This Disaster Climate Risk Management Capacity Assessment (D/CRMCA) was conducted between December 2013 and April 2014. This study was expanded from the initial capacity assessment conducted by the World Health Organisation (WHO) in Uganda, much as it was focusing on the health sector.

During the D/CRMCA, enormous support was given to our team by UNDP, the Office of the Prime Minister, Department of Disaster Preparedness and Management, WHO and the Disaster Risk Reduction National Platform Members in Uganda. We would like to thank all those who participated in the study and all those who took part in the two workshops, validation and dissemination. We sincerely hope that the findings, conclusions and recommendations originating from this report will assist your organizations/institutions in the continued Disaster Risk Management efforts in Uganda.

We would like to especially thank Mr. Jose Neil A. C. Manzano (Disaster Risk Management Advisor) and Mr. Gilbert Anguyo (Disaster Risk Reduction Analyst) from UNDP, Ms. Rose Nakabugo, Acting Commissioner for Disaster Preparedness and Management from the Office of the Prime Minister and Dr. Michael Lukwiya and Dr. Solomon Fisseha from WHO for their professional and constructive guidance during the assessment.

We are also grateful to all the respondents for the time they took to complete the questionnaire, for accepting to be interviewed as well as to those who participated in the stakeholder meetings.

Finally we thank the members of the research team for the efforts in the data collection and analysis. The team comprised;

Mr. Lazarus Ocira

Prof Christopher G Orach	MB ChB, MMed, MPH, PhD	Team Leader
Mr. Lazarus Ocira	BA, MA	Consultant

# **Executive Summary**

# **Background**

Uganda has registered several incidences of both natural and manmade disasters. The effects of the disasters have been profound on the people, their livelihood and the economy of the country. Management of disasters especially those compounded by climatic changes has been adhoc and there are hardly any preparedness measures in place to mitigate effects of the disasters. The Office of the Prime Minister with support from the United Nations Development Programme (UNDP) commissioned the Disaster and Climate Risk Management (D/CRM) capacity assessment from December 2013 to April 2014 to guide the development on D/CRM.

## **Objectives**

The overall goal of the assessment was to identify the key gaps and strengths in D/CRM capacity of the country with a view of addressing and strengthening those D/CRM capacity gaps.

#### **Methods**

The country disaster risk management capacity assessment was conducted using a mix of methods. Quantitative and qualitative data were collected through review of existing documents, key informant interviews, observation, and stakeholder meeting/workshop. The UNDP capacity development framework was adapted and used for the collection and analysis of quantitative and qualitative data. The researchers were trained and the study instruments pretested. Qualitative data were analyzed using content analysis while SPSS and Excel computer packages were used to analyse quantitative data.

# **Key Findings**

#### **Enabling Environment**

The study shows that overall, the capacity for enabling environment for D/CRM is considered high for Advocacy rated 3.6, D/CRM policy development rated 3.6 and stakeholder engagement/networking rated 3.5, respectively. However, capacity was considered low in the areas of D/CRM budgetary allocation and appropriate use rated 2.6, functional operating procedures rated 2.7, research rated 2.8, as well as Monitoring and Evaluation of D/CRM activities rated 2.9.

#### **Organization Level Capacity**

At the organizational level, capacity was considered high for preparedness rated 3.3, response capacity rated 3.1 and rehabilitation/recovery capacity rated 3.0 respectively. However capacity was considered low in the domain of mitigation rated 2.9. Under mitigation domain, capacity was low for risk transfers mechanisms rated 2.2, environmental resource management rated 2.6 and livelihoods resilience and community based disaster risk reduction (DRR) rated 2.7. Under rehabilitation/recovery, capacity was low in the area of resettlement initiative rated 2.7, and in the preparedness domain, capacity was rated low in the areas of contingency planning rated 2.9, early warning rated

3.0 and human resource training rated 3.0. There is inadequate human capacity and skills in D/CRM in local governments and high reliance on the capacities of international humanitarian organizations and non-government organizations. There are inadequate financial resources for Climate Risk Management in both national and local government levels compounded by the limited availability of equipment, e.g. functional automatic weather stations, to facilitate disaster and climate risk management.

#### **Individual Level Capacity**

At the individual level, capacity was rated high for availability of staff with knowledge and skills for preparedness rated 3.3 as well as staff with knowledge and skills in response rated 3.3. Overall, human resource availability for D/CRM interventions was rated lower 3.1 compared to staff with knowledge and skills rated 3.3.

#### **Conclusions**

The study has revealed several gaps and challenges on D/CRM in the country. Under the enabling environment, the domains with the most inadequacies include budgetary allocation/funding, lack of standard operating procedures (SOP) and inadequate monitoring and evaluation of D/CRM interventions.

At the organizational level, under preparedness, inadequacies exist in the domain of contingency planning, early warning and human resources skilled in D/CRM; under mitigation inadequacies exist in the areas of (risk transfer mechanisms, microfinance, inadequate equipment, livelihoods resilience; and under response, there is need to strengthen emergency response efforts and finally under rehabilitation there are gaps in establishing rehabilitation initiatives.

At the individual level, inadequacies exist in the availability of qualified staff in the field of D/CRM. The main challenges identified in D/CRM interventions were in the areas of limited resource allocation/funding, limited equipment, low capacity for early warning and response; inadequate human resource capacities coupled with staff turnover in institutions.

The multiplicity of inadequacies in capacities suggest the need for government (at central and local levels) and stakeholders to invest in strengthening capacities in the various domains of D/CRM (enabling environment, organizational and individual levels) for effective disaster and climate risk management in the country.

#### Recommendations

#### **Enabling Environment**

The study has shown that there is low capacity for budgetary allocation, Standard Operation Procedures (SOP), and for Monitoring and Evaluation of D/CRM. Hence, there is need for government and development partners (stakeholders) to increase funding/budgetary allocation for D/CRM interventions, increase staff availability and capacity through provision of appropriate training opportunities, ensure use of SOP, and promote monitoring and evaluation of D/CRM interventions.

#### **Organization Level Capacity**

Several organizational level capacity gaps were identified. Under mitigation, capacity was low for risk transfers mechanisms and environmental resource management, livelihoods resilience and community based DRR. There is need, therefore, to strengthen various community livelihood resilience capacities including through community sensitization, income generation and saving schemes, establishment of by laws against environmental degradation, enforcement of policies on environmental protection and establishment of functional DRR structures at community level.

Under preparedness, there is need to develop multi-hazard contingency plans and business continuity plans.

In the realm of response, there is need to strengthen capacity through the acquisition of appropriate equipment for search and rescue and response, training on emergency response and activation of the incident command centre at national level i.e. National Emergency Coordination Operation Centre (NECOC).

Under rehabilitation/recovery, capacity was low in the area of resettlement initiative. There is need to plan for durable solution/exit plan for recovery by empowering communities, allocating budget for recovery rehabilitation, and working with communities to implement recovery plans.

#### **Individual Level Capacity**

There is need to build human resource capacity through appropriate specialized graduate level training. Furthermore, professional courses in specialized D/CRM fields should be organised. Government should provide funding to support Universities to conduct further specialized trainings and research in the field of D/CRM.

