closed court cases related to human trafficking

Data source/dissemination

Data presented in this report
-

Data development plan
BGEP/OWAFD/MSDHS to seek collaboration on the data from the Bureau of AntiTrafficking in Women and Children, Department of Social Development and Welfare, The Royal Thai Police to monitor the progress of the draft bill and its implementation upon enactment.

## Indicator 4.7 Number of Women and Children Seeking Assistance from Women Shelters

Women and children who have been exploited by prostitution and human trafficking need various types of assistance for their physical and emotional rehabilitation, Welfare support, occupational training, legal counseling are among important measure to help the women and children return to normal and productive lives.

## Definition

Number of women and children seeking assistance from the women shelters and other types of support center to escape from prostitution as per the Prevention and Suppression of Prostitution Act 1996 and those facing other problems.

Data source/dissemination
Bureau of Anti-Trafficking in Women and Children, Department of Social Development and Welfare, MSDHS collects and processes data from various centers under its jurisdiction. Data for 2004-2006 are available by month and year, with no sex, age group disaggregation. They are presented in the annual report.

## 6. Women and the Economy

## Indicator 6.1 Proportion of Women Receiving Skills Training for Income Generation

When women receive skills training for income generation, they have a better chance for promotion and additional income. Poor and disadvantaged women have good skills can earn better living and become economically self-reliant.

## Definition

Women that receive skills training organized by the Department of Skills Development, Ministry of Labour (MoL)

Calculation method
Number of female trainees/Number of trainees X 100

## Data source/dissemination

Division of Workforce and Enterpreneur Development Promotion, Department of Skills Development, MoL collects data on participants in job training and skills development training by sex, training center, region. The 2002-2004 data feature number of trainees. The 2005-2006 data include numbers of trainees and trainees that complete the training.

Data are based on fiscal years and are presented in the annual report. Contact Tel. 02-245-5785

Data presented in this report
Number of trainees by sex, and region 2002-2006. (This set of data is a subset of indicator 2.13)

Data are recalculated as per the National Statistical Office's regional classification system (Bangkok vicinity, the West and the East are included in the Central Region)

Data development plan -

## Women's skills development training for income generation

The number of trainees in the courses organized by the Department of Skills Development declined by $35 \%$ from 161,348 to 103,846 during 2002-2006. But the proportion of women steadily increased. In 2006, women constituted $48.3 \%$ of the trainees, an increase from $41.8 \%$ in 2002. The increase took place in every region, except for the Central Region.

## Indicator 6.2 Proportion of Job Placement and Job Placement Success Rate for Women in Thailand and Abroad

Women and men should have equal access to assistance in employment counseling, job registration and job placement. In some societies, women are regarded as inferior workforce, or they face more barriers, lack access to labour market information and other institutional support.

## Definition

Women receiving employment counseling, job registration and job placement in Thailand and abroad.

## Calculation method

Proportion of women having successful job placement in Thailand = Number of women having successful job placement in Thailand/Number of people having successful job placement in Thailand X 100

Proportion of women having successful job placement abroad $=$ Number of women departing for work overseas/Number of people departing for work overseas X 100

## Data source/dissemination

Planning and Information Division, Department of Employment, Ministry of Labour (MoL)'s Yearbook of Employment Statistics. The report presents number of people registered for employment, and number of job placement by sex and region.

Contact Tel.02-245-1365

## Data presented in this report

Workers registered for work, and successful placement by sex, and region 2002-2006. Data are reclassified as per the National Statistical Office's regional classification system.

Workers departing for work overseas by sex 2003-2006.

## Data development plan -

## Job placement in Thailand and overseas

Women accounted for a larger share of job placement, and women's share increase from 52.4\% in 2002 to $59.4 \%$ in 2006, with the highest percentage in the South. The rate of successful job placement for women was, however, lower than men's in 2002-2003. Since then, women were more successful. In 2006, women's placement success rate was $43.2 \%$ compared with men's $39.8 \%$. The same pattern was observed in every region except for Bangkok.

Proportion of women departing for work abroad during 2002-2006 was approximately $15 \%$.

## Indicator 6.3 Labour Participation Rate

The workforce is an important production input. Women participation in the workforce has significant impacts on their quality of life and national socio-economic development.

## Definition

The workforce means population 15 years and over (employed, unemployed, seasonally unemployed) during the survey week.

## Calculation method

Labour participation rate = population 15 years and over who are employed, unemployed or seasonally unemployed/total population X 100
Women's labour participation rate $=$ female population 15 years and over who are employed, unemployed or seasonally unemployed/female population X 100

## Data source/dissemination

The National Statistical Office (NSO) started conducting the Labour Force Survey (LFS) in 1963. The NSO conducted the survey twice a year during 1971-1983, three times a year during 1984-1997. Starting in 1994, the sample size was expanded and the NSO began to report the result at the provincial level. During 1998-2000, the LFS was conducted quarterly.

Starting in 2001, data are collected every month, and the monthly results are averaged for a quarterly report. The 13-less than 15 years old age group dropped in accordance with the ban on child labour. Administrative areas were redefined as per changes in the local administration system in 1999.

## Indicator 6.4 Unemployment Rate

Unemployment is one of key indicators of the state of the economy and the well-being of the people.

## Definition

An unemployed means anyone 15 years and over who, during the survey week, has the following characteristics:

1) Does not work and does not have a regular job, but has looked for work or waited for job placement during the past 30 days,
2) Does not work and does not have a regular job, has not looked for work during the past 30 days, but is available for work.

## Calculation method

Unemployment rate = Population 15 years and over/The workforce 15 years and over X 100

## Data source/dissemination

## Indicator 6.5 Ratio of Women's to Men's Income from Waged Employment in Non-Agricultural Sector

In the agricultural sector, work is often shared among family members and it is difficult to distinguish between men's and women's earnings. But professionals and workers in the non-agricultural sector are individually employed and compensated. This indicator highlights the difference between women's and men's income. By law, men and women are entitled to the same pay for the same work, but women may be disadvantaged in other aspects that have an impact on the income level. For example, they may have fewer opportunities to work overtime, less chance in career advancement, etc.

## Definition

Workers in waged employment in non-agricultural sector are government, state enterprise or private sector employees.

Income includes salary, bonus, overtime, other monetary and non-monetary benefits

Calculation method
Income of women who work as government, state enterprise and private sector employees/income of men who work as government, state enterprise and private sector employees

## Indicator 6.7 Proportion of Women in the Labour Unions

A labour union represents workers' collective strength in protecting and advancing their rights and interests. Women's participation as members or executives of the labour union helps strengthen the bargaining power of the labour union as well as promote gender equality in the workplace.