# I.O Introduction

### 1.1 Background and Situation Analysis

Globally, major disasters linked to natural phenomena are on the increase. According to EM-AT/CRED, floods have been the major cause of disasters with an estimated 94,850,811 people affected, followed by drought with 75,489,671 persons affected since 2009-2010.

In Africa, the leading causes of disasters are floods 27%, drought 18% and a combination of epidemics, famine and insect infestation leading to 39% of the disasters on the continent as illustrated in figure 1 below.

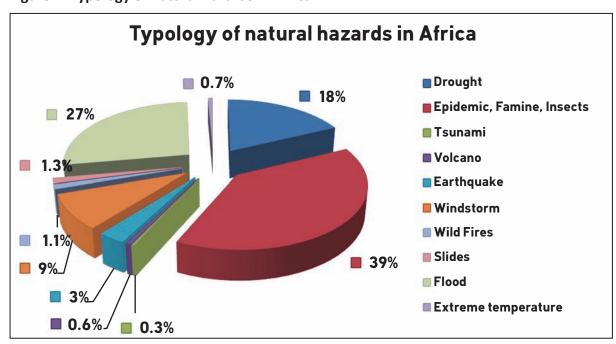

Figure 1: Typology of natural hazards in Africa

Source: ICSU-ROA 2007

Uganda has registered various incidences of both natural and manmade disasters. These disasters have had profound health and socio-economic impacts. Several areas in Uganda are prone to various types of hazards. The Mt. Elgon and Mt. Ruwenzori sub-region are prone to landslides, floods and Seismic activities. The Karamoja sub-region in north eastern Uganda is prone to drought and famine. The Acholi, Lango and West Nile sub-region are just recovering from over 20 years of civil war which led to internal displacement of over 2 million people. Civil unrest in the neighbouring countries of Kenya, South Sudan, Rwanda, Somalia and the Democratic Republic of Congo (DRC) has led to the influx of over 200,000 refugees who are currently living in Uganda. Terrorist attack by the Al-Shabaab in 2010 resulted into the death of over 75 people, with several others permanently disabled.

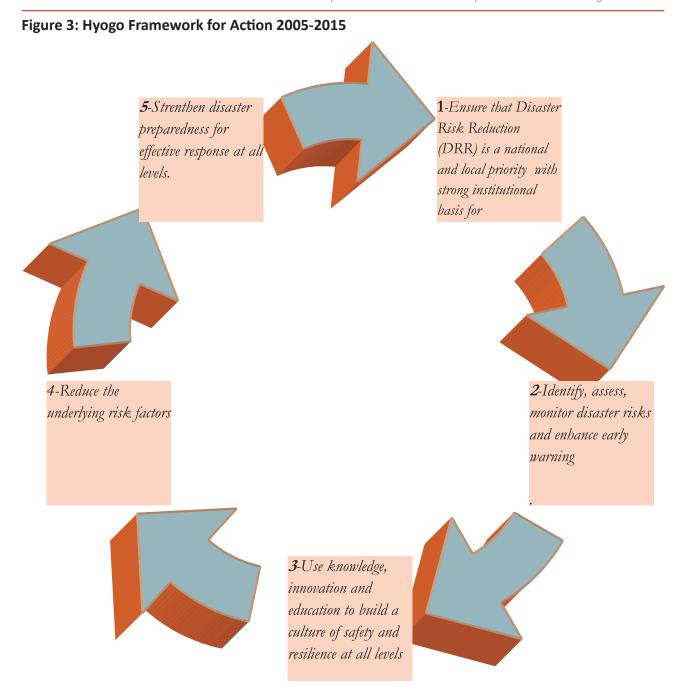

In addition, Uganda lies within the Yellow Fever and Meningitis epidemic belt. Uganda has also recorded epidemics of various disease including Viral heamorhagic fever (Ebola and Marburg) and Cholera, Hepatitis E, Yellow Fever, Meningitis, Polio and Measles outbreaks over the last 10 years.

The management of these disasters has been adhoc. There are hardly any preparedness measures in place to mitigate the effects of the disasters. Disaster risk management is defined as the systematic process of using administrative directives, organizations, and operational skills and capacities to implement strategies, political and improved coping capacities in order to lessen the adverse impacts of hazards and the possibility of disaster. Disaster risk management comprises several components including preparedness, mitigation, prevention, response rehabilitation and recovery, as illustrated in Figure 2 below.

Figure 2: Components of Disaster Risk Management

Effective disaster and climate risk management contributes towards the building of resilience of nations and communities to disasters. The Hyogo framework 2005-2015 underscored the need for, and identified ways of, building the resilience of nations and communities to disasters. Five priority actions illustrated below in the global Hyogo Framework for Action 2005-2015 are linked to Disaster Risk Management. (Refer to Annex 7)

The Office of the Prime Minister (OPM) in collaboration with United Nations Development Programme (UNDP) and World Health Organisation (WHO) country office commissioned a study to assess D/CRM Capacity in Uganda in order to identify gaps and strengths that guide the development of the D/CRM Capacity Development Plan. The study was conducted from December 2013 to April 2014.

# 2.0 Purpose, Aims and Objectives of the D/CRM Capacity Assessment

#### 2.1 The Purpose

To identify the key gaps and strengths in D/CRM capacity of the country with a view to strengthening D/CRM capacity so as to contribute to the reduction in disaster and climate risks as well as economic loss and social disruptions.

#### 2.2 The Aims and Objectives

- To identify, map and document all the stakeholders in D/CRM and their capacities;
- Identify gaps in D/CRM implementation in the country;
- Develop a road map with cost for strengthening D/CRM; and
- Agree on way forward, timeliness and responsibility for Uganda

#### 3.0 Methods

#### 3.1 Study Design

This was a cross-sectional study. The assessment focussed on the present status and circumstances of institutions dealing with D/CRM in the country. Both quantitative and qualitative techniques were used in data collection.

# 3.2 Study Population

The study population consisted of stakeholders working in the field of D/CRM, Climate Change Adaption, emergency response and community resilience and livelihoods. They comprised programme managers and officers of government ministries and departments, local governments-districts and authorities, United Nations (UN) agencies, international non-governmental organizations (NGOs), universities, research institutions, local NGOs, private sector, the media and Civil Society Organisations (CSOs). (Refer to the list of respondents in Annex 2)

# 3.3 Data Collection Techniques

The data were collected using both quantitative and qualitative techniques. The main techniques of data collection used included review of documents, key informant interviews, and stakeholder meetings as stipulated in sections 3.3.1 - 3.3.3 below. Data collection instruments were pretested.

#### 3.3.1 Review of Existing Documents

Review of key documents was conducted. The key documents reviewed pertained to disaster risk reduction (DRR) and climate change adaptation (CCA) strategic framework; monitoring and evaluations frameworks, UNDP capacity assessment framework, national D/CRM policies, WHO D/CRM assessment report, Uganda Red Cross strategic plan, Uganda local government Association Working paper on DRR among many. (Refer to Annex 5).

#### 3.3.2 Key Informant Interviews

Key informant interviews were conducted. The categories of key stakeholders interviewed included heads of institutions and D/CRM focal persons in the following organization; government ministries, UN agencies, International NGO, local government and Civil Society Organizations (CSOs) as stipulated in section 2.2.1 above 3.1. Key informant interviews used key informant interview guide (See KII guide – Annex1.2).

#### 3.3.3 Stakeholder Meetings

Two validation workshops were held with stakeholders. The meeting was designed as an approach/technique to collect more data and information on D/CRM. Furthermore, the meeting was used to get feedback on the preliminary findings (Refer to the list of stakeholders during the validation workshop Annex 3). The participants were invited from government ministries, UN agencies, INGOs, local NGOs, private sector, Academia, media and CSOs.

Validation D/CRMCA workshop organised by OPM and supported by UNDP

#### 3.3.4 Observations

Observations were carried out in various institutions/organizations to check for capacity in terms of availability of equipments for response, warehouses/stores for stock piling food and non-food items for disaster risk management.

Assistant Commissioner addressing the meeting, Mr Gilbert Anguyo of UNDP on the extreme left. Dr Chris Garimoi Lead Consultant in the middle and Mr. Laz Ocira, Associate Consultant on the extreme right

#### 3.4 Study Instruments

Two study instruments, qualitative and qualitative, were used. The quantitative instrument was adapted from the UNDP capacity assessment framework.

Quantitative tool: We used questionnaires to collect quantitative data. (Refer to the questionnaire sample in Annex 1.1).

Qualitative tool: Key informant interview guide was used to get the perceptions of respondents regarding D/CRMCA. This was complemented in the conduct of observation using a checklist and held stakeholder meetings. (Refer to Key informant interview guide in Annex 2.2; and list of participants in the Validation and Dissemination Workshops, Annexes 3 and 4 respectively).

#### 3.5 Data Management and Analysis

#### 3.5.1 Data Management

To ensure quality in data collection, researchers were trained and the instruments pre-tested. The quantitative data collected were checked for completeness, cleaned and captured. Data entry was carried out in Excel spreadsheet.

#### 3.5.2 Data Analysis

The qualitative data were transcribed and analysed according to themes using a master sheet. Quantitative data were analyzed using an excel computer package. Quantitative data collection instrument was designed according to a rating system from 1-5 where 1=Very low, 2=Low, 3=Moderate, High=4 and 5=Very High. Rates were computed for the various variables under each capacity domain.

#### 3.6 Limitations

The study had some limitations. These included;

- 1. Reluctance by organizations to expose their capacity status;
- 2. Some focal persons were not available, but in the field responding to ongoing emergencies.

# 4.0 Main Findings

The findings of the study are presented in five sections. In the first, section 5.1, the background of the respondents and their institutions were presented. In the second section 5.2, the finding on the Enabling Environment Capacity for DC RM is presented. The third section 5.3 addresses the Organisational Capacity level and the Individual level Capacity is presented in the fourth section 5.4. In the final section, 5.5 cross cuttings issues are presented and discussed.

# 4.1 Background Characteristics of Respondents and Institutions

Table 1: Background of Respondents and their Institutions

Respondents	Frequency	Percentage
Characteristics	(n=47)	(%)
Position		
Programme Assistants	9	19.1
Programme Officers	11	23.4
Lecturers	3	6.4
Managers	24	51.1
Sex		
Male	30	63.8
Female	17	36.2
Qualification		
Bachelors	6	12.7
Masters	39	83
P h D s	2	4.3
Organization /Institution		
INGO	5	10.6
Local NGO	6	12.8
UN Agency	9	19.1
Ministry	14	29.9
Local government	9	19.2
Academic Institution/University	9	19.1

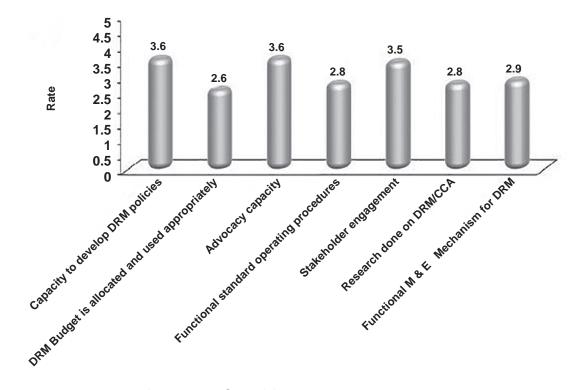

Keys: INGO=International non-governmental organization; UN= United Nations

The majority of respondents 51.1% is comprised of Managers and 23% of Programme Officers. The test is comprised of lecturers 6.4% and assistants 19.1%.

Two thirds of respondents 64.8% were males, 36.2% were females. Most respondents (83.0%) have a Masters Degree. About a third 29.9% were from Ministries including OPM and Health, 23.4% were from either an INGO or local NGO, 19.1% were from UN agencies including UNDP, WFP,WHO, UNFPA, IOM and UNICEF. Similarly, 19.1% were from local governments.

#### 4.2 Enabling Environment Capacity

Figure 4: Enabling Environment Capacity

#### **Elements of Enabling Environment capacity**

The study show that, within the Enabling Environment, advocacy was rated highest at 3.6, followed by capacity to develop D/CRM policies and frameworks at 3.6 and stakeholders' engagement/ networking rated 3.5. Capacity was found to be low for budgetary allocation for D/CRM rated at 2.6, functional Standard Operating Procedure (SOP) rated 2.8 and Monitoring and Evaluation rated at 2.9. Budgets being used appropriately rated at 2.6 and research work on D/CRM rated at 2.8.

#### **Strengths**

The enabling environment for D/CRM domain, capacity is considered highest for Advocacy rated 3.6, Policy and frameworks development rated 3.6, and Stakeholder engagement and networking rated 3.5. The reasons for these findings are because advocacy and stakeholder engagement are relatively easy for several implementing partners given the existence of the DRR national platform where

several stakeholders regularly meet and engage. Similarly, there exist national policies on D/CRM, however, the main challenge is usually in ensuring effective implementation, as well as, monitoring them using appropriate instruments.

#### **Inadequacies**

The study has revealed that D/CRM capacity is considered low in several areas. Budgetary allocation and appropriate use for D/CRM was rated low 2.6. Financial allocation for disaster and climate risk management is generally allocated a relatively low budget by government institutions and partners. This may be due to low prioritizations of the interventions and challenged in the appropriate use of these funds in some public offices and by partners. This implies the need for more transparency and accountability by all stakeholders.

Functional SOP was rated at 2.8. This suggests that only just over half of the stakeholder groups consulted have existing standard operating procedures, yet the availability of and functionality of SOPs is critical in guiding quality disaster and climate risk management interventions. It is important and recommended that standard operating procedures are developed, shared and used by stakeholders in any disaster and climate risk management settings.

Research on D/CRM and CCA was rated 2.8. The rather low rating of research in the area of D/CRM is not surprising. Research is an expensive undertaking; in addition, it's often the mandate of academic and research institutions. Adequate finances should be devoted for and the appropriate organizations supported and commissioned to undertake appropriate and relevant researches in the domains of D/CRM.

Monitoring and Evaluation mechanisms were rated low at 2.9. According to several stakeholders, for many implementing partners, while monitoring their work is often carried out, evaluation of the work is rarely done. The reasons for this include lack of planning for evaluation including the financing of the evaluation.