## Definition

Women who are executives (members of the labour union committee) or members of the labour unions in private companies and state enterprises.

## Calculation method

Proportion of female labour union executives = Number of female labour union executives/Number of labour union executives X 100

## Data source/dissemination

The Central Register Section, Labour Relations Bureau, Department of Labour Protection and Welfare, Ministry of Labour (MoL) collects data on executives and members of labour unions in private companies and state enterprises through the Provincial Labour Offices.

Data are periodically updated and are kept as individual records; they are not aggregated or disaggregated by any criteria, and are not disseminated to the public. Contact Tel. 02-246-8993

Data presented in this report
Number of labour unions and labour union members 2005
Number of labour union executives 2005 (gender disaggregated data 2005 was available as per the Ministry of Social Development and Human Security's request).

Data development plan BGEP/OWAFD/MSDHS has sought collaboration from the Central Register Section, Labour Relations Bureau, Department of Labour Protection and Welfare, MoL for more updated data on the labour union executives. But he MoL is unable to comply due to inadequate staff, and the database system which does not support gender disaggregation.

BGEP/OWAFD/MSDHS to pursue further collaboration on this matter in the future.

## Women's participation in the labour unions

In 2005, 4,645 women were executives of the 1,399 labour unions. This represented $32 \%$ of total labour union executives. Total members of the labour unions were 311,344, but there are no gender disaggregated data.

## Indicator 6.9 Provision of Unpaid Domestic Services

## (1) Hours on unpaid household maintenance by population 10 years and over

In the Thai society, women are responsible for household maintenance. Having to spend several hours on unpaid household work, women do not have enough time for self-development.

## Definition

Household maintenance includes (1) meal preparation and house cleaning (2) cleaning and routine maintenance around the house (3) home decoration, minor repair and maintenance (4) laundry and ironing, shoe shining (5) other house works (6) taking care of pets (7) grocery shopping and related activities (8) procurement of relevant services 9) transport related to these activities (10) household management.

Hours are averaged only from those providing the service.

## Calculation method

Data calculated from the Time Use Survey conducted by the National Statistical Office (NSO).

## Data source/dissemination

The NSO conducted the first Time Use Survey in August 2001. The 2004 survey was the 2nd round, conducted in conjunction with the Labour Force Survey (LFS) in August.

Contact Tel. 02-281-0333.

## Data presented in this report

Hours on unpaid household maintenance by sex, administrative area, and region 2004.

## Data development plan -

## Women and household maintenance

Thai people spent an average of 2.3 hours per day on unpaid household maintenance. Urban people spent slightly more time than the rural people. Bangkokians spent 2.6 hours per day, which was more than people in other regions. The Northeasterners spent the least time -2.2 hours.

On average, women spent 2.7 hours per day compared with 1.5 hours by men. The largest gender gap was in the rural North where women spent 2.8 hours per day compared with 1.4 hours per day by men.

1) Hours on unpaid household maintenance by population 10 years and over by sex, administrative area, and region

## 2) Hours on unpaid care for own household members

Besides household maintenance, Thai women are also the main care givers in the family. They take care of children and the elderly. This responsibility is time-consuming and most women find it difficult to balance between taking care of others and taking care of themselves.

## Definition

Care for own household members includes taking care of children and the elderly, transport related to these activities, and other activities.

Hours are averaged only from those providing the services.

## Calculation method

Data calculated from the Time Use Survey conducted by the NSO.

## Data source/dissemination

The NSO conducted the first Time Use Survey in August 2001. The 2004 survey was the 2nd round, conducted in conjunction with the LFS in August.

## Indicator 6.10 Proportion of Non-Formal Workers

Non-formal workers are part of the productive workforce that make considerable contribution to the economy, but lack legal protection and social security. About three-fifths of the employed belong to this category. These data are therefore valuable for planning an adequate and appropriate protection and security to the Thai workforce.

## Definition

Non-formal workers or workers in non-formal sector are employed workforce that do not have social security.

## Calculation method

Proportion of non-formal workers = Number of non-formal workers/Number of the employed X 100

## Data source/dissemination

The National Statistical Office conducted the first Informal Employed Survey in 2005, in conjunction with the Labour Force Survey (LFS), 3rd quarter. The 2nd round was conducted in 2006, in conjunction with the LFS, 2nd quarter.

Contact Tel. 02-281-0333

## Data presented in this report

Non-formal workers by sex, administrative area, and region 2006

## Data development plan -

## Non-formal workers

In 2006, workers in the non-formal sector accounted for $61.5 \%$ ( $33.6 \%$ male and $27.8 \%$ female) of the employed workforce. The largest proportion was in the Northeast. The majority of men in non-formal sector were in the urban area, while the majority of women in non-formal sector were in the rural area.

## Indicator 6.11 Proportion of Population Desiring Skills/Capacity Development

These data are useful for planning skills development, capacity development programmes.

## Definition

Skills/capacity development refers to occupational or skills development training and other trainings, excluding the followings

1) national security training, village defense training, village head training, etc.
2) health training, e.g. maternal and child training, health volunteer training, family plan ning training, etc.
3) other trainings, e.g. literacy campaign, ethics and civic citizen training, natural resource and environmental training, drug prevention and suppression training.

Training includes human resource training courses, seminars and workshops organized by government, state enterprise and private sector organizations.

Skills development training means training that aims to develop the workers' attitude, skills, knowledge and capacity so as to enhance the efficiency and quality of work.

## Calculation method

Proportion of population desiring skills/capacity development = Population 15 years and over desiring skills or capacity development/Population 15 years and over X 100

## Data source/dissemination

The National Statistical Office (NSO) conducted the Survey on Skills Development Survey as per the request by the Office of the National Economic and Social Development Board by including the questions in the Labour Force Survey (LFS), 1st quarter in 1995, LFS 1st quarter and 2nd quarter in 1999, LFS 1st quarter in 2001. During 2002-2006, the survey was conducted annually during January-March. The 2007 round was conducted as part of the LFS, 1st quarter.

Contact Tel. 02-281-0333.

## Data presented in this report

Proportion of population desiring skills/capacity development by administrative area, and region 2005-2007.

Data development plan
BGEP/OWAFD/MSDHS to collaborate with the NSO to process the data by sex, administrative area, and region.

## Population desiring skills/capacity development

In 2007, population 15 years and over was estimated to be 50.8 million, 24.6 male and 26.2 female. Out of this total, 9.2 millions or $18.2 \%$ wanted skills/capacity development. This included 4.5 million men and 4.7 women. The proportion of population desiring the training was $18.4 \%$ among men and $18 \%$ among women. $20.9 \%$ of rural population wanted skills/capacity development, compared with $12.2 \%$ among urban population. The proportion was highest among the Northeasterners at $27.3 \%$, followed by the Northerners at $21.3 \%$, the Southerners $15.9 \%$, those in the Central Region $10.3 \%$ and the Bangkokians 7.1\%.

## Indicator 6.12 Migration Rate

Migration has significant socio-economic impacts on the family, community and national development. Migration data are therefore very useful for planning and monitoring various aspects of development.

## Definition

Migration means the change of residence from one village, one city to another, or from overseas to the present residence within one year prior to the survey.

## Calculation method

Migration rate $=$ Number of migrants/Population X 100
Migration rate of the workforce = Migrants 15 years and over/Population 15 years and over X 100

## Data source/dissemination

The National Statistical Office (NSO) conducted the first Migration Survey in 1974. The survey covered only migration to Bangkok. Since then, the Migration Survey was conducted every year and during 1983-1990 the survey was extended to Bangkok vicinity and large cities in each region. The first nation-wide survey was conducted in 1992. Since then, the survey was conducted every two years until 1997. After a brief interval, the survey resumed in 2002 and 2004. Data were collected during the 2nd and 4th quarters.

Starting in 2005, the NSO conducted the survey annually. The 2006 round was in conjunction with the Labour Force Survey, 4th quarter.

## Data presented in this report

Migrants by sex, administrative area, and region, 2005-2006.

Data development plan -

## Migration situation

During 2005-2006, migration rates dropped from $4.9 \%$ to $3.6 \%$ for men and $3.8 \%$ to $3.1 \%$ for women. In 2006, out of 65.45 million population, 2.18 million or $3.3 \%$ were migrants. Among the 2.18 million migrants, 1.15 million were men, 1.03 million women.

Migration rate was highest in the Central Region at $4.1 \%$, followed by the North and the South at $3.5 \%$, the Northeast at $3.2 \%$ and Bangkok at $1.4 \%$, respectively. The Northeast had the largest number of migrants - approximately 715,000 , followed by 650,000 in the Central Region, 410,000 in the North, 310,000 in the South, and 93,000 in Bangkok.

Most male migrants were in the workforce. $83.6 \%$ of male migrants were employed, compared with $63.2 \%$ female migrants. $11.1 \%$ of male migrants were not in the workforce, compared with $32.9 \%$
female migrants. A large number of female migrants were involved in unpaid domestic services.
Most male migrants were in the workforce. $83.6 \%$ of male migrants were employed, compared with $63.2 \%$ female migrants. $11.1 \%$ of male migrants were not in the workforce, compared with $21.31 \%$ female migrants. A large number of female migrants were involved in unpaid domestic services.

## Indicator 6.13 Average Time of Population 10 Years and over by Activity

Women and men spend time on the daily routine differently. In part, this is determined by the society's gender perception of the appropriate role and responsibility of women and men, which has an impact on the women's self-development opportunities.

## Definition

Average time of population 10 years and over by activity means the average time of a day ( 24 hours) that population spend on each category of activities.

Activities are categorized into 4 groups:

1) Necessary time: sleep \& related activities, eating \& drinking, receiving medical \& personal care.
2) Contracted time: working (excluding travel), travel related working, learning (excluding travel), travel related learning.
3) Committed time: household maintenance, care for own household members, community service
4) Free time: social, cultural \& recreational activities, mass media use

## Calculation method

Data calculated from the Time Use Survey conducted by the National Statistical Office (NSO).

Data source/dissemination
The NSO conducted the first Time Use Survey in August 2001. The 2004 survey was the 2nd round, conducted in conjunction with the Labour Force Survey in August.

Contact Tel. 02-281-0333.

## Data presented in this report

Average time of population 10 years and over by activity by sex, administrative area, and region 2004

Data development plan -

## Average time by activity

In 2004, population 10 years and over spent a day (24 hours) as follow:

- Necessary time for sleeping \& related activities, eating \& drinking, receiving medical \& personal care (12.1 hours)
- Contracted time for working (excluding travel), travel related working, learning (excluding travel), travel related learning (8.4 hours)
- Committed time for household maintenance, care for own household members, community service (3 hours)
- Free time for social, cultural \& recreational activities, mass media use (3.6 hours)

Men had more time on necessary time, contracted time, and free time, while women spent 3.5 hours a day, almost twice as much as men, on committed time.

People in the Northeast and the South had more necessary time -12.4 hours a day. The Bangkokians spent 9.6 hours a day on contracted time, followed by people in the Central Region, the Northeasterners, the Northerners and the Southerners.

People in every region spent about 3 hours on household work, caring for household members and community services. But the Bangkokians had the most free time, about 4 hours a day.

## 7. Women in Power and Decision-Making

## Indicator 7.1 Proportion of Women in the Parliament

Women's participation in politics and public policy constitutes an important social dynamic. Women in decision-making positions can advance policy agendas, implement measures, propose or amend legislations toward gender equality. Increasing women's parliamentary representation is therefore one of the key international targets.

| Definition | Number of women in the Senate and the House of Representatives. |  |  |
| :---: | :---: | :---: | :---: |
| Data item | Number of women elected to the House of Representatives | Number of women elected to the Senate | Number of women appointed to the National Legislative Assembly (NLA) |

## Women in the Parliament

Women accounted for $10.4 \%$ of the Senate elected in 2000 for a six-year term. Women representation was highest in the North and the Northeast at $13.9 \%$ and $14.3 \%$, respectively. No woman was elected to the Senate from the South. In the 2005 general election, women made up $11.4 \%$ of the House of Representatives, an increase from $9.3 \%$ in the 2001 general election. In both elections, women representation was lowest in the South and the Northeast. In the 2005 election, women made a stride in Bangkok with $21.6 \%$ MPs. But they accounted for only $8.7 \%$ or 21 of the 242 Members of the National Legislative Assembly appointed as temporary legislative body after the coup in September 2006.