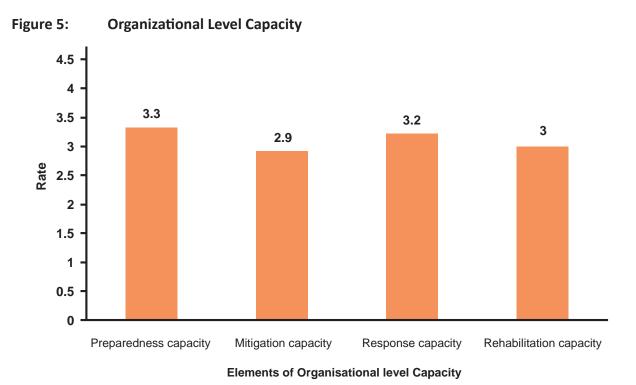

#### **Action Points**

The actions points below are considered effective if all stakeholders work together in a more coordinated fashion:

- Budgetary allocation towards D/CRM being the lowest at 2.6 in terms of Enabling Environment rating should draw much attention by increasing mobilization efforts for funds at all levels.
- Develop and ensure SOP is developed and used to guide actions/interventions in D/CRM based on the findings from this study which is rated at 2.8.
- Research and knowledge development should be encouraged and supported by key stakeholders in the areas of D/CRM/CCA to facilitate evidence-based advocacy among other interventions.
- Strengthen mechanisms for monitoring and evaluation of D/CRM interventions at all levels with harmonized tools.

## 4.3 Organizational Level Capacity

The study shows that at the organizational level, capacity for preparedness and response are higher, rated at 3.3 and 3.1 respectively compared to capacity for mitigation and rehabilitation rated 2.7 and 3.0 respectively in the country.

#### **Strengths**

At the organizational level, capacity for preparedness for D/CRM was considered highest rated at 3.3. Within the preparedness domain capacity for awareness creation was the most highly rated at 3.3. This is because of the relative ease to undertake element-dness such as awareness creation which requires relatively little resource investment compared to the other interventions e.g. response, human resources training which are more resource intensive.

Capacity for response was also rated high 3.1. This may be attributed to the fact that several stakeholders including – UN agencies and international NGO have the financial resources or they can easily mobilize funds in the event of any disasters to mount appropriate and effective response/interventions.

#### **Inadequacies**

The study shows that at organizational level, mitigation capacity was rated lowest while under the mitigation domain, risk transfer mechanisms/micro-insurance rated 2.2 and environmental resource management rated 2.6 exhibited the widest gaps. This may because specific risk transfer mechanisms/micro-credit schemes may not be easy to implement in the affected communities. In addition, environmental resource management interventions may be challenging to implement due to lack of policies and the enactment of the necessary and appropriate laws to enforce their implementation.

Figure 6: **Preparedness Capacity** 3.5 3.3 3 3 2.9 3 2.5 2. 1.5 1. 0.5 Early warning Contingency Awareness Human resource system planning creation training

**Elements of Preparedness Capacity** 

Under preparedness domain, the capacity for awareness creation is considered highest, rated 3.3 however contingency planning was rated lowest at 2.9.

#### **Strengths**

Awareness creation was found to be the area where there exists highest capacity under the domain of preparedness. The explanation why awareness creation is considered highly is because of the relative ease of conducting it compared to the other elements of preparedness which are more resource intensive and demanding.

#### **Inadequacies**

The main areas of deficiencies in the realm of preparedness were reported in the domains of contingency planning rated 2.9, early warning rated 3.0 and human resources training rated 3.0. Contingency planning was considered a weak area because of the lack of sources of funding as it was not often prioritized by both government and other stakeholders (implementing partners) working in the field of D/CRM. The fact that contingency planning relies on a comprehensive risk assessment which was not done until the aspect of hazard, risk, and vulnerability mapping was undertaken contributed to it not being prioritized. The methodology for contingency planning was not also standardized and so there was no agreement on the quality and standard for said contingency plans.

Early warning was mentioned as an area with gaps because of several inadequacies including lack of resources including essential equipment for forecasting disasters. Human resource gaps identified in preparedness include the lack of skilled personnel in adequate number to be able to undertake disaster and climate risk management preparedness in various public and private institutions.

#### **Action Points**

#### Contingency Planning

- OPM and should harmonize a national contingency plan and methodology for all D/CRM practitioners as the study shows that Contingency Planning is inadequate at 2.9;
- There is need to develop multi-hazard contingency plans (floods, drought, fire, diseases, etc);
- Government and development partners should develop and operationalise business continuity plans (BCP) to support and compliment the Contingency Plans.

#### Early Warning

Early warning is essential in terms of preparedness and mitigation of disasters. To realize effectiveness of Preparedness and mitigation the following actions points are suggested:

- There is need for government and development partners to systematize early warning systems into their planning and programming activities;
- Organize specialized trainings for D/CRM practitioners on early warning systems; Organize
  exchange learning visits to countries that have excelled in early warning systems such as
  Philippines, Malaysia and Hongkong;
- Government through Meteorology departments should set up weather stations and automatic network all over the country to facilitate early warning systems;
- OPM should coordinate early warning activities;
- There is need to undertake research, document and promote indigenous knowledge in early preparedness and early response.

#### Human Resources

Human resources is critical for effective D/CRM. The following are the action points to address the human resource gaps under Preparedness:

- There is need for specialized training in D/CRM (preparedness, mitigation, response and rehabilitation/recovery);
- There is need to provide specialized short courses including GIS, CCM/A, search and rescue, contingency planning, early warning system, HVCA for DC RM practitioners; There is need for strategic alliance/engagement with institutions of higher learning to coach and mentor D/ CRM practitioners;
- Provide opportunity for D/CRM practitioner for exchange learning visits; and
- Invite experts/guest speakers on D/CRM to share experiences.

Mitigation capacity was considered to be highest for hazard, risk and vulnerability assessments and research and knowledge management. The study has, however, revealed that capacity is considered least for risk transfer transfer/microinsurance mechanisms rated 2.2, environmental resource management 2.6 and livelihood resilience rated and community based D/CRM rated 2.7, respectively.

Figure 7: Mitigation capacity 5 4.5 4 3.5 2.9 3 2.7 2.7 2.7 Rate 2.5 2.2 2 1.5 1 0.5 0 Community Livelihoods Environmental Risk Hazard, risks and Research and based DRM resilience resource transfer/Micro vulnerability knowledge

#### **Elements of Mitigation Capacity**

insurance

assessment

management

management

#### **Strengths**

Under mitigation, capacity was reported to be high in the areas of Hazards and Vulnerability Assessments rated 2.9, and Research and knowledge management rated 2.8. The higher capacity in the domains of hazards and vulnerability assessment, as well as, research and knowledge transfers and dissemination may be attributed to their being considered important and organizations often strive to ensure they are carried out either using their own or hired specialists prior to mounting interventions. The findings of assessments and research and knowledge management are critical in helping steer implementation of the D/CRM activities.

#### **Inadequacies**

Several areas of capacity inadequacies were identified including in the areas of risk transfer transfer/micro-insurance rated 2.2, environmental resource management rated 2.6; livelihood resilience rated 2.7 and community-based DRR rated 2.7, respectively. The low capacity for risk transfers and micro-insurance is attributable to the lack of resources including finances and human resources to effect these interventions. Environmental resource management capacity may be lacking owing to the several investments required in the domain including financial, material, human and equipment required for implementation. Capacity for livelihood resilience may be low because of limited individual and community and organizational investments in various socio-economic and Agricultural undertakings. Finally, the low community based DRR capacity needs to be enhanced through a multipronged support mechanism including community sensitization and strengthening community leadership structures to effectively implement D/CRM.