## Indicator 7.2 Proportion of Women in the Cabinet

Women's voices and viewpoints in politics are needed for a more thorough and balanced deliberation of national issues. The proportion of women in the Cabinet is an ultimate indicator of the Government's seriousness and sincerity in women empowerment and the promotion of gender equality

## Definition

Number of women appointed to the Cabinet

## Calculation method

Proportion of women in the Cabinet = Number of women appointed to the Cabinet/Number of the Cabinet members X 100

## Data source/dissemination

Bureau of Central Administration, Office of the Secretariat of the Cabinet disseminates the Royal Commands appointing the Cabinets at www.cabinet.thaigov.go.th and the Information Center, Office of the Secretariat of the Cabinet.

Contact Tel. 02-280-9000

## Data presented in this report

Cabinet members appointed by the Royal Commands on 26th February 2001, 23rd March 2005, and 8th October 2006, by sex.

Data development plan -
Women in the Cabinet

During 2001-2006, Thailand had 3 Cabinets, with a very low but rising women representation; $5.3 \%$ in 2001, 5.6\% in 2005 and 8.6\% in 2006.

## Members of the Cabinet by sex

## Indicator 7.3 Proportion of Women in Political Party Executive Committees

All major political parties have a policy to promote an open dialogue and more participation in policy-making, without mentioning any particular target group. In so far as women are concerned, political parties largely emphasize women protection rather than women empowerment. It is therefore important that women actively participate in political parties and the formulation of political party policy platforms.

## Definition

Women in political party executive committees (major parties, namely Thai Rak Thai, People Power, Democrat, Chart Thai, Mahachon, and Puea Pandin)

## Calculation method

Proportion of women in political party executive committees = Number of women in the executive committees of these political parties/Number of members of the executive committees of these political parties. X 100

## Data source/dissemination

Political parties' websites on election years.

2005 data are from Thai Rak Thai, Democrat, Chart Thai, Mahachon parties. These parties posed the list of their party executives on the web, with no gender disaggregation.

2007 data are from People Power, Democrat, Chart Thai, Mahachon, and Puea Pandin. These parties posed the list of their party executives on the web, with no gender disaggregation.

## Data presented in this report

Members of the political party executive committees by sex, 2005 and 2007

Data development plan -

## Women as political party executives

In 2007, women accounted for 11.3\% of the executive committees of major political parties, an increase from $8.4 \%$ in 2005. The Thai RakThai Party was dissolved in 2006. The new party - People Power had a large women representation in the executive committee - 16.7\%, compared with another new party - Puea Pandin that had none.

## Indicator 7.4 Proportion of Women in Executive Positions in the Civil Service

Balancing between family obligations and career is a challenge for most women, and if they have to choose, many would choose family over their career. Besides, male superiors are often skeptical about women's leadership skills. Not having opportunities to work and socialize closely with their male superiors also places women at a disadvantage. Although Thai women have scored impressive successes in many fields, they are still way behind men at the high end of the civil service.

## Definition

Executive positions mean deputy director of a department and higher (C9-11), excluding the Office of His Majesty's Principal Private Secretary, and the Bureau of the Royal Household

## Calculation method

Proportion of women in executive positions in the civil service $=$ Number of female executives in the civil service/ Number of executives in the civil service X 100

## Data source/dissemination

Committee of the Workforce Management and Policy Secretariat Group, Bureau of Classification and Compensation Development, Office of the Civil Service Commission (OCSC) collects data from government agencies.

The 2002-2003 data are classified by sex, The 2004-2005 data are classified by sex, and level. Data are disseminated in the Annual Report on Civil Service Manpower, 2004, 2005, 2006.

Contact Tel. 02-280-3332

Data presented in this report
Proportion of women in executive positions in the civil service by sex, and level, 20022005.

Data development plan
BGEP/OWAFD/MSDHS to contact the OCSC for data during April-May every year.

## Women in executive positions in the civil service

During 2002-2005, the proportion of female executives increased from $17.8 \%$ to $23.1 \%$. The 20042006 data show that the increase took place at all levels, except at the highest level - C 11.

## Indicator 7.5 Proportion of Women in Local, Village, and Subdistrict Administration

Women 's participation in local, village and sub-district (tambon) administration adds different perspectives and experiences especially in human, family and community development. It is hoped that as women participate more actively in local, village and sub-district administration, quality of life and other social issues will receive more attention and resources, compared with infrastructure development which has always been a priority agenda among male-dominated executives.

| Definition | Women in executive or legislative positions in the local administration (Provincial Administrative Organization - PAO, Municipality, Sub-district (Tambon) Administrative Organization - SAO, Bangkok Metropolitan Administration - BMA), and the village and tambon (as part of the provincial administration). |  |  |

## Women in local, village and sub-district administration

In 2006, proportion of women in local, village and sub-district administration was only 9\%. Women made up $17.4 \%$ of the BMA Assembly and District Assemblies, but they accounted for only $2.9 \%$ sub-district headmen, $4.3 \%$ village headmen and assistant village headmen. Local administration had only $11.3 \%$ female representation.

## Indicator 7.6 Proportion of Women's Votes and Women's Vote Turnout

Voting is an exercise of a fundamental political right in a democratic society. It is also a sign of self-respect. These data should stimulate women to play a more active role in promoting participatory politics.

| Definition | Women's votes means women's votes compared with men's in senatorial and general elections. |  |
| :---: | :---: | :---: |
|  | Women's vote turnout means the proportion of eligible female voters who cast their votes in senatorial and general elections. |  |
| Data item | Eligible voters | Eligible voters who vote |
| Calculation method | Proportion of women's vote $=$ Number of female voters/Number of voters X 100 <br> Women's vote turnout $=$ Number of female voters/Number of eligible female voters X 100 |  |
| Data source/ dissemination | Registration Section, Technology Development on Registration Group, Bureau of Registration Administration, Department of Provincial Administration (DoPA), Ministry of Interior (Mol) processes data from household registration for the Election Commission of Thailand (ECT). <br> Data are available at www.dopa.go.th Contact Tel. 02-791-7443 | Information Subdivision, Election Support Bureau, ECT processes data on the 2006 senatorial and general elections. Data are disaggregated by sex, but are incomplete as they cover only 62 provinces and not all constituencies in these provinces reported the data. <br> Contact Tel. 02-613-7333 ext. 2233-34 |
| Data presented in this report | Eligible voters by sex 2006 | Votes by sex 2006 <br> Vote turnout rate by sex 2006 |
| Data development plan | - | At the time of the election on the 23rd December 2007, the ECT and the DoPA agree on a gender-disaggregated data collection and processing system. Data on that election will be sent to the BGEP/ OWAFD/MSDHS in early 2008. |

## Women's votes and vote turnout

In 2006, women outnumbered men as eligible voters, and there were more women's votes than men's in both the senatorial and general elections. Women's and men's vote turnout rates were very close, at $65.9 \%$ and $65 \%$ respectively. Women's vote turnout was slightly higher than men's at the senatorial election at $63.2 \%$ and $61.4 \%$, respectively.

## Indicator 7.7 Proportion of Female Government Officials in Leadership Training

Female executives in the civil service still lack the confidence and trust of their superiors. Leadership training helps enhance the management skills of both men and women. It has become an important capacity development tool to spearhead the change management outlined by the public sector reform plan.

| Definition | Leadership training for the purpose of enhancing the capacity and performance of government officials under the new public sector management. |  |  |
| :---: | :---: | :---: | :---: |
| Data item | Trainees in the high-level executive programme organized by the Office of the Civil Service Commission (OCSC) | Trainees in the executive programme organized by the King Prajadhipok's Institute (KPI) | Trainees in the executive programme organized by the National Defense College (NDC) |

| Data development plan |  |  |  |

## Female government officials in leadership training

Although more female government officials have made their way to the high-level executive level, the proportion of female government officials in the leadership training was very low especially during 2004-2005. The share of female trainees dropped almost by half from the 2002-2003 period. The situation improved markedly in 2006. But the share of female trainees was still less than $10 \%$ in the NDC executive programme.

## Indicator 8.2 Ratio of Gender Focal Points to Government Agencies

Gender Focal Point and Chief Gender Equality Officer - CGEO, established at each government agency, are expected to serve as change agent toward gender equality. This mechanism is responsible for facilitating gender mainstreaming within the agency and into its policies and programmes.

## Definition

In 2001, the Cabinet decided to endorse the establishment of a Gender Focal Point in all government agencies at the department level and higher. The deputy director-general or the deputy permanent secretary is to be appointed as the Chief Gender Equality Officer (CGEO).

## Calculation method

Ratio of Gender Focal Points to government agencies = Number of Gender Focal Points established at the government agencies at the department level and higher/Number of government agencies at the department-level and higher

Data source/dissemination
BGEP/OWAFD/MSDHS collects and disseminated these data at www.gender.go.th Contact Tel. 02-306-8767

Data presented in this report

## 9. Human rights of Women

## Indicator 9.1 Proportion of Women in the National Committees on Human Rights

The establishment of the National Human Rights Commission of Thailand to protect and promote human rights reaffirms the respect for human rights and represents a commendable progress. An equal representation of women and men in this prestigious body reflects a fundamental human rights principle.

## Definition <br> Women appointed to the National Human Rights Commission of Thailand (NHRC).

## Calculation method

Proportion of women in the National Committees on Human Rights = Number of women appointed to the NHRC/Number of members of the NHRC X 100

## Data source/dissemination

Office of the NHRC. The NHRC has a six-year term. The first NHRC was appointed in 2001. The selection of the second NHRC was delayed due to the coup in 2006. Data by sex are from the appointment document.

## Data presented in this report

Member of the first NHRC by sex.

## Data development plan -

## Human rights mechanism in Thailand

The National Human Rights Commission Act 1999 stipulates that the selection process must take into account gender representation. The first National Human Rights Commission of Thailand consisted of 11 commissioners, 5 men and 6 women. The commissioners came from diverse backgrounds, e.g. ex-government officials, academics, development workers, NGOs.

## 10. Women and the Media

Indicator 10.1 Proportion of Women in the Media

The media plays an important role in raising the public's awareness and understanding of gender issues. On the other hand, the media could weaken the gender progress by projecting women's image as second-class citizen or sexual objects. A sizable representation of women in the media is expected to lead to an appropriate and fair gender perspective.

| Definition | Women who work in the media and have the press IDs issued by the Government Public Relations Department (PRD). |  |
| :---: | :---: | :---: |
| Data item | Number of the press who have the IDs issued by the PRD | Number of accountable persons in the media |

## Women in the media

More women have joined the media. In 2002, women constituted $26 \%$ of the media. This proportion rose sharply to $38.4 \%$ in 2006. In general, women were slightly more active in the broadcast media than the print media.

In 2005, only $12.1 \%$ of those in accountable positions, e.g. editor, publisher, managing director, chairman of the association, were women. The proportion was highest in Bangkok at $24.4 \%$, followed by the South, the Central Region, and the North. The Northeast came last with only $8.6 \%$

## 11. Women and the Environment

## Indicator 11.1 Proportion of Women in the National Committees on the Environment

It is important that women, especially rural women, participate in environmental management as their family's livelihood depends on natural resources and the environment. The participation of women at the policy level is another way to harness the potential of women as guardians of the environment.

## Definition

Women appointed to the National Environment Board (NEB)
Calculation method
Proportion of women in the national committees on the environment = Number of women appointed to the NEB/Number of NEB members X 100

## Data item

Members of the National Environment Board

## Data source/dissemination

Appointment of the NEB Members 2006. The appointment was disseminated by the Office of the Natural Resources and the Environment Policy and Planning at www.onep.go.th

## Data presented in this report

Members of the National Environment Board by sex 2006

## Data development plan -

## Women in the National Environment Board

The 23-member National Environment Board, chaired by the Prime Minister, largely consists of ex-officios. In 2006, only 2 members or $8.7 \%$ were women.

Members of the National Environment Board by sex

| National committees on the environment | 2006 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | number |  |  | \% |  |
|  | total | male | female | male | female |
| The National Environment Board | 23 | 21 | 2 | 91.30 | 8.70 |

## Indicator 11.2 Proportion of women in natural resources and environment training

Natural resources and environment training provides necessary knowledge and skills needed for the participation in natural resources and environmental management. The training helps enhance the role and effectiveness of women in the environment.

## Definition

Women in the natural resources and environmental management programmes organized by the Environment Research and Training Center, Department of Environmental Quality Promotion (DEQP), Ministry of Natural Resources and the Environment (MoNRE)

Calculation method
Proportion of women in natural resources and environmental management training = Number of female trainees in the above-mentioned programmes/Number of trainees in the above-mentioned programmes X 100

## Data source/dissemination

The Gender Focal Point, DEQP, MoNRE collects data on the beneficiaries of the Department's plans and projects. The 2004-2006 data are disaggregated by sex and are submitted to the Office of the Civil Service Commission on 31st January every year.