#### **Action Points**

#### ■ Livelihoods and Risk Transfer Mechanisms

- Enhance food security measures by all stakeholders;
- Climate change adaptation and mitigation measures (small scale irrigation and water harvesting schemes);
- Diversification of livelihoods measures (including crop production, livestock, as well as trade);
- Supporting community resilience including training. Construction of water resources that are climate risk proof;
- Multi-hazards Insurance policy to support (drought, floods, pests, and fires) disasters; and
- Revolving food stocking system.

#### ■ Community-Based DRR

- Establish DRR functional structures committees at community level;
- Establish awareness creation community sensitization on disaster and climate change risk management (e.g. drama groups); and
- Coordination of activities by district DDMC and OPM.

#### ■ Environmental Management

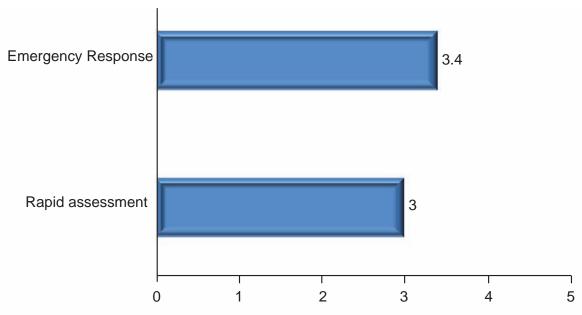

- Establish by-laws against environmental degradation and bad practices such as charcoal, bush burning, etc.;
- Undertake afforestation to increase carbon capture and sequestration and help improve biodiversity;
- Enforcing policy on environmental protection e.g. tree planting, wetland management, pollution, etc.;
- Establish by laws against environmental degradation e.g. charcoal, bush burning, etc.; and
- Support waste management (recycle, collection, etc.) to minimize drainage blockade leading to flooding, etc.

The study has revealed that capacity for rapid assessment was rated 3.0, however capacity for emergency response was rated higher at 3.4. This suggests the need to further strengthen rapid assessment capacity as well as emergency response efforts.

#### **Strengths and Inadequacies**

Under response, capacity was reported to be higher for emergency response rated 3.3 compared to rapid assessment rated 3.0. The plausible explanation is that implementing partners may be investing more in emergency response — to save lives than in undertaking studies to provide evidence for response. Hence, rapid assessment is less prioritized as a vital activity for investment. Implementing partners often use the term "quick and dirty" for rapid assessment which suggests that it is a crude exercise and not considered very important. Moreover, it may also require that implementing organization have to hire external consultants at a cost.

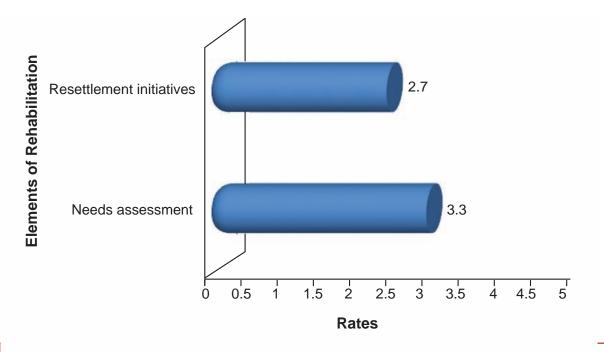

Figure 8: Response capacity

#### **Action Points**

- Rapid assessment is a vital initial step in emergency response and should be prioritized and undertaken systematically and with a clear methodology.
- Training courses in research methodology e.g. quantitative and qualitative research techniques are recommended for in service personnel in various organizations.
- Acquisition of equipment for rescue and response activities e.g. earth moving equipment, GPS, ambulance, helicopters, etc.;
- Stockpiling of supplies food and non food items drugs, vaccines, etc.;
- Establishment of warehouses/stores in disaster prone areas;
- Training in emergency response e.g. first aids, search and rescue, etc.; and
- Activating and operationalising incident command centre at national level e.g. NECOC.

Figure 9: Rehabilitation/Recovery Capacity

The study has revealed that capacity for needs assessment is higher 3.3 compared to rehabilitation initiatives rated 2.7 which may be attributed to the costs associated with the later.

#### **Strengths**

During the recovery phase, the study has revealed that stakeholders have higher capacity for needs assessment rated 3.3 compared to capacity for resettlement initiatives. The reason for higher capacity for needs assessment may be attributed to the fact that this requires significantly less financial, material and human resources.

#### **Inadequacies**

Capacity for rehabilitation initiatives was reported by stakeholders as lower rated 2.7. The explanation for this finding is that rehabilitation initiatives require several inputs including planning for and significant material requirement which the various implementing partners may not have.

#### **Action Points**

- Integrate durable solutions into planning and programming of recovery/rehabilitation activities such empowering communities to plan own foods under self-help initiatives;
- Allocation of budget at national and local levels for recovery and rehabilitation;
- Work with communities in designing and implementing recovery plans; and
- Awareness creation on DRR to mitigate impact of disaster.

#### 4.4 Individual Level Capacity

**Table 2: Individual level Capacity** 

Characteristics	Ratings					
High	Overall Rate	Very Low	Low	Moderate	High	Very High
Human Resources						
Presence of qualified staff for D/CRM	0.1	0.5	0.9	0.8	0.7	3.0
Capacity for D/CRM/specialised staff	0.1	0.3	0.9	1.2	0.7	3.2
Average	0.1	0.4	0.9	1.0	0.7	3.1
Knowledge and Skills						
Staff with knowledge & skills for preparedness	0.1	0.3	1.1	1.0	0.8	3.3
Staff with knowledge & skills for mitigation 0.1	0.4	1.0	1.1	1.0	0.6	3.2
Staff with knowledge & skills for response 0.1	0.3	1.0	1.3		0.7	3.3
Staff with knowledge & skills for rehabilitation	0.1	0.3	1.0	1.4	0.9	3.2
Average	0.1	0.3	1.2	1.2	0.8	3.3

The individual level capacity most highly rated were staff with knowledge and skills in response and preparedness rated at 3.3 and staff with knowledge and skills in mitigation, and rehabilitation rated 3.2, as well as, availability of specialised staff for D/CRM 3.2. Overall, human resource availability for D/CRM interventions was rated lower at 3.1 compared to staff knowledge and skills rated 3.3.

#### **Strengths**

The study has revealed that individual level capacity most highly rated, were; staff having knowledge and skills in response and preparedness rated 3.3 each, and staff having knowledge and skills in mitigation, and rehabilitation rated 3.2 as well as the availability of staff specialized in D/CRM rated 3.2, respectively. The availability of staff specialized in D/CRM was, however, more confined to organizations having expatriate staff but with rather few specialized nationals and locally trained staff.