Data are available at www.deqp.go.th Contact Tel. 02-298-5620

## Data presented in this report

 Trainees in the natural resources and environmental management training by sex 2004-2006.Data development plan -

## Natural resources and environmental training

The proportion of women attending the natural resources and environmental management training organized by the Environment Research and Training Center, Department of Environmental Quality Promotion, Ministry of Natural Resources and the Environment dropped from $58.6 \%$ in 2002 to $48 \%$ in 2005 and $45.7 \%$ in 2006.

## Indicator 11.3 Proportion of Women as Leaders in Natural Resources and Environmental Management

When women use their knowledge and skills in natural resources and environmental management, they make valuable contribution as well as enhance the role of women in the society. When women and men work side by side to protect the environment, the society has a better chance for sustainable development.

Definition
Women as leaders in natural resources and environmental management

## Calculation method

Number of women as leaders in natural resources and environmental management/Number of leaders in natural resources and environmental management X 100

Data source/dissemination
Department of Environmental Quality Promotion, Ministry of Natural Resources and the Environment coordinated data collection by sex for the first time in 2007. Data processing is scheduled in early 2008.

Data presented in this report -

Data development plan -

## 12 The Girl-Child

## Indicator 12.1 Sex Ratio at Birth

Some societies have a sexual bias, which leads parents to determine the sex of their babies, resulting in an imbalance in the population structure.

## Definition

A live birth occurs when a fetus, whatever its gestational age, exits the maternal body and subsequently shows any sign of life, such as voluntary movement, heartbeat, or pulsation of the umbilical cord, for however brief a time and regardless of whether the umbilical cord or placenta are intact.

## Calculation method

Sex ratio at birth = Number of female live births/Number male live births

## Data source/dissemination

Health Information Center, Bureau of Policy and Planning, Office of the Permanent Secretary, Ministry of Public Health (MoPH), processes data from birth certificates in collaboration with the Bureau of Registration Administration, Department of Provincial Administration, Ministry of Interior.
"Birth statistics" are available by sex, region, and province at http://203.157.19.191/ index1_info.html.

The Annual Report on Health Statistics presents number of live births by sex, and region, but the provincial data are not presented with gender disaggregation.

Contact Tel. 02-590-1491

## Data presented in this report

Sex ratio at birth by region 2002-2006, by province 2006.

Data development plan
BGEP/OWAFD/MSDHS to obtain data from the Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH for processing and calculating national, regional and provincial indicators.

## Sex ratio at birth

Males outnumbered females at birth. Sex ratio at birth was approximately 0.94 in every part of the country. Some provinces showed drastic fluctuations between years, but the ratio was always in favour of males. No provinces exhibit an usually high or low ratio for a continued period of time.

## Indicator 12.2 Infant Mortality Rate

About 70\% of children who die before reaching the age of five die during their first year. Taking care of infants during this crucial period is therefore very important. The family's socio-economic conditions especially those concerning the mother's health have immense impacts on the infant's life and health. Healthy nutrition, knowledge about and access to pre-natal, maternal and child healthcare, immunization are some key factors to mother and child's health.

## Definition

Number of newborns who die before completing his/her first year per 1,000 live births.
A live birth occurs when a fetus, whatever its gestational age, exits the maternal body and subsequently shows any sign of life, such as voluntary movement, heartbeat, or pulsation of the umbilical cord, for however brief a time and regardless of whether the umbilical cord or placenta are intact.

## Calculation method

Number of newborns who die before completing the first year/Number of live births X 1,000

## Data source/dissemination

There are 2 important data sources.
1.) Institute of Population and Social Research (IRSR), Mahidol University, in collaboration with the National Statistical Office, calculates the data from the Survey of Population Change (SPC). Data are presented in survey report and at www.nso. go.th Contact Tel. 02-281-0333
2.) Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, Ministry of Public Health (MoPH) processes the data from death certificates in collaboration with the Bureau of Registration Administration, Department of Provincial Administration, Ministry of Interior. Data by sex and region are available at http://203.157.19.191/index1_info.html and the Annual Report on Health Statistics. Contact Tel. 02-590-1491

## Data presented in this report

Data from the Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH are used to calculate the indicator by sex and region 2002-2006, by sex and province 2006.

## Data development plan

BGEP/OWAFD/MSDHS to obtain data from the Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH for processing and calculating national, regional and provincial indicators.

## Infant mortality

Infant mortality rate during 2002-2006 remained largely the same. In 2006, the national infant mortality rate was 7.4 per 1,000 live births. The South consistently recorded the highest rate. The rate was noticeably higher among male infants throughout the country.

In 2006, provinces with the highest infant mortality rates were Narathiwat (13), Phitsanulok (12.41), Khon Kaen (12.38), Ubon Ratchathani (12.03), and Yala (11.11)

Provinces with the lowest infant mortality rates were Mukdahan (3.68), Phatthalung (3.88), Amnat Charoen (3.95), Maha Sarakham (4.14), Singburi (4.47).

## Indicator 12.3 Under 5 Mortality Rate

Although Thailand's U5M rate has continued to drop, it is still high compared with less than 6 per 1,000 live births in developed countries. This means a need for an improvement in maternal and child health to ensure that the mother, the family and the community have adequate knowledge and skills about child rearing. Most significant causes of death among children under five years of age are drowning, accident, injury/assault. Other causes are AIDS, dengue fever, respiratory infection, other infections, birth defect.

## Definition

Number of children who die before reaching the age of five per 1,000 live births.
A live birth occurs when a fetus, whatever its gestational age, exits the maternal body and subsequently shows any sign of life, such as voluntary movement, heartbeat, or pulsation of the umbilical cord, for however brief a time and regardless of whether the umbilical cord or placenta are intact.

## Calculation method

Under five mortality rate = Number of children who die before reaching the age of five/ Number of live births X 1,000

## Data source/dissemination

There are 2 important data sources.
1.) Institute of Population and Social Research (IRSR), Mahidol University, in collaboration with the National Statistical Office calculates the data from the Survey of Population Change (SPC). Data are presented in the survey report and at www.nso.go.th Contact Tel. 02-281-0333
2.) Heath Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, Ministry of Public Health (MoPH) processes death data on all age groups from death certificates in collaboration with the Bureau of Registration Administration, Department of Provincial Administration, Ministry of Interior. Number of deaths by age and sex are presented in the Annual Report on Health Statistics, and at http://203.157.19.191/index1_info.html Contact Tel. 02-590-1491

## Data presented in this report

Data from the Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH are used to calculate the indicator by sex and region 2002-2006, by sex and province 2006.