#### **Inadequacies**

Several areas of capacity gaps in D/CRM were identified including having few staff members qualified in D/CRM rated 3.0. This suggests the need to have more staff in various organizations to be trained and qualified to undertake specialised D/CRM interventions. In addition, the study revealed lack of appropriate trainings for personnel to undertake D/CRM programme implementation. Moreover it was mentioned that the training institutions in the country do not offer specialised training courses in disaster and climate change risk management. Another area of gap was the lack of availability of appropriate equipment e.g. weather forecasting equipment, and various health facilities lack diagnostics tools, these affect disaster and climate change risk interventions during various phases of disaster.

#### **Action Points**

- There is need for specialized professional courses on D/CRM (preparedness, mitigation, response and rehabilitation/recovery);
- There is need to provide specialized short courses including GIS, CCM/A, search and rescue, contingency planning, early warning system, HVCA for D/CRM practitioners; There is need for strategic alliance/engage with institutions of higher learning to coach and mentor D/CRM practitioners;
- Provide opportunity for D/CRM practitioner for exchange learning visits;
- Provide opportunities for experts on D/CRM/Guest speakers to share experiences; Establish
  curriculum for D/CRM from Primary to University level education/training; Provide career
  guidance to entice and encourage students to specialize in D/CRM; and Motivate existing staff in
  D/CRM e.g. through provision of equipment, sponsorships, short courses, awards, and financial
  awards.

# 4.5 Crosscutting Issues relating to D/CRM Capacity

Under crosscutting issues, coordination was rated highest 3.5, followed by resource mobilization rated 3.3 and information system management rated 3.3 respectively. However capacity was considered low in the following areas - availability of equipments, engendering D/CRM, and sustainability planning for D/CRM.

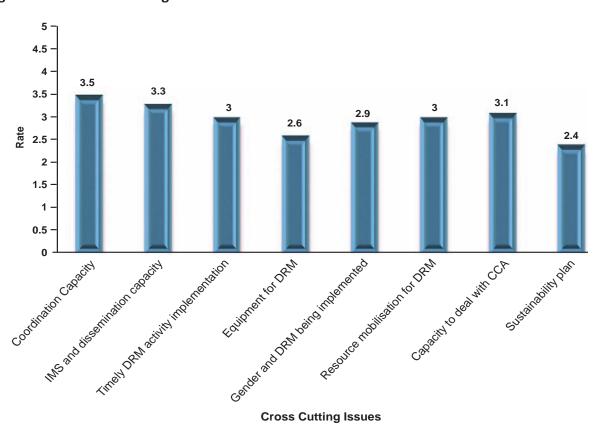

Figure 10: Cross Cutting Issues

#### **Strengths**

The study has shown that under cross cutting issues, stakeholders have reported having capacity for Coordination rated 3.5, Resource mobilization rated 3.3, and Information system management rated 3.3. Availability of capacity for coordination within various organizations is expected since in the field of D/CRM, coordination of activities is a critical activity and all stakeholders participate in various coordination meetings. It also enhances achievement of the goals of D/CRM. Similarly, all stakeholders have to look for resources (financial) hence resource mobilization is a vital skill that staff in organizations must have in order to enable their organizations implement activities in the field

#### **Inadequacies**

At the organizational level, inadequacies were reported in the areas of establishment of sustainability plan for D/CRM rated 2.4, availability of D/CRM equipment rated 2.5 and mainstreaming of Gender into D/CRM rated 2.9, respectively. The lack of sustainability plans for D/CRM within stakeholder organizations reflects the fact that most of the organizations are working in emergencies and lack sustainability and long term exit plans. It is vital that organizations draw plans for sustaining the interventions/activities that they are undertaking in the various settings for the good of the communities they serve. The lack of mainstreaming gender into disaster and climate risk management is a gap that was mentioned by several stakeholders. This is due to several factors including availability of policy and personnel within various organizations. Finally as discussed earlier, the lack of equipment for D/CRM activities hampers effective response. There is need to plan for and secure appropriate equipment in the field.

#### **Action Points**

#### Equipment

- Needs for government and stakeholders to invest in equipment for preparedness and response
   Earth moving, GIS and Ambulance services for emergency health services delivery; and
- Allocate budget at national and district levels to acquire appropriate equipment periodically (at district level through the district development plan).

#### ■ Gender

- Mainstream gender in D/CRM planning, implementation and monitoring across all levels and by all stakeholders;
- Ensure there is a gender focal person at national, and community level to specifically deal with gender related issues;
- Allocate budget for gender government and development partners; Train D/CRM practitioners in gender mainstreaming; and
- Research on gender and disaster and climate risk management.

#### Sustainability

- Government and development partners should ensure availability of sustainability plans in any D/CRM project or programme;
- Work with local government in implementing and monitoring projects/programmes to ensure sustainability;
- Work with communities in implementing and monitoring projects/programmes to ensure sustainability; and
- Ensure/design exit strategy in any D/CRM projects and programmes.

#### ■ Climate change adaptation

- Training in CCA/M;
- Budget for CCA/M;
- Operationalise and popularize CCA Policy at all levels- national, district and community level;
- Improve coordination of CCA activities;
- Strengthen community structures for CCA to build community resilience; and
- Support research in CCA/M.

#### Resource mobilization and timely implementation

- Early preparedness in terms of human resource finance and equipment;
- Budget allocation for early preparedness and early response;;
- Need for emergency funds, readily available without any red tapes bureaucracy; Specialized staff on standby for emergency response 24/7; and
- Motivation for staff working in emergencies.

### 5.0 Lessons Learned

Several issues were mentioned as critical for effective D/CRM by the various stakeholders.

#### **5.1:** Preparedness is key to disaster and climate risk management:

Early preparedness and early response save lives and money as well. It is more costly to respond to disasters than to prepare.

#### **5.2** Empowering local governments:

Disasters are local. Hence response if well conducted by local people/communities is quicker, rather than waiting for central government response which may take time. It is therefore prudent to empower the local communities in disaster prone areas, and ensure they are equipped to handle emergencies in their own settings.

Therefore, community-based capacity building is essential and should be embarked upon.

#### **5.3** Coordination is essential to D/CRM:

Coordination is critical in D/CRM interventions as it contributes towards cost reduction and minimising duplication of services .

#### 5.4 Partnership is important in D/CRM:

It was also emphasized during the stakeholder meetings that partnership is critical in D/CRM to generate synergies and strengths from other organizations. For example, those weak in preparedness may be strong in response, or in rehabilitation/recovery and vice-versa.

#### 5.5 Standardization of D/CRM tools:

It was learned during the capacity assessment that working with standardized tools brings about harmonized results. Different tools may be confusing and create challenges in the interpretation of findings.

#### 5.6 Mainstreaming D/CRM:

Mainstreaming D/CRM in all government Ministries, Departments and Agencies will help a great deal in mitigating disasters in the country as many stakeholders plan for and contribute towards D/CRM. Gender issues should be clearly identified in all D/CRM activities and adaptation options.

#### **5.7** Research and information sharing:

Conducting regular researches brings in new knowledge and information towards more effective D/CRM interventions. It was noted that several organizations have done good research work, however, they have neither disseminated widely nor published their findings.

# 6.0 Challenges

#### 6.1 Human resources

There are several challenges with human resources for D/CRM. These include:

- Inadequate number of skilled human resources required for D/CRM programme implementation at various government (central and local) levels and within various implementing institutions;
- Inadequate specialized human resources for D/CRM in the areas e.g. climate change adaptation (CCA); and
- High staff turnover for those working in the area of D/CRM at ministry level.

#### 6.2 Funding

Funding present significant challenges to D/CRM implementation due to:

- Insufficient resource allocation for D/CRM as well as low resource mobilization mechanisms at various ministry and local (district) government levels;
- Political will should be made practical by parliament and Ministry of Finance through allocation of funds for D/CRM; and
- Lack of emergency funds which is frustrating the Department of Disaster Preparedness and Management to respond and coordinate emergencies in the country.

#### 6.3 Equipment

Disaster and climate risk management is affected by limited availability of equipment and infrastructure (weather stations) for disaster preparedness, mitigation and response interventions.

#### 6.4 Early warning and response

The main challenges include:

- · Low capacity of early warning systems thus leading to slow response; and
- Being reactionary than proactive in disaster risk management.

#### 6.5 Cross-cutting challenges

- Lack of D/CRM law to operationalize the existing D/CRM policy in Uganda;
- Inadequate knowledge of damage and loss analysis. For example, there has been no estimate of economic loss of Bududa landslides and Kasese floods disasters; and
- Low capacity to operationalize the full cyclic D/CRM interventions.

## 7.0 Overall Recommendations

#### 7.1 Enabling Environment Capacity

These findings suggest the need for strengthening efforts towards enhancing disaster and climate risk management by the various stakeholders/organizations:

- Integrate disaster and climate risk management in all social, economic and environmental policies and development agenda;
- Develop and ensure SOPs are used to guide actions/interventions in D/CRM;
- Strengthen appropriate and timely risk communication at national and local levels to allow effective adaptation and disaster and climate risk management;
- Increase mobilization efforts for funds towards D/CRM. Lobby for budgetary allocation within organizations for D/CRM interventions. Lobby donors and partners to raise funds and resources towards disaster and climate risks management;
- Strengthen mechanisms for monitoring and evaluation of D/CRM interventions; and
- Train more personnel to specialize in the field of D/CRM.

#### 7.2 Organization Capacity

These findings suggest the need for strengthening organization capacity in various areas:

#### Human resources capacity

• Provide graduate and post-graduate specialized training programmes within Universities to improve D/CRM interventions.

#### **Equipment and Infrastructure**

Ensure availability of appropriate equipment forpersonnel e.g. for CCA/M, response etc to improve D/CRM;

- Provide specialized IT equipment at various levels including national, districts and to organizations involved in D/CRM;
- Revamp/rehabilitate existing weather stations and build new ones in districts/regions without nearer stations and
- Emphasis be put on building climate risk proof houses/infrastructures.

#### Stakeholders

Strengthen partnerships to enhance learning in various D/CRM domains and practices.

#### Research

- Support research efforts in various relevant and topical areas that influence evidence base practice and policy development in D/CRM; and
- Establish agenda and research desk within organizations including ministries, districts, UN agencies and NGOs.

#### Contingency planning

Develop contingency plans at national and district levels.

#### 7.3 Individual Level Capacity

The findings suggest the need to strengthen individual capacity through provision of;

- Specialised graduate training for D/CRM. These courses should be provided in reputable institutions of learning and must be accredited.
- Short training courses in D/CRM. These certificate courses should address areas of gaps including e.g. contingency planning, early warning, and basic introduction to D/CRM, Hazards and Vulnerability Assessments etc.
- Capacity building in disaster and climate change risk management and empowerment should be tailored/targeted at grassroots level for community extension workers and other services providers.

#### 7.4 Cross-cutting issues

- D/CRM law: There is need for the Government of Uganda to expedite the process of enacting the D/CRM law in order to operationalize the existing D/CRM policy.
- Damage and Loss Analysis (DALA): There is need for government and development partners to begin calculating the economic loss emanating from disasters in Uganda.
- Disaster Risk Reduction Parliamentary Forum should always be engaged with the National DRR Platform meetings and be given the advocacy agenda to help them lobby in Parliament, most especially on budget allocation, emergency funding and laws related to disasters.
- There is need for research on Gender and Disaster Risk Management in Uganda to understand the gender perspectives relating to disasters.
- The Disaster Risk Management Capacity Assessment (D/CRMCA) should be extended in the near future to cover the sub national level stakeholders including the 112 districts in Uganda.
- The D/CRMCA final report should be launched and disseminated widely to stakeholders in Uganda as well as the D/CRM national policy.
- The D/CRMCA and capacity development plan should be used by government and development partners as a working paper for the next five (5) years (2014-2017).

## 8.0 Conclusions

The study has revealed several gaps and challenges in D/CRM in the country. Under the enabling environment, the domains with the most inadequacies included funding/budgetary allocation, lack of SOP and inadequate monitoring and evaluation of D/CRM interventions.

At the organizational level, under preparedness, inadequacies exits in several areas and mainly in the domain of contingency planning, early warning and human resources skilled in D/CRM; under mitigation inadequacies exist in the areas of risk transfer mechanisms, microfinance, inadequate equipment, livelihoods resilience; and under response, there is need to strengthen emergency response efforts and finally under rehabilitation there are gaps in establishing rehabilitation initiatives.

At the individual level, inadequacies exist in having qualified staff in D/CRM.

The main challenges identified in D/CRM interventions were in the areas of limited resource allocation/funding, limited equipment for D/CRM for specialised response capacities; low capacity for early warning; inadequate human resource capacities/coupled with staff turnover in institutions hence there is need to continuous training/capacity building.

Therefore the multiplicity of inadequacies in capacities suggest the need for the government (at national and local levels) and stakeholder to invest in strengthening capacities in the various domains of D/CRM spanning the enabling environment, organizational and individual levels for effective disaster and climate risk management interventions in the country.

# Capacity Development Plan for Disaster Risk Management, Uganda 2015-2020

## **Preamble**

The Disaster/Climate Risk Management Capacity Development plan was generated from the findings of the D/CRM Capacity Assessment. The capacity development plan focuses on the existing gaps within the D/CRM in the country. The plan is multi-sectoral and covers the period, 2015 - 2020.

The capacity development has been formulated based on the following assumptions; that funds will be available, that there will political will, available motivated technical staff and robust coordination by OPM to enable the implementation of D/CRM capacity development plan.

# Disaster Risk Management Capacity Development Plan, Uganda, 2015-2020

COMPONENT	KEY ACTIONS	REQUIRED INPUTS	RESULTS	INDICATORS	LEAD AGENCY	CONTRIBUTING AGENCIES	TIME FRAME	ESTIMATED COST
<b>Enabling Environment</b>	nent							
1. Standard Operating Procedures (SOP) Objective: Standard Operating	Review/develop and adapt SOP	Review/draft SOP	SOP in D/CRM	Evidence of SOP for D/CRM	МЧО	Development partners, UN agencies/ Key Government institutions/ NGOs and private sector	1 year	50m/=
Procedures developed and provided for the implementation of D/CRM	Disseminate and enforce use of Standard Operating Procedure (SOP)	Distribute and sensitize on use of SOP in D/CRM	SOP Guideline for D/CRM in place	Existence of SOP for D/CRM at national and subnational levels and private sector	MdO	Development partners, UN agencies/ Key Government institutions/ NGOs and private sector	1 year	50m/=
2. Finances for D/ CRM Objective: Generate Finances for improved	Lobbying/plan- ning/financing of D/CRM	Review/draft government budget for funds for D/CRM	Finances for D/ CRM	Evidence of Funds for D/CRM	OPM	Development partners, UN agencies/ Key Government institutions/ NGOs and private sector	5 years	500m/=

**Annex I:** Data Collection Instruments

**Annex I.I:** Questionnaire

### 1.0 Introduction

The National Platform on Disaster Risk Reduction, under the leadership of the Office of the Prime Minister commissioned the conduct of a Disaster and Climate Risk Management (D/CRM) Capacity Assessment in Uganda. The assessment is being undertaken by Makerere University College of Health Sciences, School of Public Health with support from the United Nations Development Programme.