## Data development plan

BGEP/OWAFD/MSDHS to obtain data from the Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH for processing and calculating national, regional and provincial indicators.

## Under five mortality

Under five mortality rate dropped slightly from 11.73 per 1,000 live births in 2002 to 10.45 per 1,000 live births in 2006. The improvement took place in every area except for Bangkok. The South lagged behind other regions, and boys had higher mortality rate all over the country.

In 2006, provinces with the highest U5M were Narathiwat (18.41), Khon Kaen (16.75), Phitsanulok (16.28), Yala (15.63), and Ubon Ratchathani (15.57).

Provinces with the lowest U5M were Amnat Charoen (5.27), Mukdahan (5.78), Singburi (5.81), Pattani (6.34) and Ranong (6.59).

Under five mortality rate

## Indicator 12.4 Low Birth Weight (less than 2,500 grammes)

Any newborn weighed less than 2,500 grammes is considered to be a case of low birth weight. Newborns with low birth weight are more vulnerable than normal newborns; 75\% of newborn deaths are from the low birth weight group. If survive, they may also develop other health problems later on, e.g. limited learning ability, limited visual ability, problems with the respiratory system or digestion system. It is therefore important that health personnel provide nutritional advice to pregnant women and their family members, especially the husband who should play an important role in taking care of their pregnant wife.

## Definition

Low birth weight means a new born weighed less than 2,500 grammes, regardless of the age of the pregnancy.

A live birth occurs when a fetus, whatever its gestational age, exits the maternal body and subsequently shows any sign of life, such as voluntary movement, heartbeat, or pulsation of the umbilical cord, for however brief a time and regardless of whether the umbilical cord or placenta are intact.

## Galculation method

Low birth weight birth rate $=$ Number of live births weighed less than 2,500 grammes/ Number of live births weighed X 100

## Data source/dissemination

There were 2 data sources.
1.) The Maternal and Child Health Group, Bureau of Health Promotion, Department of Health (DoH), Ministry of Public Health (MoPH) processed data from the MoPH's health facilities in 75 provinces. Data did not include private facilities, but included some Bangkok facilities, disseminated in the "Report on Maternal and Pre-Natal Healthcare". The 3 latest issues cover the 1997-2001, 2001-2003, 2004-2005 periods. (Until 2003, DoH included Ratchaburi, Kanchanaburi, Nakhon Pathom, Samut Sakhon, Samut Songkhram, Phetchaburi and Prachuab Kiri Khan in the Southern Region. Starting in 2004, these provinces are classified as part of the Central Region as per the National Statistical Office's classification system).
2.) Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH processes data from birth certificates in collaboration with the Bureau of Registration Administration, Department of Provincial Administration, Ministry of Interior.

At present, the Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH is responsible for presenting number and percentage of live births by weight.

Data are disseminated in the Annual Report on Health Statistics and "Birth Statistics" at http://203.157.19.191/index1_info.html Contact Tel. 02-590-1491

## Data presented in this report

Data from the Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH are used to calculate the indicator by sex and region 2002-2006, by sex and province 2006.

## Data development plan

BGEP/OWAFD/MSDHS to obtain data from the Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH for data processing and calculating national, regional and provincial indicators.

## Low birth weight

During 2002-2006, the low birth weight rate hardly changed and stayed at $9.66 \%$ in 2006. The North lagged behind other regions while the situation was best in the South. Low birth weight was more common among female than male newborns in every part of the country.

In 2006, provinces with the highest low birth weight rates were Tak (20.36), Mae Hon Son (16.20), Lamphun (12.37), Chiang Mai (11.54), Chiang Rai and Ubon Ratchathani (11.25).

Provinces with the lowest low birth weight rates were Ranong (7.76), Nong Khai (7.98), Nong Bua Lam Phu (7.99), Phatthalung (8.00), and Phayao (8.02).

# Indicator 12.5 Proportion of Underweight Children 5/6 Years and under 

Underweight, a basic indicator for malnutrition, is attributed to family's income, knowledge about good nutrition practice. Underweight children lag behind other children in their physical, mental and emotional development. As a result of changing nutritional pattern and life style, Thai children are facing another kind of problem - overweight.

## Definition

Children aged 4 years 11 months 29 days and under that weigh below the new growth standard (definition used by the Division of Nutrition, Department of Health)

Children aged 5 years 11 months 29 days and under that weigh below the new growth standard (definition used by the Bureau of Health Promotion, Department of Health)

The new growth standard is a revision of the old standard based on the result of the Nutrition Survey in 1995. Reference group is urban children with medium to good socioeconomic background who have a potential to grow to their full potential. Classification is based on the Z-scores system.

Both the Division of Nutrition and the Bureau of Health Promotion use the new growth standard as their reference.

Weight by age indicates an overall nutrition situation. Height by age indicates a state of chronic malnutrition. Weight by height indicates a state of short-term malnutrition.

## Calculation method

Proportion of underweight children 5/6 years and under = Number of children aged 5/6 years and under who weigh below the new growth standard/Number of children aged $5 / 6$ years and under weighed X 100

## Data source/dissemination

There are 2 data sources.

1. Thailand Diet and Nutrition Survey. During 1960-2003, the Division of Nutrition, Department of Health (DoH), Ministry of Public Health (MoPH) has conducted 5 rounds. The latest round took place in 2003, 8 years after the previous one, covering 10 provinces. The report issued in 2006 shows the state of nutrition of the Thai population by sex, age group, administrative area, and region. The report is disseminated in print and is available at http://nutrition.anamai.moph.go.th Contact Tel. 02-590-4327
2.) Quarterly Report on the Nutrition Surveillance of Children Aged 0-72 Months. Evaluation and Information System, Technical Support Group, Bureau of Health Promotion processes data from the MoPH's health facilities in 75 provinces (not including Bangkok). Data are not disaggregated by sex. The 2003 data represents the percentage of protein and calorie deficiency. The new growth standard applies to the 2004 data onwards. Data years are fiscal years and data used to calculate the indicator are from the first quarter of the fiscal year. In 2003, 2004, 2005, 2006, and 2007, data are from $59,63,54,63,56$ provinces, respectively.

Data are disseminated by region and province in the report and at http://hp.anamai.moph.go.th/doc.php Contact Tel.02-590-4566-7

These two sets of data serve different purposes. The first source reports a considerable higher underweight rate than the second source.

## Data presented in this report

Proportion of underweight children 5 years and under by sex and region 2006 from the Division of Nutrition DoH, MoPH.