The aim of the study is to assess the Disaster/Climate Risk Management capacity in Uganda and develop a capacity development plan for Government and development partners.

We kindly request you to give your answers to all the questions. All the information provided shall be treated with outmost confidentiality and your participation is completely voluntary. You may choose not to participate in this process, though your experiences will be very much appreciated.

Please fill in the blank spaces provided. Circle where necessary and <u>choose only one option</u> by ticking (V) in the box corresponding to your level of agreement or disagreement, following the scale of 1-5, whereby 1 is very Low scoring factor (Very Low rating) and 5 the Highest factor (Very High rating), to quantitatively measure the existing Disaster Risk Management Capacity in your organization.

### Consent

I agree to participate in the assessment

2.	Institutional /organizational level capacity								
3	3 Individual level capacity								

## Annex I.2: Key Informant Interview Guide

The National Platform on Disaster Risk Reduction, under the leadership of the Office of the Prime Minister, commissioned a Disaster Risk Management (D/CRM) Capacity Assessment. with the aim assessing the D/CRM Capacity of stakeholders in Uganda and develop a D/CRM Capacity development plan for the country. The assessment is being undertaken by Makerere University School of Public Health with support from the United Nations Development Programme.

**Qn 1:** Has your organization got qualified staff in the field of D/CRM? (*Probe: capacity in terms of Human Resources, Number, areas of specialization, and sectors*).

**Qn2:** Would you please tell us about budgetary allocation for D/CRM activities in your organization? [Probe: Proportion of budget for various categories of D/CRM activities; adequacy, main sources of funds and utilization.

**Qn 3:** Has your organization got D/CRM framework or policies to guide implementation? [*Probe: The kinds of frameworks/Policies? Is it possible to share a copy with us? The D/CRM framework is based on national policies or policies developed by your organization?)* 

**Qn 4:** What are your views about Disaster Risk Management capacity in your organization and in the country in terms of:

a) Preparedness (*Probe* Early warning system, Contingency planning and Awareness creation) (b) Mitigation(Community-based DRR, Livelihoods resilience, Environmental Resource Management, Risk transfer, etc.. (c) Response (Rapid Assessment, Emergency Response to save lives etc..(d) Rehabilitation/Recovery.(Needs assessment, resettlement etc..)

(Probe: What each of this activity in their respective categories)

**Qn 5:** Do you have a Monitoring and Evaluation mechanism for D/CRM being implemented in your organization? (*Probe: If there is a framework for M&E, budget, personnel e.t.c*)

**Qn 6:** How do you gauge your Organizational capacity to deal with Climate Change and Adaptation programming? (*Probe Current activities/projects, personnel, budget etc*)

**Qn 7:** What is your organization's capacity to conduct Hazards, Vulnerability and Capacity Assessment (HVCA). (*Probe capability of human resources, other resources including finances, logistics etc* )

**Qn 8:** Is your organization involved in any D/CRM/CCA research and knowledge management? (Probe topic/ thematic areas of research done, funding sources, partners, research outputs, location of studies etc)

**Qn 9:** What is your Organization's capacity pertaining to D/CRM in the following areas.

- a) Coordination
- b) Information management System and dissemination
- c) Advocacy
- d) Stakeholders engagement /lessons sharing
- e) Delivery of D/CRM activities timely

- f) Equipment for D/CRM
- g) Gender and D/CRM
- h) Sustainability

**Qn 10:** What challenges do your organization have regarding capacity for D/CRM? (*Probe: Challenges in various domains e.g. human resources, finances, logistics,*)

**Qn 11:** What lessons have you learnt regarding D/CRM in organiation? (*Probe: Challenges in the following areas Preparedness, Mitigation, Response, Rehabilitation/Recovery*)

**Qn 12:** What recommendations can you give to improve D/CRM capacity at national and local level (*Probe (a) at national/central government, (c) district/local level?*.

Thank you so much for your time and availing us this opportunity to discuss with you.

5. Strengthen disaster preparedness

4. Reduce the underlying risk factors

for effective response at all levels

Disaster management capacities: policy

exchange between disaster managers

and development sectors

DRR intergrated into health sector and safe hospitals

Food security for resilience

adaptation

 DRR strategies intergrated with climate change Sustainable ecosystems and environmental

Vulnerability reduction with diversified income options

Financial risk-sharing mechanisms

Public - private partnership

Recovery schemes and social safety - nets

Protection of critical public facilities

Dialogue, coordination & information

technical and insitutional capacities

## Hyogo Framework of Action, 2005-2015

Annex 6:

# Expected outcome, strategic goals and priorities for action 2005 - 2015

## **Expected outcome**

economic and environmental assests of communities and countries The substancial reduction of disaster, in lives and in the social,

## Strategic Goals

sustainable development policies and planning The integration of disaster risk reduction into

mechanisms and capacities to build resilience to hazards Development and strengthening of institutions,

The systematic incorporation of risk reduction approaches into the the implementation of emergency preparedness, esponse and recovery programmes

## **Priorities for Action**

monitor disaster risks and 2. Identify, assess and enjance early warning 1. Ensure that disaster risk national and a local priority with a strong institutional basis for implementation reduction (DRR) is a

DRR institutional mechanisms

Risk assessement and maps multi

- risk: elaboration and

dissemination

Indiactors on DRR and vulnerability

 Data & statistical loss information Early warning: people centered;

information systems; public policy

 Scientific and technological development; data sharing,

- policies and planning, sector DRR part of development (national platforms);
  - Legislation to support DRR wise and multisector
- responsibilities and resources Assessement of human Decentralisation of
- Foster political commitment resources and capacities Community participation

climate modeling and forecasting;

Regional and emerging risks

ealrly warning

spacebased earth observation

- 3. Use knowledge, innovation and education to build a resilience at all levels culture of safety and
- Information sharing and cooperation; Networks across disciplines and regions; dialogue
  - Use of standard DRR terminology curricula, formal and informal Inclusion of DRR into school
- community level, local authorities Training and learning on DRR: education
- Research capacity: multi risk; socio targeted sectors; equal access Public awarenes and media economic; application

Land use planning and building codes

Rural development plans and DRR

- and contingency plans Emergency funds
- Voluntarism & participation

Review & and exercise preparedness

response, with risk reduction focus Regional approaches to disaster

## **Cross Cutting Issues**

Gender perspective and cultural diversity

Multi-hazard approach

Community and volunteers participation

Capacity building & technology transfer

Disaster and Climate Risk Management and Capacity assessment