Proportion of underweight children 6 years and under by region 2003-2007, by province 2007, from the Bureau of Health Promotion, DoH, MoPH.

Data development plan
BGEP/OWAFD/MSDHS to consult the Bureau of Health Promotion, DoH, MoPH on the possibility of collecting the data by sex.

## Under weight children 5/6 years and under

According to Thailand Diet and Nutrition Survey 2003, 11.3\% of children aged 5 years and under were underweight. The underweight rate was higher among boys in both urban and rural areas in all regions. The Northeast had the highest percentage of underweighted children, followed by the South. Underweight was more prevalent among rural than urban children.

According to the Bureau of Health's surveillance report in 2007, provinces with the highest percentage of underweight children 6 years and under were Chonburi (7.22), Mukdahan (6.10), Pattani (5.70), Tak (5.49), and Yala (5.33)

Provinces with the lowest percentage of underweighted children 6 years and under were Samut Sakhon (0.59), Pathum Thani (0.61), Nonthaburi (0.79), Ayutthaya (1.02), and Ang Thong (1.07)

## Indicator 12.6 Proportion of Births by Women Under 20 Years Old

Most pregnancies among young women are unplanned. Young women are generally not prepared for pregnancy or motherhood; they do not have adequate knowledge on pregnancy, child rearing, which may result in toxemia of pregnancy, infectious delivery, infant mortality or disability. In addition, young mothers are often deprived of education, career and social opportunities to improve the quality of life for themselves and their children.

## Definition

Women who give birth when they are under 20 years old are considered under-aged mothers.

## Calculation method

Proportion of births by women under 20 years old = Number of mothers under 20 years old/Number of live births X 100
(Live births are proxy for the number of women who give births).

Data source/dissemination
There were 2 data sources.
1.) The Maternal and Child Health Group, Bureau of Health Promotion, Department of Health (DoH), Ministry of Public Health (MoPH) processed data from the Safe Motherhood project reports filed by MoPH's health facilities in 75 provinces. Data did not include private facilities, but included some Bangkok facilities, disseminated in the "Report on Maternal and Pre-Natal Healthcare". The 3 latest issues cover the 1997-2001, 2001-2003, 2004-2005 periods. (Until 2003, DoH included Ratchaburi, Kanchanaburi, Nakhon Pathom, Samut Sakhon, Samut Songkhram, Phetchaburi and Prachuab Kiri Khan in the Southern Region. Starting in 2004, these provinces are classified as part of the Central Region as per the National Statistical Office's classification system).
2.) Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH processes data from birth certificates in collaboration with the Bureau of Registration Administration, Department of Provincial Administration, Ministry of Interior.

At present, the Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH is responsible for presenting live birth data by sex, weight, mother's age group. But the data are not calculated to present this indicator.

Data are disseminated in the Annual Report on Health Statistics and "Birth Statistics" at http://203.157.19.191/index1_info.html Contact Tel. 02-590-1491

## Data presented in this report

Data from the Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH are used to calculate the indicator by region 2002-2006, by province 2006.

## Data development plan

BGEP/OWAFD/MSDHS to obtain data from the Health Information Center, Bureau of Policy and Strategy, the Office of the Permanent Secretary, MoPH for processing and calculating national, regional and provincial indicators.

## Under-aged mothers

Under-aged mothers accounted for $13.9 \%$ of all live births in 2002. In 2006, the percentage rose to $14.7 \%$. The North and the Central Region posed the highest rates at $17 \%$ and $16.6 \%$, respectively. Bangkok had the lowest rate at 10.9\%, and was the only area that reported a decline.

In 2006, provinces with the highest percentage of under-aged mothers were Kanchanaburi (22.88), Prachuap Khiri Khan (22.67), Chai Nat (21.43), Kamphaeng Phet (21.14), Suphan Buri (20.64).

Provinces with the lowest percentage of under-aged mothers were Pattani (9.44), Yala (10.74), Bangkok (10.88), Phuket (10.92), Narathiwat (11.05).

## Indicator 12.7 Number of Child/Minor Abuse Cases

Thai society should recognize the severity of the problem of child abuses, especially young girls who are the most vulnerable group. A more organized and comprehensive support system is needed, including an integrated reporting system to generate reliable data that can be used for planning and evaluating relevant policies and programmes.

## Definition

Number of closed court cases at the Criminal Courts and the Juvenile and Family Courts on sex related crimes, i.e. rape and related crimes as per Sections 277, 277bis.-277ter., 278-285 of the Criminal Codes.

A child or minor refers to anyone under 18 years old.

## Data source/dissemination

Data System and Statistics Section, Office of the Planning and Budget, the Judiciary of Thailand collects data on these cases.

As the data do not specify the age of the victims, it is not possible to distinguish children/ minors from other victims. Data on this indicator is therefore a subset of indicator 4.4.

Data are available at www.judiciary.go.th and the Annual Report on Statistics on Court Cases in the Kingdom 2001-2006. Contact Tel. 02-541-2284-91

## Data presented in this report -

Data development plan
BGEP/OWAFD/MSDHS to consult the Data System and Statistics Section, Office of the Planning and Budget, the Judiciary of Thailand on the possibility of data collection and processing by age group.

## Indicator 12.8 Number of Abused Children/Minors

Increase in child/minor abuses reflects growing family and social maladies. Lack of correct understanding about the role and responsibility of women and men is an underlying root cause of this problem. At present, there is no macro-level data on this indicator, which makes it difficult to assess the level and severity of the problem, and to determine appropriate measures.

## Definition

Children rescued from physical, emotion, sexual abuses admitted to the Homes for babies, Shelters for Children, Bureau of Anti-Trafficking in Women and Children, Department of Social Development and Welfare (DSDW), Ministry of Social Development and Human Security (MSDHS).

## Data source/dissemination

Bureau of Anti-Trafficking in Women and Children, Department of Social Development and Welfare, DSDW, MSDHS collects and processes data from 25 shelters.

Data are presented in the annual report. But the data are not classified by age group. Hence it is not possible to distinguish between children/minors and women. These data are therefore a subset of indicators 4.2 and 4.7. A new system is being developed to rectify this problem. Contact Tel. 02-659-6282-3

The Foundation for Women collects data on the number of women and children that received assistance from the Foundation by age and cause of violence during 2003-2006. On average, this involves 4-5 children per year.

## Data presented in this report -

Data development plan BGEP/OWAFD/MSDHS to consult relevant agencies on the possibility of collecting data based on the 13 digit ID to allow for gender and age classification and to avoid the duplication of data from various sources.
